A Good Belt For Wet Runs

Thoroughly Waterproof Oak Tanned

# "AMPHIBIA"

## *Made in Canada*

# Leather Belting

Despite the many substitutes offered, leather belting is still the most efficient medium of power transmission and likely to remain so indefinitely.

To drive your machines that are producing *"Made in Canada"* articles you should use **"Amphibia,"** *"Made in Canada"* belting.

**"Amphibia"** belting is made from the best hides selected for their suitability for belting. They are given a special waterproofing tannage in our own tannery under intelligent supervision.

**"Amphibia"** belting resists exposure to oil, water or heat generated by pulley friction.

When ordering **"Amphibia"** belting state where the belt is to run.

## To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

# Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

**We have the following Sawmill Machinery for sale:**

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 8-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

## FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 35 Toronto, January 1, 1915 No. 1

# Ontario's Compensation Act Now In Force

The Ontario Workmen's Compensation Act comes into effect with the opening of the New Year. Its provisions are of the utmost importance to the lumbering industry of the province, and lumbermen should make themselves as thoroughly conversant with the situation as possible. During the past year we have published a number of articles analyzing the Act from the lumberman's point of view, and reporting the course of events in connection with the passing of the Act and the arrangement for putting it into effect. Some of the points which were explained may be briefly mentioned once more. The bill provides that compensation for injury must be paid to an employee regardless of questions of negligence. The compensation is to be adjusted by a government appointed commission, the fund being raised by a tax upon employers arranged in groups in accordance with the estimated hazard in connection with the different industries. The amount of compensation is based upon certain schedules and percentages fixed by the Act, the maximum being 55 per cent. of the injured man's former earnings; which payment is to be continued during the period of disability, and if necessary for life. In cases of death, certain fixed monthly payments are to be made to the widow during her life, or to other dependents for varying terms.

Manufacturers, lumbermen, builders, etc., are placed in schedule 1 of the Act, which requires them to contribute to an accident fund in such a manner as to furnish insurance for employees, paid for by employers and administered by the commission which has charge of the carrying out of the Act.

Farmers and employers of domestic servants practically form a separate class, largely unaffected by the Act, although probably subject to it, in so far as the farmer may be considered as engaged in manufacturing. There is apparently in the bill a great vagueness in the boundary between many of the classes subject to different regulations under the Act. A farmer who happens to be taking a few logs out of his bush might be classed under the group of manufacturers, lumbermen, etc., in case his farm hand or servant were injured while taking out the logs. The injured man would thus be entitled to compensation coming from the fund contributed by this class, although the farmer had never been formerly grouped in this class. The farmer would, of course, be called upon to pay his premium, but a great number of other farmers similarly situated could not be got at unless accidents happened to their farm hands in a similar manner. Thus the large manufacturing employers would be paying for insurance to benefit these men who, to all practical intents and purposes could not be reached for the payment of the premium.

Apparently an effort has been made to overcome some of the difficulties arising out of this situation by the recent passing of an Order-in-Council placing various specified industries and lines of business under definite clauses of the Act, and excluding various lines of business from part one of the Act. According to this Order-in-Council, lumber yards (including the delivery of lumber) carried on in connection with sawmills and the creosoting of timbers are added to class one of schedule one, which already included lumbering; logging, river-driving, rafting, booming; sawmills, shingle mills, lath mills, the manufacture of veneer and of excelsior, and the manufacture of staves, spokes, or headings.

Another provision of the new Order-in-Council places lumber yards (including the delivery of lumber) carried on in connection with planing mills or sash and door factories, and the manufacture of matches and shade rollers in class 4 of schedule one. This class already included planing mills, sash and door factories, manufacturers of wooden and corrugated paper boxes, cheese boxes, mouldings, window and door screens, window shades, carpet sweepers, wooden toys, articles and wares or baskets. Cooperage, not including the making of staves or headings, is also added to this class.

An interesting clause of the new Order-in-Council is one which says that, subject to any other regulation of the Board, every undertaking which consists of work or service (for example, the delivery of goods), for which no direct charge is made and which is incidental to an industry under Part I. carried on by the employer who performs such work or service, is added to or included in the class in which such industry is included. When such an industry is incidental to an industry not under Part I. it is excluded from the operation of Part I.

From the above outline it will be seen that the lumbering industry, practically in its entirety, including the retail trade, is placed under Part I. of the Act, which requies that its employers shall contribute to a common fund, from which shall be paid, according to the provisions of the Act, and the findings of the Board, compensation to employees for injuries which they may sustain. The most important fact in connection with the whole situation, up to date, is that the rates charged to different employers, notices of which have recently been drawn up and distributed, disclose a situation suggestive of chaos in the matter of classification. Such ratings as the following are frequently reported:—A machine shop was rated at $1.50. The same rating was given to a cold drawn wire works business, and another cold drawn wire works of exactly the same character, just across the street was rated at $2. A third company carrying on the same business in the same city has been rated at 80c. Moreover, such information as we have been able to secure, up to date, indicates that this is not an accidental situation, but the general rule. The rates really indicate that the liability, as considered by the Board, is fully as drastic as the employers had feared; and that the proposal is, not merely to pay the compensation as it becomes payable, but to set up large reserves in government funds against future payments, a policy directly opposed to the chief principles upon which the employers based their advocacy of this kind of a compensation system.

In connection with this subject it is interesting to note that the lumbering industry in Ontario is already taking steps to organize for the purpose of encouraging the prevention of accidents, and that a similar movement has been started in connection with many other important lines of industry. Seven or eight industries have now secured charters with this end in view. A report of the movement for the formation of a Lumbermen's Safety Association will be found elsewhere in this issue.

# Lumber to be More Systematically Advertised

If there should arise, during these dull days, a man among the lumbermen who could set forth in a few definite words a practically certain method of inducing the consuming public to buy stocks in normal quantities, he would be heralded abroad as a man of genius. He might, as one of our contemporaries suggests, name his own salary, even choose his own employer. The difficulty in finding such men, in order to employ them is, that they do not remain as employees for any length of time; they soon join the employers.

The attention which the lumber manufacturing and selling world is giving nowadays to the problem of increasing, or even sustaining the volume of consumption is the one outstanding feature in connection with the whole industry. Trade conditions in all parts of the United States and Canada have lately been affected by a contageous fever, the symptoms of which are chiefly, anxiety about the attacks of substitute materials upon the lumber consuming public, and curiosity as to how these attacks can be met. Many prescriptions for the trouble have already been drawn up, and they have now resulted in a combined plan for holding a great meeting of representatives of all branches of the lumber trade at Chicago during the present month. Whether this meeting will pass a fine lot of resolutions and appoint some standing committees who will achieve very little in the end, or whether it will result in the creation of a vigorous institution under some such name as a Forest Products Federation (which has been suggested), which institution will conceive and put into operation a practical scheme for placing lumber before the consuming public in its well-merited light, remains to be seen. The important point is, that the great volume of discussion which has taken place upon this subject during the last few years, has developed into a concrete movement in the direction of co-operation on the part of all classes of lumbermen, with the object of finding a workable scheme for making the consumer take more lumber in the future than he has in the past. We believe that the meeting will result in agreement upon a plan for spending money to be raised from all those who are represented, upon some proportionate basis, and to be devoted to the purpose of publicity for lumber according to the methods most approved of by a special committee to be selected from among those in attendance. It will be the duty of this committee to give effect to the wishes of the lumber trade in this connection and we hope that it will be an exceptionally strong committee, for it will have to solve about the most difficult problem that has ever been presented to the lumber trade, upon the solution of which will depend a great deal of the future prosperity of the lumber industry.

The committee will have for inspiration, the success which has followed the efforts along the same lines put forth by the Cypress Manufacturers' Association, which is so well pleased with the results already secured that it recently decided to make an increased levy upon its members for advertising purposes. Other associations have followed similar plans with conspicuous success. In Canada, this movement is likely to secure considerable support. The British Columbia shingle manufacturers have already expressed their hearty accord with the movement and their willingness to share in the expense. It is to be hoped that other bodies of Canadian lumbermen will recognize that the work which is thus being planned in the United States can be rendered equally effective in Canada, and that they will give their enthusiasm and thought to assist in its success.

The public has been prompt to forget nearly everything that it once knew about lumber and its uses, and it is the belief of those who are most active in this movement that education regarding lumber will do much to revive interest in it and to increase the consumption until it approaches something more nearly commensurate with the country's capacity for production. It is along these lines that improvement of trade conditions must of necessity travel. Curtailment in production is all well enough in its way as a temporary expedient for preventing loss, but curtailment involves an increase in the percentage of overhead expenses, which eats up profit in an alarming manner. Under present-day conditions, this profit has been reduced to the vanishing point and consumption must be stimulated if we are to avoid extensive loss. The method under consideration is one which has worked successfully in connection with practically every other form of industry and there is no doubt that if it is applied to the lumber industry in a persistent and business-like manner its results will be encouraging and worth the effort.

# Personality and Alertness in Salesmanship

Talking of present trade conditions and their importance from the salesman's point of view, a few days ago, a wholesaler told a little story to illustrate a humorous situation which he had come across. In addition to its humor, however, the story was illustrative of something of more importance to the trade. It contained, in fact, a little sermon regarding salesmanship which is too good to be lost. A transaction was under discussion between this wholesale salesman and a large consuming firm which was in need of a certain class of stock to be used in the manufacture of a product much needed by the War Office in Great Britain. The salesman had a sufficient quantity of this stock of specially good grade, and it was rather scarce stock elsewhere. The transaction depended solely upon prices and the two parties were within a small amount of agreeing upon this point. After a little further discussion the consumer invited the salesman to take a couple of dollars off his price, by way of a patriotic contribution. "This is a patriotic affair to some extent," he said, "and you should let the War Office have the benefit of your contribution." For the moment the salesman seemed to be in a quandary, but he was a man of considerable experience in the handling of difficult selling propositions and he came back with the following reply: "that is a good suggestion all right, and I am a good patriotic Canadian, but you know I really prefer to make my contribution direct." The answer was a simple enough one apparently, but it changed the situation between these two men and the sale was made at the salesman's price, after both parties had enjoyed a good laugh.

One may take several meanings out of the reply of the salesman, but knowing him, as we happen to know him, there is only one meaning to be had, namely, "our goods are the right quality and we do not need to cut the prices in order to make a sale. When it comes to a question of patriotism we are as loyal as the next man and are doing our share in connection with the promotion of patriotism in our own way without any desire for advertising our generosity. Moreover, we know that you will get the best possible value for your money if you buy this stock." It seems like a great deal to have said in such a small sentence, but it was all there, and was put so pointedly that it left nothing further to be said.

The greatest asset in connection with the equipment of the salesman is illustrated in the above incident. He must be quick to seize upon the exact moment and the exact remark to clinch a deal, and in doing so he must seek each fleeting opportunity for displaying the elusive quality known as "personality." It is alertness that enables one to make a deal and it is "personality" that enables him to impress his customer in such a manner that the deal may more easily be followed by other deals in the future. There is nothing so highly appreciated by the important purchasing consumer as these elements in the salesmen who call upon him. The one man who stands out in this manner among the long line of those who call will always be remembered, and the consumer will have a natural leaning towards him when he has in mind the purchasing of stock. If a man has to spend money upon stock of any kind he always likes to have it sold to him by a quick-witted, bright and interesting salesman. It is a natural tendency which all of us put into even the most trivial of our daily experiences in the buying of those things which we require. We naturally form a liking for a particular salesman in a store and go to him with our trade whenever possible. So it is with the salesman in the lumber business. Every consumer has his particular friends from

whom he prefers to buy; largely on account of some such incident as the one above reported. We might cite many similar occurrences to substantiate this idea, and almost every salesman could cite some case where he has not been quick enough to come out with the remark that would turn the trick.

Another interesting point in connection with this matter is the fact that clever salesmanship is not so much the result of brilliancy as of ability to size up a situation; something which can be developed by perseverance. It depends more upon a clear head than even upon experience. Every man on the road knows that the salesman who systematically keeps his head clear for business is more successful than the man who does not do so. Such a man naturally acquires at an early stage an optimistic outlook on business life, which will in itself be an additional factor in his success. In short, the whole matter of personality and its effect upon business is an illustration of the cumulative effect of persistency and conscientious attendance to work. These are the chief factors in "personality" and they can be cultivated by any man who has an ambition to do so.

# A Significant Failure of "Fireproof" Construction

One of the most remarkable fires that has ever occurred on the North American Continent and one which contains a very pointed lesson in connection with the fire-proofing of buildings occurred at West Orange, N. J., recently, when the large plant of Thos. A. Edison Inc., was destroyed. Thirty of the 35 buildings of this great manufacturing plant were completely destroyed, involving a loss which, Mr. Edison stated, would amount to $3,000,000. The interesting fact in connection with this fire, from a lumberman's point of view, is that the plant was supposed to be the latest thing in fireproof construction, as conceived by Mr. Edison himself. Twelve of the buildings, in particular, were looked upon by architects as models of fireproof construction. Nevertheless, these 12 and 18 others, out of a total of 35, all believed to be fireproof, were destroyed in a few hours, by a conflagration which became so fierce as to baffle entirely the efforts of the firemen.

Added importance is given to the lesson furnished by this conflagration by the fact that Mr. Thos. A. Edison is acknowledged to be the greatest inventive genius of the North American continent and one of the most successful inventors in the whole world today; yet Mr. Edison, standing by the blazing ruins, under conditions which induced him to express the uppermost thoughts in his mind, made use of the following dramatic lament:—"As great an inventor as they say I am, I failed to invent anything that would prevent this." In the face of such an admission of failure coming from a man of attainments so widely recognized, it seems as though the last word has been said for many years to come, in regard to the unsubstantiated claims of the manufacturers of fireproof building materials. A still further element of dramatic interest comes from the fact that practically the whole loss falls upon Mr. Edison personally. Even he, a man thoroughly conversant with the qualities of the materials which had been put into his buildings, made an error in estimating their fire-resisting nature. He carried no insurance, feeling personally convinced that insurance was not needed. "I took a gambler's chance," he said, in explanation of this, and like many another gambler he has found that the risk was infinitely greater than he estimated it to be. Fortunately, for Mr. Edison and for the great industry which he built up, he had not failed to make arrangements financially which would prevent a complete loss. He had put aside, out of the profits of the company, $2,000,000 to be used for reconstruction in case of fire. The great industry therefore will be re-established as quickly as possible, Mr. Edison having stated, while gazing at the ruins, that he intended to commence immediately upon the work of rebuilding.

It will be recalled, by many readers of the Canada Lumberman, that the Edison plant was given great publicity by the press throughout the United States and Canada, on account of the claim that it was practically fireproof. The buildings were of extra heavy reinforced concrete construction. Nevertheless, when the fire had reached its height, "great chunks of the superstructure fell to the ground to be shattered to thousands of fragments." When the fire was at last under control, at about midnight, the ruins were a smouldering and red hot mass. Such a fire is one of the most difficult and dangerous to fight. Four firemen were seriously injured and the police and firemen had the utmost difficulty in keeping the crowds of onlookers out of the wide danger zone. A feature in connection with the ruins of this plant, which is generally overlooked by people who are considering the construction of a plant, is the great comparative cost of removing the debris after the fire. Great masses of moulten and twisted metal and huge chunks of concrete cost a great deal to remove. When, apparently, they give no better protection against fire than buildings constructed largely of timber, this is a feature worthy of much attention, because the cost of clearing away the debric from a building of mill construction will be many times less than in the case of a building of so-called fireproof construction.

Knowing the undaunted disposition with which nature has endowed Mr. Edison, the fact that he has now admitted an enormous failure in regard to the fire-resisting properties of reinforced concrete construction, it will be interesting to see what kind of construction he uses in putting up his new plant.

# Editorial Short Lengths for Busy Readers

The Board of Trade of the city of Toronto held the formal opening of its new quarters on the 19th and 20th floors of the Royal Bank Building, corner King and Yonge Streets, Toronto, on Tuesday, December 29th at 3 p.m. The occasion was of special interest to the lumbermen of the city, most of whom have joined the Board, with the intention of forming a lumbermen's section. An informal reception was held by the president, Mr. W. P. Gundy and Mrs. Gundy. Music and refreshments were provided and a large number of prominent business men and their ladies attended. After the reception, addresses were delivered by his Honor Lt.-Governor J. H. Hendrie, Hon. W. H. Hearst, Premier of Ontario, His Worship Mayor H. C. Hocken, and Mr. Hugh Blain. Subsequently, the guests made an inspection of the premises, which were universally admitted to be excellently adapted to the requirements of the Board.

Dr. Alfred Thompson, member of the Dominion Parliament from the Yukon, who is active in the development of the district which he represents, makes the announcement that railway communication between northern British Columbia, Yukon and Alaska will follow the completion of the Canadian Northern Pacific and the operation of the Grand Trunk Pacific Railways. It is Dr. Thompson's belief that the next great railway to be constructed in Canada will be from a point on the Grand Trunk in British Columbia through the northern part of the Province and the Yukon to connect with the system which is to be built by the United States Government in Alaska. This will open up a vast territory in northern British Columbia and southern Yukon, and give railway communication from Sydney to the boundary line of the Yukon on the one hundred and forty-first meridian west, making it possible to take a train in Vancouver and ride to the shores of Bering Sea. This will make an empire tributary to the cities of British Columbia, with Vancouver as the railway and commercial centre. The Yukon has large areas of fine agricultural land, and the gold production of the territory for the last year is estimated at $6,000,000. The plan of the United States Government to spend $35,000,000 in railroad construction in Alaska will give impetus to the building of connecting lines in British Columbia and Yukon, and will result in opening and developing much valuable territory rich in natural resources.

# Important Addition to Midland Mill

## Manley Chew's Plant Now One of the Most Efficient on the Georgian Bay—Compact and Well Equipped

MIDLAND, Ont., has been known for a great many years as one of the most important lumber manufacturing centres in eastern Canada. It has, in fact, occupied an almost unique position as one of those interesting places, the early establishment and growth of which have been practically the sole outcome of the lumbering operations carried on by important manufacturers. Midland was by nature one of the most suitable points upon the Georgian Bay for converting into lumber the vast invaluable timber resources of the great Georgian Bay district .

Prominent among others who have taken a leading position in the production of lumber at Midland, and have been responsible for much of the subsequent growth and prosperity of the town, have been the Chew family, of which Mr. Manley Chew is the present-day representative. Mr. Manley Chew's mill at Midland is now one of the most efficient and complete upon the Georgian Bay. During the past year he has made many important additions and improvements to the plant, so that it now stands in the front ranks of the many splendid mills in this district. The accompanying illustrations represent the mill as it stands to-day and show that it is compact and well equipped with yarding and shipping facilities. The history of Mr. Manley Chew's mill at Midland goes back to 1899 when mills were erected at this point by Geo. Chew & Son, Midland, the company being composed of the late Mr. Geo. Chew, and his sons, A. G. Chew and Manley Chew. Mr. Manley Chew has now been the sole owner and manager for the past thirteen years.

### The Mill and Equipment

The present mill building is 65 x 125 ft., with a new cement boiler house, 44 x 46 ft., which has been designed in a most modern manner with boilers fitted with Dutch ovens and fed with self feeders. In addition to the erection of the new boiler house Mr. Chew has also installed, during the past year, an additional engine, thereby making it possible to effect a considerable increase in the output of the plant. The sawing equipment includes two double cutting band saws and a gang edger, lath and picket mills and all the minor parts of an up-to-date sawmill plant. The daily output is about 110,000 feet, depending of course on the size of the logs. On some logs the mill will make a much larger production than this. The average for the past season has been about 115,000 feet per day.

The shipping facilities in connection with the mill are very complete, including both water and rail. The yards contain piling room for about 15,000,000 feet. The dock for water shipment will hold about 5,000,000 feet of lumber and 3,000,000 lath. It has a depth of water of from 14 to 30 feet. The mill gives employment to from 90 to 100 men, and Mr. Chew has also three or four camps in the woods each winter. This year, on account of the peculiar trade conditions, he has reduced his operations in the woods to one camp.

### The Latest Thing In Fire Protection

One of the most interesting features in connection with the plant

A view of yards, showing excellent shipping facilities—Manley Chew's plant, Midland, Ont.

is the excellent fire protection system installed. It includes four hydrants across the yard between the mill and where the lumber starts. Pipes are strung under the full length of each of the trams, with four or five connections. At every connection throughout the yard and under the trams, fire hose have been placed. By this means, in one minute, water can be directed against any outbreak of fire on any part of the yard. This, Mr. Chew believes, is the most efficient system that he has ever heard of..

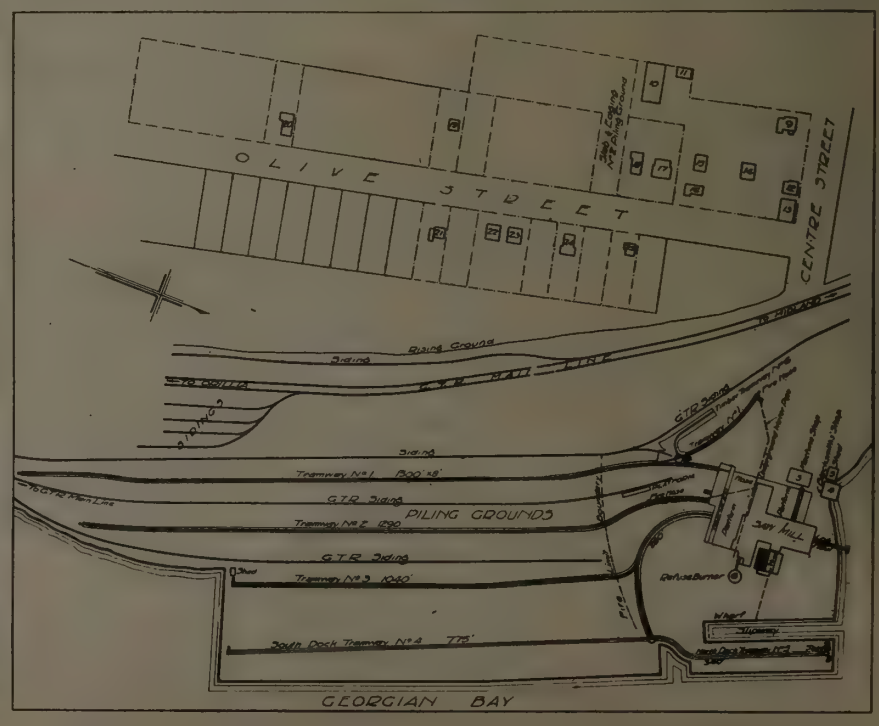
The output of the mill consists of red and white pine, 90 per cent. being white pine. During the past few years most of this stock has been sold in Ontario, but on account of the falling off in the demand during 1914, the greater part of the past year's output has been sold in the United States, in such markets as Buffalo, North Tonawanda and Detroit.

Mr. Manley Chew is one of the most prominent citizens of Midland. He is widely known throughout the lumber industry as a man of business ability and one who believes in giving all possible assistance to the promotion of the best interests of his town. Both as a business man and as a public servant he has given valuable assistance to his town and county. For the term of 1908-11 he represented the riding of Simcoe in the Dominion Parliament.

---

The season of 1914, according to the officials of the forest service of the United States, carried greater danger from fire to the national forests than any year since their establishment. To meet this emergency and to prevent great loss of public property, the amount appropriated for fire protection was all spent and a deficiency of $349,243

A leading Georgian Bay plant—Manley Chew's mill, Midland, Ont.



Plan of mill and piling grounds—Manley Chew's plant, Midland, Ont.

incurred. The conditions of drouth and other factors of forest fire hazard were said to be worse than in 1910, when the disastrous Idaho fires occurred.

The total number of fires during the season of 1914 which threatened the national forests and which had to be handled by the protective organization of the forest service were 6,112, or about 1,000 more than occurred in 1910. Of the entire 6,112 fires which threatened the national forests, 81 per cent. were extinguished by the protective organization before they had covered ten acres. The percentage of fires that burned over more than ten acres was smaller than in any previous year. A preliminary estimate shows that the loss of merchantable timber will probably not exceed $400,000. In 1910 the corresponding estimate of loss was nearly $15,000,000, but later estimates materially reduced the amount

### Duty Still Collected on Moulded or Beaded Stock

The situation in connection with the importation of beaded and moulded lumber into the United States is still in doubt, according to latest reports which have been received from Washington. In the Canada Lumberman of December 1st, we published a decision by the Board of General Appraisers of United States Customs to the effect that novelty siding and beaded lumber were entitled to free entry. The decision was to the effect that beaded lumber is produced by a planer. Therefore the claim for free entry of beaded lumber, as well as novelty siding, was maintained. Now it is reported that the treasury department has taken an appeal from the decision of the Board of General Appraisers in connection with beaded and moulded lumber, which it claims should pay a duty of 15 per cent. The Treasury Department states that pending a decision upon this question, collectors are authorized to assess a duty of 15 per cent. on novelty siding or other lumber when it is moulded or beaded.

# Lumbermen Form Safety Association

## Will Seek to Prevent Accidents in Accordance with Provisions of Ontario Workmen's Compensation Act

A meeting of a number of prominent lumbermen of the province of Ontario was held at the offices of the Canadian Manufacturers' Association, Traders Bank Building, Toronto, recently, for the purpose of discussing a proposal to form an accident prevention association, as provided for in the new Workmen's Compensation Act. Those who were present were:—D. W. Chamberlin (representing The Pigeon River Lumber Company); D. McLachlin (representing McLachlin Bros., Limited, Arnprior); A. G. Rose (representing Estate Jas. Davidson, Ottawa); L. M. Dougherty (representing Hocken Lumber Company, Otter Lake); S. C. Thompson (representing W. C. Edwards & Company, Limited, Ottawa); Frank Hawkins (representing Canadian Lumbermen's Association); W. B. Seaman (representing The Seaman Kent Company, Meaford); H. I. Thomas (representing J. R. Booth, Ottawa); Eben James (representing Trenton Cooperage Mills, Limited); W. J. Lovering (representing Lovering Lumber Company, Toronto); W. W. Carter (representing Fesserton Timber Company, Toronto); Walter C. Laidlaw (representing The R. Laidlaw Lumber Company, Toronto); A. McPherson (representing Longford Quarry Company); W. E. Bigwood (representing Graves, Bigwood & Company, Toronto); G. Shortins and Robt. Booth.

Mr. H. I. Thomas occupied the chair and called upon Mr. F. W. Wegenast of the Canadian Manufacturers' Association to explain the subject under consideration. Mr. Wegenast briefly outlined the advisability of forming a lumbermen's safety association to carry on the work of accident prevention for the insurance group under the Ontario Workmen's Compensation Act which includes the lumbering industry, and to supervise generally the interests of lumbermen in connection with workmen's compensation. Provision is made in the Act for the formation of such an association, which is empowered, if it sufficiently represents the class, to draft rules which are binding upon the whole group, and to appoint inspectors whose salaries may be paid out of the group funds collected by the Workmen's Compensation Board.

After considerable discussion, the meeting came to the conclusion that it would be advantageous to form such an association. This opinion was expressed in a motion presented by D. McLachlin and seconded by W. J. Lovering. The motion also included the names of W. E. Bigwood, Mr. Beck, F. N. Waldie, Manley Chew, W. J. Bell, Senator George Gordon, J. B. Smith, R. G. Cameron, D. McLachlin, J. S. Gillies, Gordon C. Edwards, J. R. Booth, Sir Henry Egan and W. J. Sheppard as a committee to take the necessary steps for organizing a lumbermen's safety asosciation.

It was further resolved that Messrs. McLachlin, Bigwood, Booth, Sir Henry Egan and Senator Gordon be asked to act as applicants in taking out a charter for such an association. This application has been made to the Government and states that the objects of the association are to promote and carry on the work of prevention of accidents in the industries comprised within the insurance group in the Workmen's Compensation Act, including lumbering, sawmilling and like industries, and generally to represent employers and employees engaged in such industries, in connection with the administration of the said Act. The association is to have no share capital and is not to be carried on for the purpose of gain to its members. Any profits which may accrue are to be devoted to the promotion of its objects.

The other industries which have already secured charters of a similar nature include the manufacturing of furniture, textiles, jewelry and implements and vehicles. Many other lines of industry are well on the way towards taking similar steps.

### C.M.A. Criticizes Ontario Workmen's Compensation Situation

The coming into effect of the Workmen's Compensation Act for Ontario on January 1st, and the form of the Act as amended by the Board, induced the Canadian Manufacturers' Association on December 22nd to send a circular letter to its members, dealing strongly with the subject. The circular letter requests members of the association who may have any exception to take with respect to their classification or rating under the Act to communicate with the association so that these exceptions may be combined and have more weight than they would have individually. It states that the association approved of the general scheme of having the assessment of premiums and the adjustment of claims handled by a government commission, provided that certain principles were followed which were of the utmost importance to employers. The Association had condemned the excessive scale of compensation embodied in the Act. No other Act had ever proposed to pay to injured workmen compensation as high as $22 a week for life, and no rational scheme would pay compensation for the loss of a finger in the form of a pension.

Objection is taken now also, to the plan of assessment adopted by the Board. The plan laid down by the Act was unworkable and has been abandoned. The plan adopted by the Board is considered by the association to be unjust. They had recommended a plan like that of the State of Washington, where assessments are made monthly, or at longest quarterly, with an adjustment at the end of the year, the amount of the assessment being based on the requirements as shown during the course of the year. The plan which has been adopted by the Ontario Board takes the money from employers, the association asserts, whether it is needed or not.

Strong exception is also taken in the circular letter to the classification and rating of some of the industries, which is characterized as utterly unfair. Some employers, it is said, will pay too much, others too little. The classification embodied in the Act was one which had been prepared by the Association at the request of Sir Wm. Meredith, who drew up the Act, but "only as a draft." This classification was included in the Act as presented and no opportunity was given to correct even the most glaring errors, to say nothing of redistributing the industries in accordance with the results of fuller investigation.

In some cases, the circular letter says, the rates are out of all proportion, even to the drastic liability imposed by the Act, except on the supposition that it is proposed to lay up, in the form of reserves, large amounts of money not now needed for compensation, which should be left in the industries of the country.

The circular also calls attention to the importance of employers taking up actively the work of the associations which are being formed to encourage accident prevention, and generally to represent the interest of the employers of the various groups. A report of the movement for the formation of a Lumbermen's Safety Association, along these lines is published elsewhere in this issue.

### Legitimate Business Fundamentally Sound

I am glad to be able to say that from the reports which reach me from all parts of the country, legitimate business is fundamentally sound. While trade generally is quiet, and in many branches restricted, especially those dependent upon construction work, there is compensation, in a measure, by activities in others which provide the vast supplies required by the war.

A general suspension of new undertakings is apparent. Agriculture—the backbone of the country—continues prosperous, notwithstanding a shorter crop yield, owing to the high prices being paid for grain and other farm products. The great increase in the number and value of live stock in the Northwest is especially gratifying.

Farmers are preparing to increase the average of land under crop, and manufacturers are taking advantage of the situation to extend their sales where foreign competition, for the time being, has been eliminated. There is, moreover, an undiminished confidence in the future which is an asset of no little importance.

Considerable unemployment exists, but the extent of it is probably overestimated.—H. V. Meredith, President of the Bank of Montreal.

# The Reader's Viewpoint on Trade Topics

## United States Lumberman, a Former Canadian, Criticizes Canadians for Their Failure to Appreciate Birch—A Question of Grading

### A Former Canadian's Views of the Birch Question

Editor Canada Lumberman:

I am somewhat interested in your articles regarding birch, and particularly in the statement of the Canadian manufacturer who says that "no reputable wagon manufacturer in the United States uses birch in his wagons, nor would any Canadian manufacturer, in the manufacture of his wagons, THINK of using birch."

Possibly a Canadian who is in the wholesale lumber business in the United States would have opportunities for learning things which neither the Canadian wholesaler whom you quote, nor the Canadian wagon manufacturer would have opportunities of learning, and so I am going to tell you a few things, to be used if you see fit, in the discussion of the subject in hand.

I venture to say that there are more birch hubs made than any other kind, and a hub is a very important part of the vehicle. There are some oak hubs made, and in the south they use some locust and gum for hubs. The locust is very good, but the gum is useless. I have no doubt the Canadian manufacturer who would not THINK of using birch in his wagons has used many birch hubs. The fact that birch is used extensively for the hub shows conclusively that it has the necessary strength and durability.

People who are accustomed to working up birch in connection with oak and other hardwoods, know that birch is much stronger than maple, because of the fact that maple splits easily; and for the same reason it is superior to a great deal of oak so far as the strength is concerned, and it is just as durable as oak; in fact more durable than a great deal of the oak that is now on the market, because of the fact that most of the oak which is produced in these days is cut from timber which was felled while the sap was in the timber.

The Canadian wholesaler who states that enormous quantities of birch for dump wagons is used in the United States, knows much more about it than the Canadian manufacturer who does not THINK that anyone would use this kind of wood. It seems to me that the great trouble with the Canadian manufacturers is that they do not THINK. They let their competitors do the THINKING and get away with the business that they should have.

It may interest your Canadian manufacturer to know that the United States manufacturers use many other kinds of wood besides oak and hickory. Quoting from his letter he says, "I know that dump wagons are built in New York State, and as far as I know they may be using birch in the boxes." I happen to know that spruce is being used in these boxes and what is more, it is Canadian spruce that is being used; so this U. S. A. manufacturer buys Canadian spruce right under the nose of the Canadian manufacturers, makes the wagon of it, and sells it in Canada, thereby taking business away from the Canadian manufacturer who "does not THINK, etc."

I know of another manufacturer of wagons who is using maple for his boxes which is not nearly as good as the birch. I know of another concern using wormy oak to make the felloes of, and these people have quite a trade in Canada.

You know a little paint will cover a multitude of sins when it comes to concealing imperfections.

About the time that P. T. Barnum's favorite elephant "Jumbo" was killed by the cars of St. Thomas, Barnum made the remark that the people loved to be humbugged. I do not know whether he referred particularly to the people of Canada or not, but I thought many times that the term applied very well to Canadians who love to be humbugged by the United States manufacturers when they can get much better goods at home.

In birch the Canadian manufacturers of wagons or other articles have an excellent material which can be used for any purpose where strength is required, with as good results as any wood that grows, except, possibly, hickory. Your wagon manufacturer also says that the boxes are made of poplar, cottonwood or gum, and that "there is not a wagon manufacturer in the United States or Canada who would THINK of using anything other than these five woods." This, of course, includes the oak and hickory before mentioned.

There is plenty of room for the Canadian manufacturer to do some THINKING in connection with his boxes also. A person who is thoroughly familiar with gum would not accept a wagon box made of it, as a gift, because it rots in about a year and splits and warps, so that it would be soon necessary to get another box.

Cottonwood and poplar are all right as far as they go, but why pay high prices for poplar and cottonwood when there is plenty of white pine that can be used and which would cost less money and make a very much better box. There is no wood more durable than white pine and if the wagon manufacturers began to demand it for boxes the manufacturers of pine would soon put up a grade suitable for the purpose. All they want is sound stock, similar to a No. 2 barn as graded in the Tonawanda market. The knots after being treated with shellac can be covered nicely with paint and it will make better boxes, produced for less money than poplar costs; besides, the money spent for the material to make the boxes is spent at home, where it will do the most good, instead of being sent out of the country, thus helping to make the country poor.—Ohio Lumberman.

### No Trouble Necessary in Hardwood Grading

Editor Canada Lumberman:— Toronto, Ont., Dec. 4th.

Being wholesalers and manufacturers of Canadian hardwood lumber Mr. Campbell's letter in your December 1st issue has great interest for us. We are free to admit that there are some concerns on both sides of the boundary line who do not ship straight grades. I believe, however, that through the efforts of the National Hardwood Lumber Association this situation has been greatly improved. If Mr. Campbell will study the set of rules for grading of hardwood lumber as prepared by the National Hardwood Lumber Association I am satisfied he will find them fair to both consumer and producer. Then if the purchasing agent of any concern when placing an order for lumber will specify the grade he is purchasing on his order and note "National Hardwood Lumber Association rules to govern," he can have no trouble. There are a number of Canadian concerns using these rules of inspection who are fully as well situated to supply lumber on grade as any American concern. Our own firm are marketing at least sixty per cent. of our lumber in the United States, in competition with other American lumbermen, and we find no difficulty on grade questions there.

If the consumer of hardwood lumber in Canada will let it be known to the trade that he is buying on a standard grade and mark his orders that way, he will soon find that his grade troubles were of his own making.—Edward Clark & Sons, Toronto (A. E. Clark).

---

### The Boot Now on the Other Foot

A correspondent of a United States lumber trade journal, discussing trade conditions makes the following reference to matters which will interest some of our Canadian readers:

So far as stocks are concerned we are now making a canvass of the stocks on hand November 1, 1913, and November 1, 1914. We are making a personal canvass of all the mills in Washington and Oregon so as to have this as nearly accurate as possible. We believe this report will show less lumber on hand to-day than a year ago, and in addition to this, as you well know, the stocks in the hands of the retailers are probably the lowest in years, and as the farmers have harvested perhaps the largest crop in years and are getting the highest price ever received, it means that as soon as the spring opens there is going to be an increased demand for lumber, and I believe before April or May, the mill will be able to run to capacity providing they curtail between now and that time.

I have personally been making a canvass of the Washington manufacturers, trying to persuade them not to sell lumber for future delivery at present prices. I have succeeded in creating considerable interest and I hope the manufacturers of yellow pine will follow the same course. There is absolutely nothing to be gained by contracting for future delivery at present prices which are the lowest in twenty years, and there is everything to gain by taking a chance on the market advancing, as it will undoubtedly do after the first of the year, and I hope the manufacturers in the U. S. will be wise enough to hold their stocks until they can get somewhere near the cost of manufacture and not load up with a lot of cheap orders.

Referring to imports of lumber and shingles into the United States from Canada the same writer says: "Almost the entire output of the sixty-one shingle mills in British Columbia is being shipped into the States and every mill is running full time, and a great many of them running nights—which means that sixty-one of our mills must close in order to provide a market for the British Columbia shingles; and at the present time I doubt if 40 per cent. of the mills in the State of Washington are being fully operated. We are selling shingles at less than the actual cost of manufacture and at the lowest prices in effect for more than fifteen years.

"The importations of lumber for the first six months of 1914 were ten times as much as for the entire year of 1912, and they have hardly started to work up a market in this country. This opening up the United States to British Columbia lumber and shingles, is in my opinion, one of the most serious things that the lumber manufacturers will have to contend with in the next two years or more."

# Counting the Cost of Lumber

Contributed specially to the Canada Lumberman by E. H. Newton

A CRITICAL CONSIDERATION OF A SERIOUS MATTER IN THE B.C. BUSINESS SITUATION.

"To everything there is a season, and a time to every purpose under heaven."—Ecclesiastes 3,-7:

In addressing this letter to the Canada Lumberman, and through it to the British Columbia lumbermen, the above text seems indispensible. If the author above quoted left evidence of having had any claim to distinction among the men of his day, it is the evidence that he was a philosopher. Then in the 4th verse he tells us there is a time to "weep," and a time to "laugh." Again in 7,-14 he tells us "In the day of prosperity be 'joyful,' but in the day of adversity 'consider.'"

This then, is our day in which to consider: We have had our "joyful" day, and whether we have made the best use of it or not is a matter for each one to ponder over and settle for himself. Of one thing though, no room is left for doubt; if retribution has not been swift, it has been sure. Let us "consider" therefore, and "weep" too, if it will do any good, for we are told there is a time for both, and this evidently is the time in our case; but when we are done let us not continue to go on in sackcloth and ashes, but let us rather get busy and see if something cannot be done in the way of working out a better system than that upon which we have been working (if indeed we may presume to lay claim to having had a system), whereby we might know absolutely, and beyond any shadow of a doubt, what it is costing to produce lumber in every grade and form, and thus be able to let each part of the order be self-supporting, or as nearly so as the circumstances will allow, but always with certainty, and not do as has been done so often in the past—either work in absolute doubt and darkness, or with a feeling that we may be losing money on one part of an order, but that we will probably make it up on the balance of the order. This kind of reasoning is particularly applicable to common and low grade stock, and I know that this is a mighty hard problem to try to solve, as there is so much of this kind of lumber between us and the market; but at the same time, I believe that if each individual manufacturer knew; not by a guess, or by supposition, which, in the circumstances is almost sure to be wrong, but knew absolutely by a perfected and indisputable system applicable to his own works, and not borrowed from another where things may be different, just what it costs to put lumber through the different channels from the time it leaves the boom until the shipping bill has been signed, there would be less business handled at a loss, and consequently less disappointment and less "weeping."

### Sharing Things With Your Neighbors

We all know that in time past we have been approached by some of our more enterprising neighbors, who in their anxiety to please perhaps, had loaded up with more than they were able to handle—more business I mean—and perhaps too when it was too late, discovered that their anxiety had cost them dearly. They come to us, as of course a good neighbor will do when he has something to share with another neighbor, and they wish to divide their good fortune with us, but they carefully try to conceal the fact that they are scared. If we hesitate upon the ground that the price seems too low (seems, mind you I said), we are told that the order is a very desirable one, which of itself may be a truth, not considering the price, but that they are not able to get the whole order out in time, and that is the only reason why they are trying to dispose of a part of it. Being in the position of doubt as to whether it can be handled at the price, we reflect that if they can handle their part of it, "surely" we can handle the part that they wish us to take, and by this method of "knowing" much business has been handled in the past. Then you know there is a sort of feeling in the breast of most of us, call it what you will, for present convenience I call it false pride (though that is not the right name), but call it what you may, it causes us to hesitate at a time when we should not, and sometimes do things of doubtful prospect rather than act upon the dictates of our better judgment, fearing it may be, that if we refused our beneficent neighbor he might question our judgment, or perhaps consider us antiquated both in ideas and methods; when in all probability exactly the opposite would be the case, for in such cases our judgment is more likely to be questioned by our acceptance than our refusal; for if our neighbor has come to realize his folly in having accepted the business, he is not likely to be convinced of our wisdom when we "fall" likewise as he did. Of course he does not admit any possibility of losing, and this open display of confidence almost puts us to shame, and likely has the effect upon us that he intended it should, and who will condemn us? With such bidding as this, how can any one expect to get hold of good business? It is simply a case of take what you can get, and be thankful for it. We are all sinners more or less in this respect, though not all willingly so. Much more might be said right here, but what's the use?

Of a wandering, aimless ramble,
Quite a story we could tell;
Of devious, doubtful, downward footprints;
Wanderer Stop ! ! ! They lead to hell.

With the hope that some interest may be aroused to prevent the lumber business from being dragged further down this blind trail, I have spent considerable time and given much effort in careful research and study. Having occupied positions on the coast for a number of years, as well as in the east, where I have had every opportunity of studying and gaining information, I have watched the avenues of loss and gain closely, and as a consequence I am not forced to base my calculations upon theory alone, but have confined myself to actualities, and as a result, I have the following figures to place before you, omitting small decimals. I expect that these figures will be criticized, and in fact I hope that they may be, for we cannot criticize well wthout getting down to facts and figures, and we cannot produce facts and figures without having been benefitted unless we use borrowed data, and this of course a lumberman would not do.

### An Analysis of Production Costs

"Consider" in the time of adversity, says our philosopher-friend, and if we consider this question as we should we cannot fail to be benefitted. I repeat that I hope my figures may be criticized, and that they can be proven to be too high, but if this be attempted I would ask that details of just how figures are obtained be given, so that we may be the better able to understand the facts connected with the case, because it can hardly be expected that the same figures that apply in one or two cases will apply in every case. These figures apply only to coast mills, and more particularly to mills cutting from two to three million feet per month, and running ten months in the year. I believe that they will be found too low by nine mills out of ten, in spite of the fact that we have not realized an average of $16.00 per M. for the product.

If any one can show that he can manufacture for less than these figuers indicate, then his position is an enviable one, and I am sure he will be listened to with interest. When he comes to dig around though for his details of costs, he may find things which he has classed as minor, which really have more to do with a cost sheet than he ever imagined. What could be more reasonable to expect than that each part of the lumber business—each line handled—should at least bear its own costs, and who is to blame if they do not?

It's a long way to Tipperary, an' faith an' it's true; but the divil the bit fudther is it by half than it is to our Picadilly in prospective of three years ago, and begorra it looks now as if we had been running backwards ever since three years before we started, an' so it does.

### A Basis of Cost for British Columbia Coast Mills*

| Cost Items | 30% | 25% | 15% | 30% | 100 |
|---|---|---|---|---|---|
| | $ cts. | $ cts. | $ cts. | $ cts. | $ cts. |
| A.—Power | .20 | .23 | .23 | .26 | .23 |
| B.—Boom and Saw Mill | 1.75 | 1.75 | 1.75 | 1.75 | 1.75 |
| C.—Saw Mill to Kilns | .... | .... | .... | .70 | .21 |
| D.—Kilns to Planer | .... | .... | .... | .50 | .15 |
| E.—Planing and Finishing | .... | .85 | .85 | 1.50 | .79 |
| F.—Sorting and Piling | .... | .... | 1.00 | 1.40 | .57 |

*In the above table of figures the first column represents 30 per cent. of

output as merchantable and lower sent direct from the saw to the cars, wagons, or barges. The second column represent 25 per cent. of output as merchantable and lower, sized or otherwise planed green, and sent direct to cars. The third column represents 15 per cent. of output as merchantable and lower, sized or otherwise planed green and piled in the yard before shipping. Column four represents 30 per cent. of output as clear or other lumber sent through the dry kilns, and then through all the other processes necessary to finish it into the various kinds that will come out of it, and then piled in the sheds before shipping. Column five gives the average cost. It will be noted that I have not figured logging in the above connection, but have considered buying upon the open market, as many of the mills do. I have put logs in at $9.50, as that is about what logs that will cut out the grades indicated can be bought for in normal times. It is a well-known fact that the above percentages do not always obtain, but that they are sometimes more or less diverted from one channel to another, but this does not hinder us from following them.

A to G represents labor only. H to P—Supplies and repairs only, with the exception that both labor and material are considered in furnace repairs, while in the item of "Overhead Charges" are included Head Office charges; Interest and Discount; Insurance on plant, stock and liability, together with the amount written off for depreciation of plant, and lumber used for repairs.

We know of course that the small mill, situated in a convenient block of timber can get logs much cheaper than I have herein figured, and as these mills as a general rule do not go very heavy to overhead charges, they are able to produce the commoner lumber in the rough at a lower cost than are the heavier, and more expensively designed mills on the coast. When it comes to our American friends though, who are similarly situated to ourselves, then I say that if it be true, as some seem free to admit, that they can manufacture and sell lumber more cheaply than we can, and at the same time make a profit while we make a loss, then I think we should learn their secret by all means, for if it be true, then how can we hope to compete with them in the open markets of the world, either at home or abroad? Some think that sentiment should play an important part for us, but sentiment as applied here is at best a kind of charity, and even if it were not, we all know how far sentiment, patriotic or otherwise is carried into business, and why should it be? Why should we not, if placed upon equal footing with them, manufacture just as cheaply as they can? I maintain that we can. There are capable lumbermen at the head of affairs in British Columbia, and it would indeed be deplorable if that were not so, but the trouble seems to be that they are in the minority, and how can they be expected to establish a system when the majority are ready to knock it to pieces even before it takes form? If, however, a cost system were followed out properly, and it can be done; so that the management could know just what the profit or loss as the case might be, amounted to on the different shipments, it might help to lessen the expense of manufacturing, and it certainly would fix a base for the readjustment of the principle of buying in competition with one another, and with ourselves.

### Competing in the Foreign Markets

Regarding Australian trade, as also any trade that may come from the war zone now or later, this is a matter which is occupying the minds of capable men already, and I have no doubt but that some scheme will be evolved whereby we can be made participants in this trade, but it will not be preferential, but only on competitive lines. I believe that capable representation should be in the field, where the conditions could be studied, and our products and facilities held before the prospective purchaser at such close range that they would see and understand that there are other people in the lumber business on this North American continent besides those of our good friends to the south of us. I believe that any representatives that might be sent should be sent by the lumbermen themselves, and not by the government. The latter might endorse the policy, if any such guarantee was deemed necessary, but beyond this, I believe the lumbermen are capable of working out their own salvation. They should at least be better able to undertake the task than any one else, and I see no reason why they would be considered as a combine, as has been suggested, for even if the Lumber Association should send representatives to those countries they would only represent the mills of British Columbia, and as long as there are others bidding against us, I do not see where the combine is. The greatest questions to be settled are, in my opinion, the questions of transportation, freights, and the profitable disposition of low grades. With these properly disposed of, I believe that business will come in good time.

That these are abnormal times, and that great stress prevails none can deny, and we meet all kinds of pessimistic individuals from the common crank to the religious alarmist, who predict all kinds of dire calamity; still, God is in heaven, the sun rises and sets as usual, and Brittania Rules the Waves. . . . . A Lady "Lumberman" summed it up thus, a few days ago in speaking of trade conditions: "We are so inter-dependent that what affects any one part of the world affects all of it." She might just as well have said that the "Heart" of the world is affected, and as a consequence the pulse is abnormally weak and very irregular. Put what interpretation we may on this, it is true nevertheless to a greater extent than many ever dreamed of. We know now where our heart is—a thing which some probably did not know before. We understand the system better now, and we know that the "Heart" is still strong, and that none of the arteries have been severed and soon we will find the pulsations growing stronger, if indeed there are not such indications already. It is our duty to be ready when the time comes.

I might mention that in the foregoing calculation I did not consider any over-run on logs, neither have I dealt with the cost of selling the lumber. My reason for this is that both are to some extent at least an unknown quantity in a sense, but the former should take care of the latter. I have asked it to do nothing more.

A Happy and Prosperous New Year to all.

## Decrease of Over Thirty-four Million feet in Montreal Exports

The following is a complete comparative return of the exports of lumber to Great Britain, the European Continent and South Africa from the port of Montreal for the 1913-14 seasons:

| | | |
|---|---|---|
| Watson & Todd Limited | 26,165,790 | 34,596,642 |
| R. Cox & Company | 11,336,151 | 18,326,191 |
| J. Burstall & Company | 6,708,937 | 8,905,256 |
| W. & J. Sharples | 6,296,006 | 13,571,128 |
| E. M. Nicholson | 5,284,731 | 7,695,305 |
| E. H. Lemay | 3,339,582 | 3,522,941 |
| Dobell, Beckett & Company | 2,677,768 | 3,527,783 |
| Cox, Long & Company | 474,818 | 1,878,741 |
| Railway Steamship Lines and small shippers | 9,117,618 | 13,795,180 |
| | 71,401,401 | 105,819,167 |
| Decrease for 1914 | 34,417,766 | |

The destination of the lumber was under:

| | Feet B.M. |
|---|---|
| South Africa | 1,543,053 |
| Great Britain and Continent | 69,858,348 |

During 1913 101,543,392 feet were sent to Great Britain and the Continent; 4,011,701 feet to South Africa, and 264,074 feet to Australia and New Zealand.

## Lachine Canal Shipments of Lumber, Pulp, etc.

Official returns of the traffic on the Lachine Canal for the past season indicate a considerable decrease in the lumber trade with the United States. The total from Ottawa, for United States ports, by American canal boats was 14,368 tons, or 8,620,800 feet board measure, as against 23,311 tons, or 13,386,600 feet in 1913. One hundred and seven rafts with 5,000 lineal feet of lumber each, totalling 535,000 feet in all, went through the canal. There were also 15 rafts of square timber comprising 354,722 cubic feet. The trade in pulpwood and pulp shows a decrease of cargoes to Canadian ports and a very large increase to United States ports. The pulpwood up the Canal to the former totalled 22,740 cords, a falling off of 1,702 cords, while that to American ports going up the canal was 119,651 cords, a gain of 17,155 cords. With regard to pulp, 1,600 tons were sent up to Canadian ports, a decrease of 1,131 tons. On the other hand, 36,012 tons was sent to American ports, which is 25,643 tons above 1913. The net increase in pulpwood shipments through the canal was 15,453 cords and of pulp 24,512 tons. The largest cargo tonnage to western points was in pulpwood and pulp, this being 464,785 tons—the combined total tonnage of these two commodities through the canal.

## Reduction in Cut On Upper St. John

Reports from Van Buren, Me., late in December, stated that the total cut on the Upper St. John River in Maine during the present winter will be about 25 per cent. less than it was a year ago. Compared with the average cut it will be far below normal. In past seasons, over 100,000,000 feet has been taken from this section during one winter. During the present winter the total will probably be a little less than 40,000,000 feet. Operators commenced work later than usual this fall, but have had excellent weather for cutting and yarding. Labor is plentiful and wages are from $3 to $5 per month lower than a year ago. Woodsmen are getting from $26 to $32 a month. In past seasons they have been paid from $32 to $38 a month. The amount of lumber going from this section into St. John market will show a decrease of about 25 per cent. as compared with last year. Among the operations being carried on in the State of Maine on the Upper St. John waters are the following:—

Arthur L. Noble, of Fredericton, N.B., on the Upper St. John above Seven Islands, 6,000,000 feet for the St. John market, going to Stetson, Cutler & Company.

Albert M. Currier, of Seven Islands, Me., on the St. bohn River, 7,000,000 feet, for the St. John market, to Stetson, Cutler & Company.

Flavien Chouinard, of St. Pamphile, Que., on the St. John River, 3,000,000 feet, for the St. John Lumber Company, Van Buren.

Nazaire Pelletier, of St. Francis, Me., on the St. John River, 1,-

500,000 feet for the St. John market, to Stetson, Cutler & Company.

Charles E. Jones, St. Francis, Me., on the Little Black River. 4,000,000 feet for the St. John Lumber Company, Van Buren.

W. H. Cunliffe's Sons, Fort Kent, Me., on the Allegash River waters, 7,000,000 feet, for the St. John market, Stetson, Cutler & Company.

Joseph T. Michaud, Houlton, Me., on the Allegash River in the vicinity of Long Lake, 5,000,000 feet for the St. John Lumber Company, Van Buren.

Robert J. Potts, Hartland, N.B., on the Allegash River, 5,000,000 feet for the St. John Lumber Company, Van Buren.

Alan E. Hammond, who erected a large mill at Van Buren, is cutting about 5,000,000 feet on the Fish River waters for his mill. Mr. Hammond also has operations in northern New Brunswick on the line of the International Railroad, hauling to St. Leonards, N.B., opposite Van Buren, on the St. John River, by rail, and thence across the river by log-hauler to his plant.

## Will Form a Forest Products Federation

The mass meeting of lumbermen called by the National Lumber Manufacturers' Association at Chicago on December 17th was largely attended. A great deal of discussion took place and a number of interesting addresses were delivered, all of them having a direct bearing upon the importance of taking steps to educate the public more extensively in the proper use of lumber and forest products. A committee was appointed to prepare a plan of organization and brought in a resolution which was adopted, to the effect that a mass meeting of lumbermen representing associations of all branches of the trade, and of like interests, should be held in Chicago to form an organization to be known as the Forests Products Federation, whose purpose should be to educate the public in the proper use of lumber and forest products; also that a committee of five should be appointed to have charge of preparing a programme for a mass-meeting, with power to appoint a secretary and sub-committees to prepare information and data for the general meeting, and to invite individuals to make addresses.

After this resolution had been passed, a discussion took place as to the date for holding the meeting and it was finally decided to select Wednesday and Thursday, February 24th and 25th.

The Committee of five, named by the chairman in accordance with the above resolution, was as follows:—

R. H. Downman, New Orleans, La., president National Lumber Manufacturers' Association.

Gordon C. Edwards, Ottawa, Ont., president National Wholesale Lumber Dealers' Association.

L. W. Crow, Chicago, president Lumbermen's Association of Chicago.

Julius Seidel, St. Louis, Mo.

J. R. Moorehead, Kansas City, Mo., secretary Southwestern Lumbermen's Association.

## Hardwood Manufacturers' Meeting January 28 and 29

The annual convention of the Hardwood Manufacturers' Association will be held at Cincinnati, Ohio, on January 28th and 29th, and a large attendance is expected. The programme makes provision for a general discussion of business conditions in which all will participate. There will be no resolution passed, or concerted action taken, the idea being to develop a free and open discussion of the situation so as to bring out individual views. An address upon "Cost Accounting" will be delivered by L. V. Estes, of Chicago. Chief Forester H. S. Graves will speak upon "Present Day Forest Problems" and an address will also be delivered by a well-known financial expert, upon "The New Banking Law and its Effects on General Business."

## National Lumber Manufacturers Form Insurance Departmen

An important step has been taken by the National Lumber Manufacturers' Association resulting in the formation of an Inter-Insurance Department as recommended at the annual meeting of the Association in 1914 and 1913. The new department will be known as "The National Lumber Manufacturers' Inter-Insurance Exchange" and it is expected that it will be ready for business at an early date. A committee was recently appointed by the president to inaugurate the work. This committee met recently and made the necessary arrangements. The work will be under direction of an advisory committee. Over 100 of the members of affiliated Associations have promised their support. Mr. Charles F. Simonson, Chicago, has been engaged as manager, and will occupy offices adjoining those of the National Lumber Manufacturers' Association in the Otis Building, Chicago. Mr. Simonson has had a long and successful experience in the insurance business. The members of the committee believe that the National Exchange will not cause any material competition with existing Inter-Insurance Associations, as it is evident that there is more business to be placed than all combined can carry. The influence of the National Exchange will be exerted towards the reduction of fire hazard in sawmill plants. A schedule of basis rates will be prepared as nearly on a basis of rates made by existing Inter-Insurance Associations as possible, and the business to carry its risks alone with safety. No policies will be issued until powers of attorney have been signed representing at least $2,000,000 of insurance. This amount has already been promised on approved plants. Subscribers will not be confined to members of the affiliated associations of the National Manufacturers' Association alone. Risks will be accepted upon a basis of physical condition without regard to Association memberships. The work of the manager will be under the direct supervision of the executive committee of the advisory committee.

## Lumber Insurance Company Retires

The officers of the Lumber Insurance Company of New York announce that, after the expiration of its outstanding liability, the company will be retired. The Lumber Insurance Company of New York was organized in 1904 and was merged subsequently with the Adirondack Fire Insurance Company, a company controlled by the same interests. It has a capital of $400,000. The company has confined its operations in a large part to lumber and woodworking risks, being under the control of interests prominent in the wholesale trade. Since this company was formed the extensive operations of mutual and profit-sharing organizations specializing in insurance on lumber and woodworking risks has so far restricted the demand for stock company insurance that the volume of business obtainable in the specialty in which the Lumber Insurance Company was dealing did not seem to justify the proportionately large investment of the stock-holders in capital and surplus. The Lumber Insurers General Agency which has built up an extensive connection with the lumber trade in the class of risks in which the Lumber Insurance Company has largely specialized, will continue the handling of this class of business.

## Buffalo and Tonawanda Receipts During 1914

Buffalo receipts of lumber by lake for November were 9,029,000 feet, and for the season to December 1, 66,630,000. For the corresponding period of 1913 the receipts were 108,929,982 feet. This is a decline of about 40 per cent. The receipts of shingles for November were 63,860,000. For the lake season to December 1 there were 599,295,000, as compared with 789,238,000 in the same period of last year, a decline of about 24 per cent. The lake season at the Tonawandas was closed with the arrival of three cargoes during the second week of December. The season's receipts by lake at the Tanawandas amounted to about 250,000,000 feet, which is about 72 per cent. of the amount brought in last year. In spite of the smaller receipts this year, the Tonawanda yards are well supplied with lumber, on account of light business.

## Buffalo to Become Aeroplane Centre

Buffalo is likely to become a centre for the manufacture of aeroplanes, as Glenn H. Curtis has announced his intention to locate his main plant there, and to remove the one at Hammondsport, N.Y. He has rented quarters and it is expected that a good many machinists and other expert workmen will be employed. Buffalo is regarded by Mr. Curtis as a favorable location on account of the nearness to Canade, permitting easy export arrangements; and because of the possibilities afforded by Lake Erie for trying out hydro-aeroplanes and other air machines. Plans are being made for constructing a new trans-Atlantic machine of greater size than any yet built—a new America, which will be 100 feet across the wings from tip to tip.

## Big Railway Tie Order Was a Myth

British Columbia lumbermen, especially those at Cranbrook, B.C., were recently considerbly alarmed in connection with reports to the effect that the Imperial Government had let a contract in Alabama, for 10,000 000 railway ties. In order to find out whether there was any truth in this report, Mr. R. F. Green, Dominion member for Kootenay, was requested by lumbermen and others to communicate with the Minister of Trade & Commerce in order to obtain a report upon the matter. Mr. Green received a telegram from Hon. R. L. Borden saying that he had just received a cablegram from Hon. G. H. Perley, acting High Commissioner for Canada, which was in part as follows:—"I have definite verbal assurance from the Board of Trade that no such order for railway ties has been given or contemplated by the Imperial Government. Subsequently I approached the railway executive committee. No orders have been given by them, but they state that English railway companies, in view of the closing of ordinary sources of supply, are looking around, in case necessity should arise to draw upon new terrritory. It would be well to have lumbermen forward fullest particulars available of Canadian supplies, to the secretary of the railway executive committee as early as possible."

# Providing Food for Camp Employees

## Modern Methods Used by the Stearns Salt and Lumber Company in Feeding their Employees in the Camps

In the early days of lumbering operations in Michigan, the matter of feeding the men was governed by about the same policy as governed the feeding of foremast hands at sea in the days of the bucko mate. In fact, more than one phase of handling men in the lumber woods bore a striking resemblance to their government at sea when men were shanghaied aboard outbound ships and worked within an inch of their lives.

But with the passing years the old order has changed both at sea and in the lumber woods. The feeding of men in the woods at the present time more nearly resembles the feeding of an army in war. We have made the discovery that men both fight and work better on a full stomach; but that stomach must be full of the things which build bone and muscle and furnish the energy to move them. In other words, the ration must be, as in war, a balanced ration containing the different food ingredients in correct proportion and in the most economical form.

In other days it was thought that pork and beans, "red horse," "sow belly," soggy bread without butter and muddy coffee without sugar or milk, if furnished in sufficient quantity, ought to satisfy the most exacting lumberjack. But whether it satisfied him or not, that was all he received day in and day out. No attention was given to variety or palatability. It took all the stamina of the shanty boy with his ostrich-like stomach and constant outdoor exercise in the health-giving pine woods, to survive such a diet. Now, both beans and pork rank high in food values, but when eaten constantly, day in and day out, they lose their food values through sheer unpalatability. You remember what happened to the children of Israel when they were fed on a constant diet of manna. They loathed the very sight of the God-given food and their stomachs revolted against it. The classic wager, that you can't eat a quail a day for a certain number of days was based on this idea. The shanty boy endured the deadly monotony of this unchanging diet because the resinous breath of the pine tree gave him the ravenous appetite which enabled him to do so.

The shanty boss of other days would be scandalized could he read over the menu of the modern lumber camp. It bears a wonderful resemblance to the card handed the traveller at a modern two-dollar a day hotel and, in many cases, it is far more palatable and nourishing. It conforms to the scientific idea of food values and its basis is economy. Like the ration of the soldier, it is a means to an end; it is fuel for the human engine. It is strictly balanced as to protein, fat, carbohydrates and ash, so as to secure the maximum of driving power with the minimum of weight.

The Stearns Salt and Lumber Company, of Ludington, Michigan, have introduced thoroughly modern methods in their camp food management. The accompanying illustration shows their camp quarters, all on wheels. A sample menu as used in the camps of the company shows the following as a Sunday dinner:

Cream of Tomato Soup (relish).
Roast Beef (strong in protein and fat).
Mashed Potatoes (strong in carbohydrates).
Bread and Butter (strong in carbohydrates and fat—medium protein).
Pickles (relish).
Bread Pudding (strong in carbohydrates—palatable).
Cookies.
Tea (mild stimulant).

The above is the Sunday mid-day meal filled with energizing carbohydrates and fat, and sufficient protein for the day. It is a palatable, nourishing meal and is varied from Sunday to Sunday so that it does not pall. The lumberman has discovered that the amount and kind of fuel he feeds to his human engines is just as important as the amount and kind used in the fireboxes of his steam engines. As one steam boiler may have a larger fire box than another so one man may, and often does, have a larger food capacity than another, so there must be enough. If there is any loss it is not in what the men eat—it is in what they waste. This is taken care of through instructions to the cook which are rigidly followed. For instance, if one of the men wants another helping of meat he will invariably select the largest piece on the plate, even though he does not expect to eat all of it; therefore, the cook is instructed to cut all meat into small pieces, or slices.

Before adopting the present comissary system the Stearns Salt & Lumber Company was sensible of considerable loss through waste in food. Through the waste from the tables of 125 men, twenty-five grunting, contented porkers were living in luxurious fatness and at a time when the pork market was in the dumps. This waste has been stopped to a great extent by the new system. It is the duty of one

A camp on wheels—Stearns Salt & Lumber Co., Ludington, Mich.

man to look after all come backs; to prevent waste from the tables. Every device which simplifies the work and makes for economy has been installed, such as steam coffee urns and modern hotel ranges.

In the three camps of the Stearns Salt & Lumber Company there are five cooks and fourteen helpers. The entire camp outfit, with the exception of the stables, is on wheels, in one solid train which follows the fast diminishing forest, eating into it persistantly day after day. The cars are 40 feet long, and 16 feet wide. A train consists of 12 to 15 cars and will accommodate nearly 200 men. All cars are lighted by electricity and heated by steam. A train is made up of sleeping cars, foreman's car, store, dining, cook, pump or power car, blacksmith, machine shop and filing cars.

The cook and dining cars are necessarily joined to each other and the food is served on a receiving table which passes from the dining car to the cook car from which it is taken by the waiters and passed to the men. The old tin dishes have disappeared and the men eat from porcelain. In fact, all the conveniences and comforts of a modern hotel dining room are in use here.

The fact that it requies 2,920 pounds of coffee for breakfasts only, 20,800 pounds of butter, or nearly 10½ tons, and that 80 tons of meat were purchased for use in the camps last year will give a very good idea of the amount of food consumed by the men and the chance for an enormous amount of waste which is ever present. The present system, installed by an expert, has saved the Stearns Salt and Lumber Company thousands of dollars and provided an appetizing and satisfying table for the hands.

Aside from the muscle and energy produced by this improved commissary there are other phases of the matter which are entitled to consideration. The old-time shanty boy earned an unenviable reputation for the amount of bad whiskey which he could and did consume. The whiskey of the old lumbering days seldom cost the vendor more than ninety cents a gallon and it was said that one glass of the stuff would make a jackrabbit spit in a bulldog's face. How much of the tremendous consumption of this liquid damnation was due to poor food in the lumber camps has not been scientifically ascertained but that it contributed largely to the cause can not be doubted.

The effect of good food on the mental machinery of a normal man must not be overlooked. There is nothing quite so stimulating as the knowledge that a solid and palatable meal awaits you at the end of the day. It is a spur to labor, makes for content among the men and is, after all, justly due them as a reward for a day's labor well done. A good meal softens the heart, mellows the thoughts and makes a man well disposed toward his fellows.

---

The first vessel to be loaded at Portland, Oregon, with lumber for Great Britain, since the outbreak of the war has been chartered to take on a cargo in February. The rate has not been made public. After the bulk of the surplus grain crop has been moved it is believed that lumber exports to Europe will be renewed on something like their former scale.

---

A log raft containing one million feet of cedar, said to be the largest ever floated on the Pacific, recently made the trip from British Columbia to Puget Sound. It was 100 feet long and 70 feet wide; it stood 15 feet out of the water and 20 feet under.

## The Calendar Crop for the Coming Year

The Waterous Engine Works Company, Limited, Brantford, Canada, are early in the field this year with their New Year's calendar. As usual, this company has selected a large and attractive form of calendar containing the days of the month in large type, which makes it very suitable for office use. A fine illustration of the plant of the Waterous Engine Works Company is shown, together with six small views of their products.

The River Ouelle Pulp & Lumber Company, St. Pacome, P.Q., manufacturers of spruce lumber, lath and pulpwood, have sent out a large office calendar with a handsome colored illustration entitled "A Fair Barrier." The picture is reproduced by colored photography from the original oil painting by Carl Kahler and represents "A pretty girl, a beautiful dog and a horse of mettle keen" standing at a gap in a rail fence.

The McGibbon Lumber Company, Penetanguishene, Ont., manufacturers and dealers in lumber, lath, wood, etc., have selected a very attractive picture entitled "Hiawatha's Wedding Journey" as the decoration for their New Year's calendar, which they are sending out to their friends in the trade. The picture is a beautiful colored reproduction of a painting by J. L. G. Ferris. The calendar is mounted on light red board and framed in white in a very handsome manner.

The Atlas Lumber & Manufacturing Company, Cincinnati, Ohio (J. C. West president), have sent out an attractive calendar decorated with a handsome colored photographic illustration representing a peaceful forest roadway. The calendar is tastefully mounted and will be welcome to those who are fortunate enough to be among the company's friends. A large and very practical type of office calendar has also been sent out by this company containing large bold type and decorated with a photographic illustration representing the company's band mill and dry kilns at Pickens, West Virginia.

The Wilson Lumber Company, Portland, Maine, wholesale dealers in Gulf cypress, and North Carolina pine, have sent out a handsome calendar to their trade friends. The picture decorating the calendar is entitled "The World's Highway" and is a very fine reproduction of a marine painting by John J. McAuliffe. The picture shows a full rigged three-masted sailing vessel scudding before a stiff breeze; which recalls the by-gone days of sailing vessels of this class. The coloring of the picture is very delicate and rich and the whole calendar is one of the choicest that we have yet had the pleasure of receiving.

The Campbell, MacLaurin Lumber Company, Limited, Montreal, P.Q., and Drummondville, P.Q., have again selected a large office type of calendar as a new year souvenir for their friends in the lumber trade. The figures are printed in large type and the calendar is decorated with an attractive colored picture entitled "Safe." It represents a large elk standing in the water after being chased by a pack of wolves which have come to a halt at the water's edge. The exhausted animal has at last escaped from the dreaded attacks of its enemies. The picture is conceived and carried out in a manner to convey this impression with much force.

The Fraser-Bryson Lumber Company, Limited, Ottawa, Ont., selling agents for Fraser & Company, have selected one of Philip R. Goodwin's splendid paintings of logging scenes as a decoration for their 1915 calendar. The picture is entitled "Where the Big Pines Grow." It represents a couple of timber cruisers breaking camp in the early morning. One of the men is folding up the camp dunnage while another is extinguishing the fire upon which the breakfast has been cooked. The bark canoe is close at hand in a little bay, ready for the day's journey. The picture is, like all of Mr. Goodwin's pictures, an excellent composition carried out in very attractive colors. It is handsomely mounted on white board with a buff colored frame.

## Wood Still the Principal Material

Great as the advance in fireproof construction has been during the last ten years there has been no let-up in the use of lumber, and both architects and builders find themselves so dependent on wood today that they are compelled to admit that the forests of the country are likely to be the chief source of building material for many years to come, says a recent bulletin issued by the United States Forest Service.

"The use of cement, terra-cotta, brick and stone, with a framework of steel, will make it possible soon to do away with wood entirely," is a remark often heard, and, indeed, when one stands on lower Broadway, New York, and looks up at the towering skyscrapers, the statement seems to contain much truth. As a matter of fact however, the popular idea that fireproof materials will do away with the need of using lumber in a comparatively few years is a very erroneous one. All of the various fireproof materials going into the approved construction of the more substantial buildings are used in greater quantities now than the world dreamed of a few years ago, yet the heavy demand for lumber continues.

That wood predominates is shown by the annual building records. Of the permits used for buildings erected last year, approximately 61 per cent. were constructed of wood, and the remaining 39 per cent. of fire-resisting material, according to a report issued by the Geological Survey on operations in forty-nine leading cities of the United States. These figures are the more significant when it is realized that they only represent the building activities in the largest cities. They do not take into account the construction of dwellings, stores and other buildings in the thousands of small cities and towns scattered over and not included in the forty-nine cities on which the reckoning is made.

In towns and small cities wood is usually the predominating building material and it is safe to say that, if the statistics had included figures for all places of whatever size, the percentage of wooden construction would have been much greater. These figures, as a rule, are only for the corporate limits, and the suburbs of these cities have each very large amounts to be added. The cost also, is relatively higher in these cities than in towns nearer the base of the supply.

## Shingle Exports Increase

Shingle exports to the United States from all Canadian producing districts ran heavier in September than in any previous month of the year, bringing the total for the first nine months of 1914 well up toward the billion mark and the value of the shingles exported well over the two-million-dollar mark.

The following tabulations show the details of shingle exports from Canada for the first nine months and also month by month, together with monthly and total values:

| | Shingle, Pcs. | Value |
|---|---|---|
| January | 42,706,000 | $ 99,845 |
| February | 57,700,000 | 134,000 |
| March | 81,771,000 | 195,987 |
| April | 114,763,000 | 260,084 |
| May | 116 595,000 | 267,739 |
| June | 116,761,000 | 274,014 |
| July | 114,222,000 | 270,555 |
| August | 121,109,000 | 274,706 |
| September | 130,796,000 | 276,854 |
| Total | 896,423,000 | $2,053,884 |

Other forest products imported by the United States from Canada for the month of September included 105,068,000 feet b.m., valued at $1,973,834. In September, 1913, the Canadian exports to this country totalled 95,881,000 feet b.m., having a value of $1,799,256.

Exclusive of shingles the exports of forest products from Canada to the United States for the first nine months of 1914 totalled 658,052,000 feet b.m., valued at $12,651,273. For the same months in 1913, the exports ran 647,910,000 feet, valued at $11,824,065. For the same nine months in 1912 the exports amounted to 694,462,000 feet valued at $11,882,298.

## Liverpool and Manchester Stocks

John E. Moore & Company, Limited, St. John, N.B., furnish the following report upon Liverpool and Manchester stocks on December 1st:

**Spruce and Birch**

**Month Ending, 30th November, 1914.**

**Liverpool**

| | Import | | | Consumption | | | Stock | | |
|---|---|---|---|---|---|---|---|---|---|
| | 1912. | 1913. | 1914. | 1912. | 1913. | 1914. | 1912. | 1913. | 1914. |
| N.B. & N.S. Spruce & Pine, Stds. | 1,110 | 1,570 | 2,120 | 2,390 | 2,170 | 3,060 | 4,820 | 9,140 | 6,340 |
| Birch Logs, Loads | 180 | 20 | 0 | 360 | 80 | 60 | 1,040 | 400 | 240 |
| Birch Planks, Stds. | 261 | 115 | 303 | 340 | 158 | 261 | 776 | 818 | 606 |
| **Manchester** | | | | | | | | | |
| Spruce, Stds. | 800 | 60 | 1,840 | 5,000 | 6,030 | 5,500 | 8,250 | 20,320 | 11,010 |
| Birch Logs, Loads | 80 | 0 | 40 | 20 | 40 | 120 | 500 | 240 | 740 |
| Birch Planks, Stds. | 24 | 121 | 42 | 170 | 97 | 121 | 582 | 625 | 740 |

**Stocks in Manchester and Liverpool Combined**

| | 1910. | 1911. | 1912. | 1913. | 1914. | |
|---|---|---|---|---|---|---|
| **Spruce** | | | | | | |
| Manchester | 15,460 | 16,950 | 8,250 | 20,320 | 11,010 | |
| Liverpool | 7,740 | 5,930 | 4,820 | 9,140 | 6,340 | |
| | 23,200 | 22,880 | 13,070 | 29,460 | 17,350 | Stds. |
| **Birch Logs** | | | | | | |
| Manchester | 100 | 180 | 500 | 240 | 740 | |
| Liverpool | 20 | 660 | 1,040 | 400 | 240 | |
| | 120 | 840 | 1,540 | 640 | 980 | Loads. |
| **Birch Planks** | | | | | | |
| Manchester | 491 | 145 | 582 | 625 | 740 | |
| Liverpool | 321 | 491 | 776 | 818 | 606 | |
| | 812 | 636 | 1,358 | 1,443 | 1,346 | Stds. |

Lambert Taylor, a well-known lumberman of Williamsdale, N.S., was accidently killed recently when his horse suddenly took fright and bolted. Mr. Taylor was thrown from the carriage and almost instantly killed. The late Mr. Taylor was well known throughout Cumberland County.

# The Settler and His Pulpwood

Contributed specially to the Canada Lumberman by a Northern Woodsman

FIRE CONTROL AND MARKETING COSTS FROM THE HOMESTEADERS POINT OF VIEW. PART II.

In a previous article on this subject attention was called to the fact that settlers along the line of the Transcontinental Railway are at present showing unwonted activity in the cutting of pulpwood on their lands. The question arises as to how long this activity will continue and whether, if the experiment does not prove as successful as they anticipate, the situation will not revert to that which has hitherto existed, namely, the burning of huge quantities of spruce and balsam every year, instead of its being shipped away to the mills for manufacture into pulp.

When the settler first enters into possession of his land, and surveys the enormous quantities of magnificent pulpwood at his disposal, his first impression generally is, "There is a fortune in this. There is money in every stick of timber here." To the non-practical man that is a very natural conclusion to arrive at. As it stands it DOES look to be worth a small fortune, but the settler's dream vanishes when he comes down to practical business, and finds that although at the mills the fine array of stately trees which surround him on every side would net him a big sum, yet after he has done the chopping, and paid for the cost of hauling, loading and transportation, all he gets out of it is meagre wages and nothing, or practically nothing, for the value of the material. He usually decides that it is cheaper to burn what he has chopped than to cut it into proper lengths and trim it ready for shipment.

The writer, in visiting a number of settlers in the vicinity of Cochrane recently, called upon settlers who at one time boasted of the fine pulpwood they possessed. To the question: "Are you cutting any pulpwood this winter?" they have replied with absolute glee and triumph: "Pulpwood? I haven't any pulpwood now. The fire went through it last summer and destroyed it all. It's the finest thing that could have happened. It has saved me fifty per cent. in the cost of clearing my land."

That is the general view of the settler in regard to the pulpwood question. He no longer contemplates the bush fires with dread, but hails them as a positive Godsend. Whilst the fires are actually raging he may feel anxiety concerning the safety of his shack and its contents, but if he can save his little home, and the fire travels all over his land, leaving nothing but a forest of ugly blackened tree trunks, he reviews the situation with rejoicing, and enters upon his homestead duties with a lighter heart than ever before.

One is continually hearing the remark "It is only by a series of good big bush fires that this country will be cleared and converted into agricultural land."

So long as this is the attitude of the settler, and so long as he continues to regard the pulpwood on his land as a positive obstacle to him, rather than as an asset which will help to pay the cost of clearing his land so long we may expect to find the north country ravaged by big bush fires every year. Each summer, the settlers will be setting fire to the cut timber on their homesteads. If the conflagration were confined to the limits of the particular homestead, the matter might not be serious, though even in that instance it seems regrettable that so much valuable material should be destroyed for lack of adequate means of shipping it away to the mills. The trouble is, that there is no telling where these settlers' fires end. Many homesteaders exercise every care when they start a blaze and never leave it until they are convinced that everything is safe, but, too frequently, the fire gets beyond their control, spreads beyond the limits of their holding, and travels for miles, burning itself out, no one knows where. Or if the settlers keep the flames well in check, they are satisfied everything is safe when only a few smouldering patches remain. Therein lies the danger. The writer last summer saw half the town of Hearst destroyed by a little smouldering mass, a few inches square, which, in the morning was so insignificant as to excite no attention, but which, in the afternoon, fanned by a gale of wind, assumed proportions which "all the king's horses and all the king's men" could not subdue. Too frequently it is the little smouldering patch which causes the damage, for when once a fire eats its way into the soil it is wonderful how long it will remain burning and be a menace to the surrouding bush.

An instance as to how long a small fire in the bush will remain burning: Towards the end of last October the writer passed a certain spot where he noticed a small patch of smouldering muskeg. That night a torrential downpour set in and continued for twenty-four hours, flooding the recently-cut government roads. It was a downpour such as one would have thought would have extinguished the fiercest blaze. But the day after, that little patch of muskeg was smouldering away as merrily as ever. Two weeks later the writer again passed the same point, after another deluge of rain, which, in the night had turned to snow, of which there was a sufficient depth on the ground to permit of toboggans being drawn with ease, but the little patch of muskeg was still emitting small volumes of smoke. Instances of this kind could be quoted ad infinitum.

There seems to be a need for the Provincial Government to adopt some new policy on the whole question. Their desire is, no doubt, to conserve the pulpwood supply as far as possible, and at the same time to get the land which they are selling for homestead purposes cleared as quickly as possible. They have the whole line of route of the Transcontinental Railway patrolled by fire rangers each summer to guard against fires which may be caused by sparks from the engines of contractors' trains, yet they pay no attention to the big conflagrations deliberately started by settlers. The amount of pulpwood which the homesteaders destroy annually, rather than go to the trouble of shipping to the mills, is considerable, but it is a mere bagatelle when compared with the thousands of acres destroyed by the fires which they start, and which sometimes travel many miles beyond their homesteads, to regions where there is no settlement, and where there is not likely to be any settlement for years to come.

The main thing is to get the settlers interested in the pulpwood business, so as to induce them to ship their spruce and balsam away to the mills. They need some sort of education in the matter, and the Government would do well to issue a few simple instructions as to the best methods of cutting, piling, loading, hauling and handling pulpwood generally. Few of the settlers are experienced bushmen, and adopt methods which would never prevail in a lumber camp. In the cutting of roads, for instance, they frequently show a lack of discretion, with the result that they have a road which will not permit anything like a full load to be drawn over it.

Of course, one of the greatest drawbacks at the present time is the high charge which the contractors demand for hauling the pulpwood over the Transcontinental Railway into Cochrane. When the line is in proper operation these charges will be greatly reduced, and this will afford that extra margin of profit to induce the settler to ship away his pulpwood rather than consign it to the flames. However, if the vast timber areas north and south of the railway are not to be wholly destroyed some more effective steps must be taken for their conservation.

---

## The Fuel Value of Various Woods

The fuel value of two pounds of wood is roughly equivalent to that of one pound of coal. This is given as the result of certain calculations now being made in the forest service laboratory, which show also about how many cords of certain kinds of wood are required to obtain an amount of heat equal to that in a ton of coal.

Certain kinds of wood, such as hickory, oak, beech, birch, hard maple, ash, elm, locust, long-leaf pine, and cherry have fairly high heat values and only one cord of seasoned wood of these species is required to equal one ton of good coal.

It takes a cord and a half of short-leaf pine, hemlock, red gum, Douglas fir, sycamore, and soft maple to equal a ton of coal, and two cords of cedar, redwood, poplar, catalpa, Norway pine, cypress, basswood, spruce, and white pine.

Equal weights of dry, non-resinous woods, however, are said to have practically the same heat value regardless of species, and as a consequence it can be stated as a general proposition that the heavier the wood the more heat to the cord. Weight for weight, however, there is very little difference between various species; the average heat for all that have been calculated is 4,600 calories, or heat units, per kilogram. A kilogram of resin will develop 9,400 heat units, or about twice the average for wood. As a consequence, resinous woods have a greater heat value per pound than non-resinous woods, and this increased value varies, of course, with the resin content.

The available heat value of a cord of wood depends on many different factors. It has a relation not only to the amount of resin it contains but to the amount of moisture present. Furthermore, cords vary as to the amount of solid wood they contain, even when they are of the standard dimension and occupy 128 cubic feet of space. A certain proportion of this space is made up of air spaces between the sticks, and this air space may be considerable in a cord made of twisted, crooked, and knotty sticks. Out of the 128 cubic feet, a fair average of solid wood is about 80 cubic feet.

It is pointed out, however, that heat value is not the only test of usefulness in fuel wood and since 95 per cent. of all wood used for fuel is consumed for domestic purposes, largely in farm houses, such factors as rapidity of burning and ease of lighting are important. Each

section of the country has its favored woods and these are said to be, in general, the right ones to ues. Hickory, of the non-resinous woods, has the highest fuel value per unit volume of wood, and has other advantages. It burns evenly, and, as housewives say, holds the heat. The oaks come next, followed by beech, birch, and maple. Pine has a relatively low heat value per unit volume, but has other advantages. It ignites readily and gives out a quick hot flame, but one that soon dies down. This makes it a favorite with rural housekeepers as a summer wood, because it is particularly adapted for hot days in the kitchen.

The fuel qualities of chestnut adapt it particularly to work in brass foundries, where it gives just the required amount of heat and it is therefore in favor. Coastwise vessels in Florida pay twice as much for Florida buttonwood as for any other, because it burns with an even heat and with a minimum amount of smoke and ash.

The principal disadvantage of the resinous pines is their oily black smoke.

## Ventilation of Dry Kilns

By N. Greener

The ventilation of dry kilns is one of the most important of all things connected with the proper kiln drying of lumber. Can you realize that on account of improper ventilation is 90 per cent. of the dry kilns used to-day there is 15 to 30 per cent. of the lumber being reduced in grade? You don't believe this but you will if you will do as I have done, stand by your grader on the green chain, see that he grades the lumber right and marks each piece as it should be, then you see that this lumber is stacked on the cars. Mark each car so you will know them, put them in the kilns and when they come out you stand by the grader on the dry chain and watch him change the grade mark. You will be convinced that there are conditions existing that you were not aware of. You may have brick kilns, you may have concrete kilns or wood kilns, but if your ventilation is not correct you had better not have any kilns.

Ventilation in dry kilns is somewhat different to that of the office or the home. At the office you ventilate to expel the foul air, introducing that which is pure.

In the dry kilns we ventilate to remove the moisture which is forced from the green lumber by the heat penetrating into the lumber through the pores. When the lumber is heated to the maximum temperature a portion of the water from the lumber is generated into a vapor. This vapor must be removed as fast as it accumualtes and at a point that will not interfere or reduce the temperature of the interior of the kiln. In removing this vapor or moisture, it must be replaced with air and not cold air but with air which is the right temperature to prevent the lumber from being chilled. Should the lumber be exposed to cold air you will find that checks will appear. A properly constructed ventilation system will prevent checks and the lumber will come through the kilns as good as it was before it went in them.

Some of the lumber manufacturers are figuring to get the lumber through the kilns to get the minimum weight. This is all right, but there is a limit. You can get lumber too dry. You may save 50 cents per M on your weights, but look out you don't cause the lumber to be degraded in milling, therefore losing more than you would save on the reduced weights. Look after the ventilation, have the lumber taken out of the kiln when it should come out and the weights will take care of themselves.

For several years I have been making experiments on ventilation for yellow pine dry kilns and have obtained some very excellent results, some of which I am going to give you for your information, and if any have given this matter any thought I am sure it will be of interest to them.

On the first nine cars, I give you below, each car contained 4,000 feet and on the last one 2,200 feet; these cars were perfectly dry when they were pulled out of the kilns and were not taken down for several hours after, being allowed to cool off.

One car No. 2 common, 1 x 6 to 1 x 12, pulled out after being in kiln 30 hours; in taking down and regrading, we found two pieces 1 x 6, 16 which were reduced to No. 3, temperature 240 degrees.

One car No. 2 common, 1 x 6 to 1 x 12, pulled after being in kiln 27 hours; in taking down and regrading, we found one piece 1 x 8, 16, and 1 piece 1 x 10, 16, which were reduced to No. 3 common, temperature 242 degrees.

One car No. 2 common, 1 x 6 to 1 x 12, pulled after being in kilns 30 hours; in taking down and regrading we found two pieces 1 x 12, 14 which were reduced to No. 3 common, temperature 246 degrees.

One car No. 2 common, 1 x 6 to 1 x 12, pulled after being in kilns 28 hours; in taking down and regrading we found one piece 1 x 8, 16, and one piece 1 x 10, 14 which were reduced to No. 3 common, temperature 240 degrees.

One car No. 2 common, 1 x 6 to 1 x 12, pulled after being in kilns 27 hours; in taking down and regrading we found two pieces 1 x 6, 12, and one piece 1 x 10, 14, which were reduced to No. 3 common, temperature 244 degrees.

One car No. 2 common, 1 x 6 to 1 x 12, pulled after being in kiln 30 hours; in taking down and regrading we found one piece 1 x 8, 18, which was reduced to No. 3 common, temperature 240 degrees.

One car No. 2 common, 1 x 6 to 1 x 12, pulled after being in kiln 32 hours; in taking down and regrading we found three pieces 1 x 10, 16, which were reduced to No. 3 common, temperature 238 degrees.

One car No. 2 common, 1 x 6 to 1 x 12, pulled after being in kiln 38 hours; in taking down and regrading we found two pieces 1 x 10, 16, three pieces 1 x 8, 14, and two pieces 1 x 6, 16, reduced to No. 3 common, temperature 240 degrees. This car was in the kiln at least six hours longer than it should have stayed.

One car 5/4, 6/4 and 8/4, B and Better finish short-leaf pulled after being in kiln 52 hours; in taking down and regrading we found two pieces 5/4 x 6, 16 reduced to No. 1 common, temperature 240 degrees..

On several cars B and Better kiln dried saps 3 x 6 to 6 x 12, 12 to 16 foot lengths pulled after being in kiln 72 hours; in taking down none degraded, temperature 240 degrees.

## Personal Notes of Interest to Lumbermen

W. E. Kelsey, of W. E. Kelsey and Son, North Tonawanda, N.Y., visited Toronto about the middle of December, on business relating to the purchase of stocks from Northern Ontario.

Sir Thomas Skinner, Bart., of London, Eng., has been elected a director of the Laurentide Company, Limited. He is also a director of the C. P. R. and Governor of the Hudsons Bay Company.

Mr. William Mason, of Mason, Gordon & Company, Montreal, has just returned from a business trip to the United Kingdom, partly in connection with the sale of pit props for use in British mines.

Arthur H. Campbell, of the Campbell MacLaurin Lumber Company, Montreal, spent Christmas with his father on the latter's large fruit farm at Bronte, Ont. On his way back to Montreal Mr. Campbell favored the Canada Lumberman with a visit.

Mr. H. W. Racey has resigned as general manager of the St. Lawrence Pulp and Lumber Corporation, Chandler, P.Q., the construction of whose plant was recently finished. Mr. Racey, however, at the request of Messrs. Chandler Bros. & Company, Philadelphia, will retain his connection with the corporation in an advisory capacity.

Mr. C. G. Atkinson, who recently resigned from his position as assistant manager for the Freeman-Smith Lumber Company, Millville, Ark., has taken the position of sales manager for the Stout Lumber Company, Thornton, Ark., and the Cotton Belt Lumber Company, Bearden, Ark. The two mills are modern in every respect. The Stout Lumber Company's plant is turning out Arkansas soft pine at the rate of 60,000,000 feet annually. The two mills are owned by the same interests. Their output will give Mr. Atkinson the sale of about 80,000,000 feet annually to superintend.

## Hindus Will Import Hardwood Into B.C.

With the object of importing valuable hard woods from the Punjab Valley in India into British Columbia for sale to manufactories there, a joint stock company has been formed by a number of Hindus. The leaders are Kapoor Singh, Hardit Singh, Inder Singh and Baga Singh. The new company will be capitalized at $250,000, composed of 25,000 shares of $10 each. Kapoor and Hardit Singh have returned to India to make arrangements at that end. The company proposes importing teak, mahogany, ebony, and other valuable brands of hardwood, and establishing a sawmill in India to cut the wood into square timbers to be shipped to British Columbia. It is stated that hardwood can be landed in New Westminster for $70 per thousand, and that when manufactured into the finished product as polished hardwood,

## Getting Out a Record Lumber Order

During the season of 1914 nearly four million feet of Douglas fir timber was shipped from Genoa Bay, B.C., to Toronto, for the great harbor improvements going on there. Active preparations are now under way for logging and sawing the requirements for 1915, the quantity needed for the coming year being approximately six million feet. It is gratifying to note that this large contract is proceeding satisfactorily despite the generally adverse conditions. It is estimated that upward of thirty million feet of Douglas fir will be required to complete the Toronto waterfront. The timber for the work is being furnished by the Empire Lumber Company from their immense holdings at Cowichan Lake, where the company has a log output capacity of sixty million feet and upward a year. The logs are delivered to the mill and sawn into lumber and timber at the rate of one hundred thousand to one hundred and twenty-five thousand feet a day of ten hours' run.

## Inventory Time and Its Duties

In the last week of the year, the attention of the retail lumber dealers is concentrated on the business of invoicing and everything else for the time being has a minor interest. Everybody works to his limit during these days, and the owner or manager has to bear the brunt of it in the physical and mental overtime he puts in at the work. The men unloading lumber or coal have an easy job compared with it, for when their day's work is done they go home and eat their supper and get a good night's rest. But those who are doing the invoicing, after working from daylight to dark in the yards as hard as they can, extend the day till midnight, working in the office at the hardest kind of mental labor in extending the board measure and figuring the cost prices of each item. After a few days of such grilling experience, a man feels as though something has gone out of him. Very often, too, the weather is so severe as to add greatly to the discomfort and length of time in doing the outside part of the job. On such days the man who is tallying can manage to keep going no matter how cold it is, but the one who keeps the tally has the worst of it.

To facilitate the work, preparation should be made beforehand in putting the stock in perfect order for rapid counting. The molding and battens can be counted several days previous; the coal bins and the brick piles, if these products are handled can be trimmed and counted, and several other things may be done that will shorten the time. I have gone into yards to invoice when nothing had been done of this kind and it took the greater part of a day longer because of having to straighten things out as we went along. It is not only the work of doing this, but it is annoying as well and makes the work harder in consequence. Those who are line yard managers have doubtless had this drilled into them and are ready for the auditor when he comes. If he finds the yard in applie-pie order and the stock nicely arranged for counting, it will be several points in your favor and will serve to keep him in good humor during the job. When an auditor comes to invoice a yard, he wants to tackle the work and get it back of him as soon as possible and anything the manager has done to lessen the labor and time for him is greatly appreciated for, whether you know it or not, there are few men who have a harder job for the next two or three weeks than a line yard auditor. He not only has this invoicing work to do but he has a certain degree of responsibility to account for in the returns from the yards under his supervision. He is required by the owners to look after the managers during the year and see that they obey the rules and meet their requirements. So when figuring-up time comes, he naturally feels more or less anxious about how things will pan out in the final footings of the year's work. Therefore, I would suggest to you to make it as easy as you can for the auditor in this invoicing job. You are working in the business for the owners and you will gain better results for yourself if you work with the auditor in obtaining the best results for the yard. You see him every little while but you see the owners very seldom, and they only know you by name and your daily reports. The auditor is the personal connecting link between you and them and if he is a competent man for his position, what he says of you goes with your mutual employers. You will find that his good opinion of you and your ability is a pretty handy thing to have when you make up your mind to "hit" the owners for an increase of salary, and I suppose some of you have got that idea running through your mind at this particular time. If this is the case, you too, will feel solicitous about the outcome of the year's business of the yard. This is something that the manager is not supposed to be entitled to know. There is one thing sure, however, if the results are not satisfactory, he will be more liable to know of it than if they are.

### You Will Learn Then

When you get to running a yard of your own and employing men you will understand better the attitude of a yard owner in this respect. You will feel when you have had a good year, that if you let your employees know it, it will act as an encouragement to them to try for a raise. If it has been a poor year, you don't mind letting them know, for the tendency it will have to restrain them from asking for more wages. They will be more satisfied with what they are getting and thankful if they are not asked to take less.

I consider though, that the manager of such a business as that of a lumber yard is rather more than in the position of a hired man. If he is competent and makes a success in conducting the yard, he is more of an associate in the business than the hired man with no more responsibility than is connected with his day's work. The more competent a manager is, the closer is his affiliation with the ownership of the concern. He is practically a branch of it, and being this, it is therefore natural he should feel that it was his due to be informed as to the results of his year's efforts to make the business a success. A manager of this class is a good business man and a knowledge of this encourages him to make it better. Being a good business man he will know if he is getting the salary that the business will warrant. With his ability and mastery of the business he is able to form a pretty close estimate of what the yard profits are and distinguish the difference between a large volume of business and a profitable business.

The mistake is often made by some yard managers that if they are selling lots of stuff and making a good aggregate showing every month, the profits must be correspondingly large, and they wonder why, with such a good showing every year, nothing is said to them about an increase of salary. I have had a chance to look over the yearly summing up of the results of a good many yards and seen the different percentages of profit. In a number of cases, I noted that some yards showed a larger amount of protfis than other yards that had done a much larger volume of business. I supposed at first thought, this was owing to a difference in the character of the competition. On inquiring, however, I learned that the conditions in this respect were practically the same. I've no doubt but every line yard concern has similar cases among their yards. It is illustrative of a well-known principle in business that it is one thing to sell goods but another matter to get an adequate profit. A line yard man told me in a conversation this summer that they were paying several of their managers larger salaries than they did to some who were doing a larger business. He said too, that the common fault of most managers was to make sales at the expense of profits. The manager who can roll up a good volume of sales and make good profits out of them is a man that is being sought for and can command the top-notch salary. I have spoken of these things at this time with the object of their being suggestive to you in your work of the coming year, by helping you to keep in mind the fact of your being valuable to your employers only in proportion to the amount of profits you succeed in making for them out of the business. To make profits, therefore, is a problem that is incumbent on you to study and continually watch for its application in every sale you make, for on it largely depends your business success.

### Volume, But Not Profit

I think that one of the best lessons I ever learned was along in the early '80's when I was a manager of a line yard. I had been but five or six years in the business and I had lots to learn although I didn't realize this at the time. I had what I thought was a whopping good year's trade. I was ambitious and worked hard to roll up the volume of sales and when I figured them up at the close of the year, I was patting myself on the back in anticipation of a salary raise that I had been working for. My surprise and mortification were great when one day, a couple of weeks after invoicing one of the owners came out to see me. I thought he didn't appear very cheerful and I didn't feel that way either when he informed me that although the yard had done a good business in the amount of sales last year, it didn't show much of a profit. Then he told of what some of the other boys had done and that made me feel worse than ever, for I hated like the dickens to "husk the down row" in anything. This was before the days of daily reports and so we went over the books together and I was shown the mistakes I had made in selling stuff on too close a margin and some other things I had not been aware of. It was a cold day, I remember, but I perspired in going over the work I had done. I was given another year's trial at that yard with the same old salary, and I did some hard studying during the rest of that winter and by it I got a new view of business principles that I had previously ignored because I had not understood them as I should. The result for that year was that I did about the same amount of business with a resultant profit that gave me a 20 per cent. increase in salary. I learned my lesson well and ever afterward I was among the head of the class.

From this, I have formed an opinion that every manager who is competent to be one should be intrusted with the knowledge of a fair idea of the net results of his year's work, and if he is worth anything at all as a manager, it will have a beneficial influence in his next year's management of the yard. It is not necessary, of course, to tell him the exact amount of the profit the yard has made. I don't think the right sort of a manager cares to know this, but he does care to know, whether he has been successful or not.

### Require a Change of Scene

There are many managers who are in the wrong place, for their own and employer's good and a change of position to another town would work to the benefit of both. The profits of a yard depend a good deal on the degree of harmony existing between the manager and his local competitor. In many places where there are discordant relations, it is not always so much on account of the natural competition as it is the difference in the personal temperament of the two men. They simply can't get along together becaues they dislike each other in a personal way, and when this feeling exists there cannot be any fair competition between the two. When I was working as a boy on the farm we had some horses that were always kicking and biting when hitched together, but hitch them up with other horses and they would work together in peace and harmony. and I've noticed this is a good deal the same way with humans. Met Saley used to call this the "imperfect meshing of cogs." You will understand this better, those of you who have to do with the working of machinery. I have seen several instances of shifting yard managers from one town to another which proved to be a benefit all around. I have known of two dealers who were managing yards in the same town and the two yards were

owned by the same concern, yet these two men couldn't get along together without scrapping and cutting prices to get the business. A change had to be made of course. One of them was sent to run a yard in an adjoining town where there was a real competitor. Fortunately the new man found that he harmonized with the other dealer and the two got along together without scrapping.

This is a matter which I believe should have consideration by owners of line yards in their placing of men at different places for the personal equation is something that cannot be left out of anything pertaining to business relations, and I would say to you managers who are in places where you can't get along harmoniously with the "other fellow" that you owe it to yourself to seek a change to some place where you can. If you have had a good business this year and the yard didn't pan out in profits as it should have, because of unfriendly relations between you and your competitor, something is the matter with your personal temperament. You don't like each other, as we say, on general principles and therefore the business principles in the running of the two yards have to suffer because your "cogs don't mesh." On the other hand it may be that you are not well enough acquainted in a personal way with each other. You have kept aloof and shunned meeting one another and this has had the tendency to create a false personal dislike between you. The thing to do, therefore, is to find out through closer acquaintance if you won't like him better in knowing him better. It is often the case that as we become better acquainted with a man our adverse opinion of him changes. I believe this is a common experience with us all in our personal relations with individuals. In view of this fact, don't you think that it might be well for you to give it a trial in your relations with the man over in the other yard who appears to you to be irreconcilable in his attitude towards you? It may be that if you cultivate his acquaintance he will prove to be a different fellow from what you thought he was.

### Warm up to Him

Don't you think now, if you two could harmonize better, that it would be money in both your pockets, to say nothing of the added pleasure of doing business? Well then why not be sensible and act sensibly in doing your part to make this possible? Lay aside your own pride and stubbornness of disposition and make the first move in going half way and a considerable distance on his half if need be to a better understanding of him as a man. Do it for the sake of your business if nothing else. If he is repellant in his way the first, second and third time you meet him don't be discouraged but be persistent, and in time, you are bound to thaw him out.

You may perhaps have heard of the old fable of the contest of the Sun and the Wind as to which could make the traveller take off his cloak first. The Wind had the first try at it and he blew the hardest kind of a gale but it only had the effect of making the traveller hold on to his cloak all the tighter. The Wind gave it up and subsided to a calm. The Sun then took a hand and blazed away. In a little while those silent burning rays of his impelled the traveller to unloosen and lay off his cloak for relief, you can see the moral of this without my pointing it out. I read this fable when I was a boy, and it made such an impression on me that I believe nothing has influenced me more in my handling of men.

I shall never forget either the instance, at one of our convenitons, several years ago, of a dealer telling me in a confidential way of his bringing his competitor along with him and paying his expenses to and from the meeting. He was a tight-wad, cantankerous dispositioned sort of a chap and hard to get along with, but my friend conceived the idea that his liking for getting something for nothing would incline him to accept the offer on those terms and so he came, saw, took in, and went back a different man. Some months afterward I received a letter from the wise dealer in which he stated that everything was going on nicely, and his investment had been worth a thousand dollars. You will perhaps see the moral of this too, without my pointing it out and if you choose to apply it in a similar case there is no doubt in the least but that it will pay you a big interest on the investment if nothing more.

### A Good Start for the New Year

Applying this common sense treatment that I have been talking about to those of your competitors who are not in accord with you, will be a mighty good thing for you to begin the New Year with. Just go out in the corner of the yard and dig a hole and bury your old grudges and forget them and start out on the New Year with the determination to make friends of your competitors no matter how cantankerous they may be. Get all right yourself in feeling and attitude towards them for this is the first essential thing to do and the rest is a matter of tact and patience in application. There are many ways in which you can work with a competitor instead of working against him. It used to be a common idea with dealers that no matter what a competitor was doing the thing to do was to be against him. If anything was heard to his discredit, to spread it around was the policy pursued. The idea was to down him in a social and business way wherever possible. Such a policy could result only in creating personal feelings of dislike and rancor to the serious detriment of the business interests of all the dealers in the town. When you come to look at it from an enlightened, intelligent view point it is a crude and barbarous policy and unworthy of the intelligence of to-day. The developing of a higher standard of business dealing is eliminating a good deal of this old time notion that a competitor had no business rights that we were bound to respect. Our associations have done a good deal in educating lumbermen to discard these primitive ideas, and the retail business is on a higher level in this respect than it used to be and they will do more as the work is going on in an ever broadening measure.

At the end of the year you closed your books for the year that is now but a memory. If you will turn over their pages and study them you will see many evidences of the results of being unfriendly with your competitor. There are accounts that he could have told you were risky to make but in your ignorance of this, you were pleased in taking that trade away from him. There are records of bills sold at lower figures than need have been, because the parties had lied to you about the figures offered by your competitor, when, if you had been on good terms with him you would have done differently and obtained more money for them. And you might ask yourself, "What doth it profit me in being on unfriendly terms with my competitor?" Just run over your last year's business and calculate approximately, the amount it has cost you for this. Is it wise? Is it sensible? Is it good business to continue working under such conditions when the remedy for them is as practical to apply as the cause is that produces them? If you found out that you were losing $500 a year from some other cause than this, you would not hesitate to take measures to stop it would you? Well, scrapping with your competitor costs you as much if not more than this amount of money in profits every year that you continue in this policy. In view of this, don't you think it would be worth your while to change it for one that will save you what you are now losing? I know of course there are many who read this to whom it won't apply for they are getting along with their competitors in a sensible way and saving all this loss I've spoken of, for themselves. But there are many more who have not yet learned the value, in money, of good will and forbearance towards their competitors. It is to those I am talking, and urging on them the business importance of getting rightly adjusted their relations with the man in the other yard and this holiday season is a good time to make the move to bring it about.

### Price Fixing Unnecessary

Understand, if you please, I am not suggesting any such thing as the "fixing" of prices. Dealers can work together without doing this. With a harmony of action this matter will regulate itself. You don't have to have a special agreement with a friend to keep him from knifing you and just so in this case, working together you can keep down the amount of accounts on your books. You can govern better your credits and collections. You can make it harder for the "dead beats" and make the slow pays loosen their hold on your money. You can collaborate with your competitor in creating and developing more business for you both, and the competition between you will resolve itself into an emulation of purpose as to "who best can work and best agree." The emulation in service and creating business is taking the place of the old cut-throat competition with the intelligent and progressive element in the business world, and the retail lumbermen should get into line in adopting it and throw into the discard all of the old unprofitable methods of doing business.—C. H. Ketridge, in The Mississippi Valley Lumberman.

---

Measured in terms of annual production of wealth the lumber industry both in British Columbia and in the Northwestern states ranks high above its nearest competitors—agriculture, mining and fisheries. In British Columbia of every dollar in the pocket of the wage earner, merchant or financier, 33 cents is from the forest. In Washington, Oregon and Idaho the lumbermen are still more productive—42 per cent. of the public wealth of Washington, 45 per cent. of the public wealth of Oregon and 31 per cent. of the public wealth of Idaho is derived directly from the logging camps, saw mills and other forest occupations.

It is unnecessary to state here that the wealth brought into the country by the lumber industry does not remain in the hands of the lumberman. The lumberman's dollar is one of the world's best travellers; of every dollar, 40 cents goes to transportation companies, 35 cents to labor directly employed in the industry, 15 cents to merchants for equipment and supplies, 10 cents for interest on capital invested.

The lumbermen of this forest region may pay directly each year to transportation companies $80,000,000, to wage earners $70,000,000, to merchants $30 000,000 and for the use of borrowed working capital $20,000,000. This money is later circulated into every portion of the community and forms an important factor in the livelihood of those few people who do not come into direct contact with the lumber industry.—H. R. MacMillan, Chief Forester of British Columbia, before the Western Forestry & Conservation Association.

## Methods of Billing and Factory Routine

There is to be found a great variety of methods of billing in woodworking factories, some being good, some bad and some almost worthless. In this article I will mention one or two as not being good, and will try and describe another, which I consider a good system. In connection with the billing, I will describe the system of factory routine in connection with same, says I. D. C., in the Wood-Worker, Indianapolis. As I write this, I call to mind a small mill where, up to less than a year past, there was no system of billing that insured anything like accuracy, even if one man was in charge all the time. To make matters worse, they were changing foremen and managers every two or three months. None of the owners had any practical knowledge of mill work. The senior partner as president and general manager, was trying to run the little mill and do a general building and contracting business by using the three sons—the four constituting the members of the company. His method was to have one or two of the boys on the building jobs (which business was run separate from the mill), while the other one stayed in the mill as foreman and sometimes manager.

When booking an order of mill work for a complete building, they would list the items in the order book, and would not have all the items in the estimate listed on the same or adjoining pages. When the items were billed out for working, they made no check to show what was billed, and made no attempt to keep the shop orders after the items were finished. When shipping an order, they would take everything in sight that was supposed to belong to the job, making no attempt to check up and see if they had everything which was ready, or were getting the right material. They would then make out the bills of lading and invoices from the order book, checking off the items which they thought were finised and sent out. In some cases they would fail to check out items which had been shipped. By not checking off the items when billed to the shop, they would sometimes get out an order the second time, and sometimes would not have everything finished when the job was shipped.

They were almost constantly in correspondence with an outside man, offering him a position as manager with a fairly good salary, on condition that he make the business pay. Sometimes they would get a man there to take the job, would take him through the machine room (which was equipped with about the most complete line of scrap iron to be found), show him the lumber shed, go back to the office, show him the order book (which at first appeared to be filled with unfinished orders), and tell him to go ahead.

After he had worked two or three days or a week, trying to find out what was out and what was not, the "old man" would inform him that his services would no longer be needed as foreman, but if he wished to remain as a machine man, at the same pay as the other men, he could do so. Occasionally they would get a pretty good machine man to stay on for a while by that method. They had at least half a dozen men to take the job in a year's time, only to turn them down after a few days, with the customary offer of a job as a machine man. It got to be a habit with the boys in the shop, when a new man went to work as foreman, to predict that he would lose out in a few days, and the prediction always came true.

Another method of billing which I have seen in use, works out all right until it gets to the factory. In this factory they only make sash, doors, blinds, frames and cabinet work, all moldings being gotten out at another plant a few hundred yards distant. The billing here mentioned applies particularly to sash, doors and blinds. The orders are sent to the factory from the main office and are of a very good form. The part which does not work out right is in making the cutting bills. The billing is done by each man doing a job of work, as he takes an order for, say a lot of sash, and does all the work (except the cutting) and sometimes puts the sash together, finishing them up ready for glazing.

When a man finishes a job, he is given an order, just as it comes from the office, and makes out a cutting list and gives it to the cutter. He then sets up the different machines to be used on the job, and if the cutter has not cut any of his order, he has to wait or else go and help cut it—and they already have about twice the number of cutters they need, if things were properly managed. When one man gets in good headway on a job, it often occurs that another man will be given a job requiring the same machines and the same set-up on all of them. For example, each man will be given a lot of 1⅜-in. sash, with regular stock sash sticking. With some of the machines they have two of a kind, and each man sets up a separate machine. In that way the work of one man does not often conflict with that of another. However, if they had a good system of billing and one man to lay off all the work, it would not be necessary to have so much money tied up in machinery.

A system of billing which proved fairly successful for one mill (a small one employing twenty to thirty men under one foreman) had its objections, not due, however, to the system of billing, but to the fact that the foreman would not always check the items on order sheet when he made the cutting list. All orders were entered on the order book in the same rotation that they occurred on the estimate sheet. The shop order was copied from the order book and made in duplicate, the shop getting the original and the shipping room the duplicate. All cutting lists were made by the foreman and all sash, doors and blinds laid off by him. The frames were laid off by the man doing the frame machine work, and all cabinet and stair work by the head bench man.

In another place, I saw a system in use which I consider a good one. It was in a fairly large factory, having four or five departments under separate foremen. Each department is numbered and receives its orders on paper of a different color from the others, and all orders are made on uniform sized sheets. All items on a job are billed on white paper and sent to the shipping department. At the left hand edge of this sheet is a column in which the number of the department furnishing the item is written, so the shipper can tell at a glance where the different items are to be made. This is quite a convenience in looking up the different items of a kind, say the doors included on a large job.

The whole order is then rewritten, the items sorted for the different departments and written on their respective colored order sheets. As soon as the foreman gets an order he makes a cutting list, with a duplicate copy. The original is sent to the cutting department and the duplicate kept by the department to check and lay off the work by. The cutter is required to make on one piece of each size, the size as listed in his cutting order, the number of pieces and the order number, also make a mark on each end of piece for convenience in locating it in case it should get turned over or mixed with the others on the truck.

There is a rule in force throughout this plant which requires the keeping of all pieces of a kind and size stacked together. When loading trucks, the material is laid along the full surface, one layer on top of another, instead of being stacked up in tiers to any height which may suit the loader. The latter method is one of the greatest causes for mixed sizes of which I know, and requires a lot of extra work in sorting out. I have seen mills where the stock was piled promiscuously on trucks at the bill saw. When it got to the man who was to lay out the work, he would sort it out, lay it off, and promptly mix things up again. In passing through the machining operations it would be sorted and mixed again at each machine, and when it got to the assembling bench would be worse mixed than at any other time.

With the better system in use, each man handling material is required to keep it sorted for the next operation. The man who lays off the work, selects the piece with the marks put on by the cutter. After laying off the piece, which is called the pattern, he marks on the side opposite the one to be used for the face (all work is stacked face down, therefore the marks are always on top) the purpose for which the piece is intended. the number called for in the original order, also the order number. For example, if he has on his list an item calling for five windows, 28 x 34, 2-light. 1⅜-in. check rail, he will mark on the pattern for the bottom side: "Bott. Stile 5 wds., 28 x 34, 2-Lts., 1⅜ C. R., No. 3287." The top stiles are marked the same as the bottom, except he marks top instead of bottom. Only one rail is laid off, always the top rail. The width of bottom rail is marked on the pattern and if there are any bars to be worked to the same length shoulder, he marks on rail pattern the number of bars to be run and the finishing size.

None of the machine men use an order sheet on sash or door work, but are guided by the instructions on the patterns. Each man handling the work sorts the parts requiring different operations in the next process. For instance, the sash sticker man sends all pieces which are finished on his machine, to the assembling bench. All stiles, rails, etc., requiring mortises for bars are sent to the hollow chisel mortiser, and all rails to be relished are sent to the relishing machine. When a machine is set up, everything that is ready and can be run on that set-up, is run before the machine is changed. To some, this system may appear to result in lots of material being lost or left behind; but it is seldom that anything of the kind occurs. Everything is kept in such order that one can, in a very few minutes, find any of the pieces, no matter how many hands they may have passed through. The man at the assembling bench is furnished with the list used by the layout man, to guide him in putting up the items.

When sash or doors are assembled, one or more of a kind and size is marked on the edge with the number, size, style and order number. When they are finished, and just before sending to the next department (panel doors to shipping room and glass doors and sash to glazing room), they are listed on a memorandum checked off from the department order (also memorandum), and both dated as to date finished. This system of checking saves a lot of trouble in looking up any of the items for future reference.

When all items are checked off the department ticket, it is delivered to the shipping department and attached to the shipping ticket. By this means the shipper can tell at a glance which departments have finished everything belongng to them. In case it is necessary for the department to hold some of the work back, notices are sent to the shipper when certain parts are finished. For example, when starting on a job of frames, as soon as the basement frames are

finished there is a memorandum sent in, reading: "No. 3287—basement frames ready to ship."

All tickets on which some of the items have bee shipped during the day, are sent to the office with signed bills of lading and dray bills, to be checked off the book and invoices made. Tickets having only a part of the items checked are returned to the shipping room, and those that are all checked are kept in the office and filed alphabetically. At intervals of two or three months they are placed in holders, the backs of the holders being dated as to period covered by the tickets contained in them. These tickets are preserved from year to year, so that anyone wishing an order duplicated can get it by stating the year in which the order was filled, and the order number.

## Machinery Arrangement—Handling Material

While there can be no fixed rule for the arrangement of factories for the different lines of work, there can be many good arrangements far better than some of the factories have, says F. E. Jackson in the Wood-Worker, Indianapolis. For a planing mill we might arrange a planer at the entrance of the mill, directly from the kiln-dried lumber shed; this should be a double surfacer to avoid carrying the material back behind the planer to be run again. The lumber shed is another thing that often needs rearranging, in order that it may be reached easily. Behind the planer, about 24 ft., and about 1 ft. to the right, should be a self-feed rip saw of a modern type, speeded so that it will turn out the material at full capacity. To the rear of the rip saw about 24 ft., and to the left, it would be well to set the sticker, which should be not less than an 8-in., four head machine. The swinging or slicing saw should be about 20, and not more than 30 ft. to the right of the molder.

Thus, when a truckload is brought from the dry kiln shed it comes directly to the double surfacer and falls at the right place for the rip saw man. He passes it through the saw, and if it is molding it is dropped directly behind the molder, and the molder operator can pick it up as easily as from a truck, and much faster than the machine will take care of it. If the material to be ripped is to be sliced, it is dropped on a truck and taken to the cutter, which is near the rip saw. Meantime the man who tails the rip saw throws the refuse to his left and back, so that it will be to the right of the man feeding the machine, and if he can use some of the smaller pieces they are in the right place for him to get with the least effort.

One of the main things in handling material is to see that it is kept together, so that the man who asesmbles it does not have to hunt the whole shop over to find all the stock. In cabinet work there are usually many small pieces, which will admit of closer arrangement of the machines, and closer observation on the part of the foreman to see that the material is kept together.

Upon taking charge of a certain factory I was surprised to find that a truckload of stock would be brought to the cabinet room, accompanied by probably a half-dozen bills, more or less, and not a mark on any of the material to indicate which bill it belonged to or what item on the bill. Consequently the cabinet maker would take nearly as long to sort out his material as it took the cutter to cut it in the first place. Each piece had to be measured, both for width and length, and he didn't mark them either, and would probably check them over several times before placing the material. This did not last long. Now, when a truckload of material comes to the cabinet room it must contain every piece that is on the bill or there is an excuse attached for the reason of the shortage of certain items. This excuse is written on the back of the billing sheet and is checked out only when the stock is gotten out.

This arrangement gives the foreman a chance to see immediately if there is any piece short, and make arrangements for it before the cabinetmaker is in absolute need of it. I would like to ask if any of the readers have any idea of the time saved per cabinetmaker per year, between the "happy-go-lucky" way of handling material, and handling it where each piece is numbered as to item and lettered as to sheet where it belongs? For instance, we start billing and the first sheet is lettered A, the next B, and so on down the alphabet. If there are twenty items on the sheet the first is 1-A or 1-B and so on. If this is attended to and placed on every piece entered on the bill, when the material reaches the cabinetmaker he can check it out very quickly, and without taking his rule from his pocket. If he wants to know if a certain piece on the plans and details is out, he looks to the bills, finds the item number, goes through the pile, and picks it out without measuring it.

In one factory, where I was employed, there were about ten or twelve foremen of the different branches of the work. These men were called into the office every Saturday morning and held a meeting (the manager acting as chairman) and conversed on the happenings of the week and the progress of the work. They could always tell just how far a job had gotten; suggestions were made and decided on by the majority present. The principal reason for meeting on Saturday was to talk over the happenings of the week while they were fresh in their memory. The company gave the men credit for the hour and was always well repaid. It kept the foremen interested, and they felt an obligation placed upon them to become thinkers.

Some factories use what is termed a suggestion box. In many instances it is a very good thing, but there are some difficulties that often arise with its use. The box is placed at some convenient point, and each man in the mill is allowed to make suggestions and place them in the box. At the end of each week the box is unlocked, the suggestions read and decided upon, and those accepted are paid for. While there are many good ideas secured by this method, there is always a confusion as to what they are worth. Again, some men constantly have good ideas and are paid for them, while others, somehow, do not make suggestions which are accepted. and it causes jealously among the men. Therefore I would not advise the use of the suggestion box, although it might be handled in some places.

We often hear of red tape, and what might be termed such by some would be termed system by others, and what might be termed system by some would be termed red tape by others. But system is what we need, with concentrated principles, elimination of unnecessary work or movements, and the establishment of shorter routes and processes to accomplish the best results in the least possible time. It should be the duty of the manager, superintendent and all foremen in charge, to give part of their time to thinking and planning for these advantages. Practical experience, together with theoretical ideas, often figure out many wrinkles. Some men have had the experience but are not theoretical, but it requires a man with both talents to establish a system that will enable his company to meet competition.

Many managers are still laboring under the idea that their old system is the best, and often will not submit to any changes being made. They would rather rely on a system that has been tried out, than to try to establish one themselves, and often make the remark: "That system might do for that shop, or that line of work, but not for ours." This is so often repeated that it has become an old saying, but if the factory is not paying, why not try another system?

Most mills that have been in operation a long time have a set way of doing things, and a foreman must be sure of his ground before making any changes which upset previously established customs. The resentment against these changes often takes the form of what is commonly called "knocking," an indefinable way of doing an injury to a man's reputation or efficiency, that is harder to control or overcome than any mechanical change in machinery. The most successful manager or superintendent is the man who can lead, rather than try to force, others to see the way that they want them to see.

There are things in every factory that are different from other factories, some handicapped processes that are hard to overcome, and others that are advantageous, but the thing is not how the other fellow does, so much as, "Can't we find some way that will shorten and beat it?" Many managers use the superintendent for a kicking post, and when anything goes wrong he is the one who gets the blame. It is true that the superintendent should be responsible for the happenings in the plant, but there is such a thing as one's energy being torn to pieces. The superintendent who can always find the right answer for either his men or his superior, is a live wire.

Where you find a factory running smoothly, everybody at the wheel and ready to push, from manager and superintendent down to the janitor, and all working for the interest of the company, you see a company that prospers. It takes the consolidated efforts of all the force to make a business successful; it takes scheming and planning, interlocked with close observation to secure the best results. If a department is lame, build it up. In this day and age, there are no reasons why any factory should be running in a hap-hazard way. There are many systems, thoroughly tried out and proven a success, and if you can find one that is shorter than yours try and adapt it to your work.

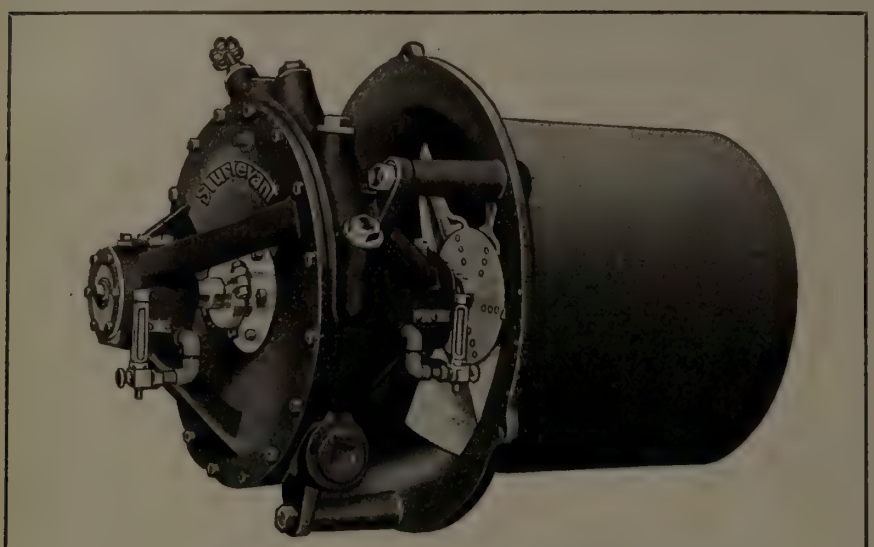
Old machines should be discarded and new ones, that double the output, installed, as well as new ideas and new systems. Sometimes this requires a complete renovation, which often will not be submitted to by the owners, but nevertheless, it would be the one thing to do. Many plants only need partial renewal, but if we keep up with the times and equip ourselves with the best of machines and the best of men to operate them, the hardest battle is easily overcome.

---

The foremen of the Stearns Salt & Lumber Company, Ludington, Mich., have inaugurated an interesting series of "Get Together" meetings for the present winter, the first of which was held recently. The meetings take place in a new hall with a seating capacity of 200, which has recently been erected in the mill yard as a second floor addition to the yard and office building. The principal subject under discussion at the meeting was "Plans for Improving Conditions in the Various Departments." The work for the winter was outlined, the intention being to hold meetings twice a month. Addresses will be given by representatives of concerns closely allied with the lumber industry. A representative of the Simonds Saw Company will give stereoptical lectures on the manufacture of steel products. Mr. Thompson, of the Standard Oil Company, will give an address on the "Formation and Distillation of Oils."

## A New Sturtevant Undergrate Blower

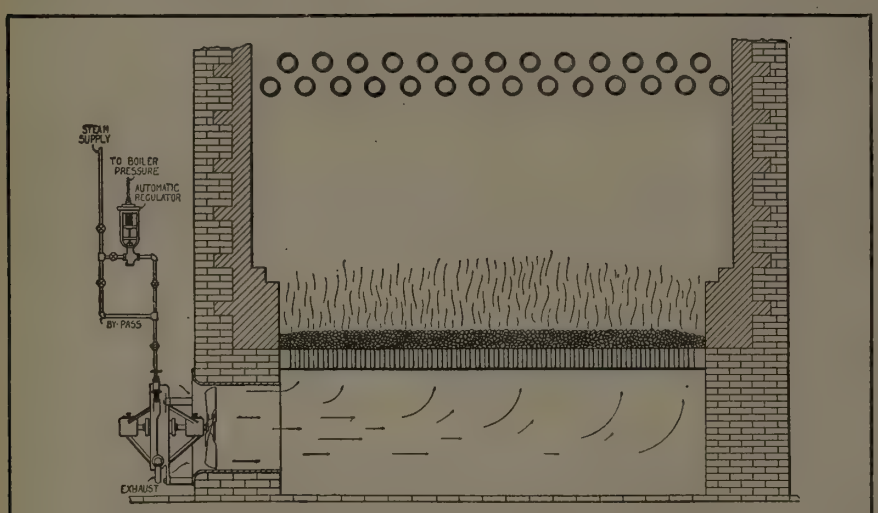
A new design of undergrate blower has just been built by the B. F. Sturtevant Company of Boston, Mass. Undegrate blowers are used very largely in sawmills and woodworking plants where shavings and sawdust are burned. They give an abundant draft for any



Sturtevant Turbo-Undergrate Blower.

kind of fuel and will often increase the steaming capacity of the boilers as much as 100 per cent. A blower is placed in the boiler brick work and can be installed over night.

The new set, which is illustrated herewith, is claimed by the manufacturers to have many mechanical advantages over all other machines. This particular set is almost identical with the large standard Sturtevant turbines. Substantial bearings are provided,

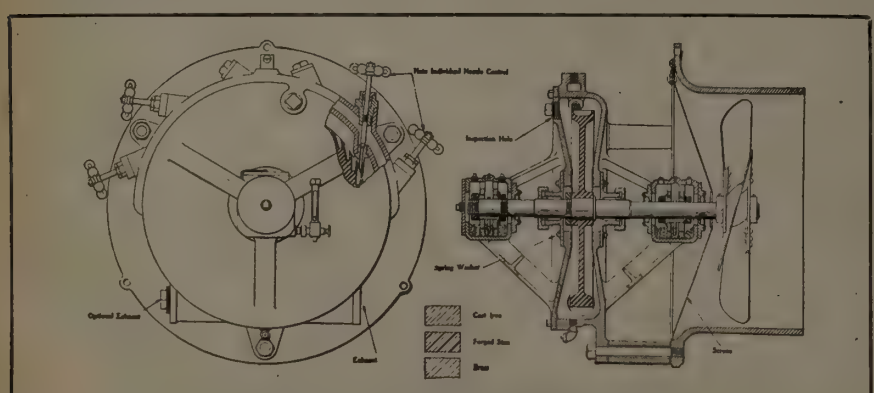


Method of installation of Sturtevant Undergrate Blower.

with oil-ring lubrication, and it is impossible for steam to get into the bearings. When the oil reservoir has been filled, it will last for weeks. The company claim that oil or grease cups do not give as great satisfaction as this type of bearing. The daily injection of oil is likely to carry dirt which will block the lubricating passes.

This machine, like the other design of Sturtevant undergrate blowers has no ball bearings. When ball bearings are used the heat from the steam is apt to dry out the lubrication, causing the balls to crack and break.

Another important feature of this machine is the floating metal-



Cross section of Sturtevant Undergrate Blower.

lic stuffing box, which prevents steam from getting into the bearings, and renders it possible to carry back pressure of 15 pounds. The casing has been made very large. This eliminates back pressure and tends to lower steam consumption.

The new machine has from one to six nozzles, according to the amount of steam required. The nozzle control is very efficient. The fireman can shut off any number of nozzles, thus obtaining high efficiency and minimum steam consumption at low loads. The sets are manufactured by the B. F. Sturtevant Company, Hyde Park, Boston, Mass.

## Publicity That Proved Effective

For several years the Jewett Lumber Company, of Des Moines, Iowa, has been conducting an active advertising campaign that has been characterized by a number of original features. George A. Jewett, of that company, induced each of the local daily newspapers to publish a home builders' page, having a house plan for the central feature. Surrounding the house plan, which was accompanied by a description, were the advertisements of concerns that contribute to the building, furnishing and equipping of homes. The Jewett Lumber Company's advertisements usually occupied the space in the middle of the page immediately below the house plans, and consisted generally of a "serial for home builders." These advertisements were written by Mr. Jewett and were devoted to a discussion of the plans appearing above them. A conversational style was adopted, and suggestions were made for the building of houses in such a way as to utilize in their exteriors and interiors the numerous wood products supplied by the Jewett Lumber Company. Mr. Jewett, as well as each of the other advertisers on the page, used in his advertisement a slogan, the Jewett Lumber Company's slogan being "Everything from the foundation to the chimney top."

After these advertisements had been running for many months the publisher of one of the local papers conceived the idea of running a home builders' page with spaces for the advertisers occupied by their slogans only, and offering a cash prize to the reader who would identify most of the advertisers by their slogans. When the contest was closed the publisher informed the Jewett Lumber Company that of the 500 responses received "Everything from the foundation to the chimney top" was attributed to the Jewett Lumber Company in every case but two. This was taken to indicate that Mr. Jewett's advertising had been conducted in such a way as to impress his company's name indelibly upon the readers of the papers in which its advertisements appeared.

The Jewett Lumber Company, however, has ample evidence of the profitableness of its advertising campaign in the form of substantial increases in its business. Mr. Jewett has declared on several occasions that the money spent for advertising has been the best business investment he has ever had. So fully convinced is he of the value of local advertising that he is determined to continue indefinitely his expenditure for newspaper space on a scale at least as large as in the past.

## "Veneer" a Badly Abused Word

The word "Veneer" in business and in ordinary conversation has been so subject to a variety of interpretations that manufacturers of veneer and of veneer machinery are to some extent handicapped by the misinterpretation frequently put upon the word by the public. An illustration of this is afforded by a recent utterance made by Hon. Richard Harcourt, ex-Minister of Education for the Province of Ontario. In closing an excellent patriotic address, delivered at the Crown Theatre, Bridgeburg, Ont., Hon. Richard Harcourt made the following remarks with regard to enlisting in the army:—"It is unfortunate that some people think they are doing a fine thing for their country when they applaud and cheer, but do nothing more. That it is nothing less than veneer." This is undoubtedly an injustice to the excellent veneer products which are turned out nowadays. The sense in which it was used by Hon. Richard Harcourt, however, is so common as to be the practically accepted use in dictionaries. In Webster's Dictionary the interpretations given for the word "veneer" are "outside show" and "pretence." Since the early days when this interpretation of "veneer" became general, the industry and art of manufacturing and using veneer have made such wonderful advance that, in future dictionaries, in order to keep abreast of the times will have to include a new interpretation which will do justice to the dignified and important position which this product has taken in the industrial world. Indeed, in order to be entirely correct, a complete new interpretation is necessary, giving to the word "veneer" only its more dignified meaning and referring to the old meaning as obsolete.

White pine and yellow pine are the woods most used for boxes, and each contributes more than a billion feet to the box industry annually in the United States.

## How a Travelling Salesman May Develop Trade

The customers of the wholesale lumber salesman do not come to him as they do to the retail salesman. He must go to them. When a man comes to the retailer's yard he usually comes with more or less inclination to buy. The man to whom the travelling salesman goes may have no inclination whatever to buy.

The travelling man must expect to make countless calls that do not produce immediate results, particularly when first opening a territory. The retail salesman may lack most of the qualities of successful salesmanship and still very likely sell enough lumber to make money. The wholesale salesman, unless he has definite selling ability and a good deal of it, positively can not earn his salary.

Of course there are some customers who afford easy sales to the travelling man. There are always some waiting to buy, some who need the stock. But it is not a large part of salesmanship to sell to these men. Salesmanship must be based on the ability to interest and persuade new customers to add constantly to the list of buyers.

The man opening up new territory must expect to do a good deal of missionary work and the man on old territory must consider that there are always more or less prospective customers who require developing into actual purchasers. To call regularly on just so many dealers and never to investigate whether there are others in the territory who might possibly become customers will never develop an increasing trade.

There is all the difference between success and failure in the way a salesman goes after new trade. It requires persistence and energy and no small degree of optimism to develop this kind of business. A salesman can make himself just about what he will. There is no real limit to the man with determination.

One salesman carries around with him an atmosphere that spreads a feeling of opposition wherever he goes and kills even future chances. Such a salesman rarely gets to be more than a stranger to new customers. Another man just as much a stranger at the outset knows how to appear and how to act to secure the interest and attention of his prospect.

A retail lumber dealer is very likely to raise an invisible barrier between himself and an unknown salesman. Nobody loves a strange travelling man, at least no dealer welcomes him with a glad hand.

Common as it is for dealers to object to listening to the travelling man's storey when he is a new man, travellers never seem, some of them at least, to be able to refrain from showing temper in such instances.

Is it not conceivable that a lumber dealer may be too busy to listen to a travelling man's story the first time he comes? I have seen plenty of travellers who seemed to think a dealer was lying to them if he said he was too busy to take time to see them. Such travelling men, by their indignant actions, practically accuse the dealer of lying to them when he claims to be busy. They sometimes try to force a hearing and ruin their chances for ever with that dealer.

To insinuate that the dealer is under obligations to lay aside his own affairs and listen to your story is to intimate that his business is of less importance than your own, that you are a higher class business man than he is. This is an attitude that will keep you from getting into the good graces of any man toward whom it is shown.

The first rule in the salesman's handy book ought to be, "Never get disgruntled!" When a lumber salesman has learned to keep his temper and, more than that, to keep good natured and cordial in the face of rebuffs and slights and "throw-downs" he has taken the longest step toward successful selling. He has made it possible to go into any dealer's yard or office and leave without an order, but with a better prospect of getting the order next time.

Unless your call on a prospective customer leaves that man in a frame of mind that will make him more likely to buy another time, you have not exercised proper discretion. You have fallen down in some part of your approach and subsequent conversation.

Of course I am not upholding the dealer who is not courteous to salesmen. No retail lumber dealer can afford to slight the travelling man and it will prove to his disadvantage to do so. But there are many dealers who do not properly realize this fact and there are some who do not care. These disagreeable dealers buy goods, sometimes a large amount of them. It is worth while to overlook their peculiarities in order to sell them lumber.

Every dealer has had the experience, perhaps many times, of having the travelling man go right up in the air when refused a chance to tell his story. No dealer ever gets to feel just right toward such a man again. There is usually a reason when the buyer declines to give the seller a chance. If that reason is not well grounded and can be moved aside without causing ill feeling, persistence will do its work, but persistence should stop short of being insistence.

Naturally, it is not good salesmanship to shut right up and walk away the instant a dealer says he is busy, or says he does not need anything. But the dealer's absolute statement that he is not in the market and the sign that he is going to be displeased if you do not take his word for it ought to be enough to cause the travelling man to back out gracefully, leaving an opening for a future call.

Scattered here and there through your territory are isolated dealers who live in small villages and whose trade does not seem worth stopping for. There are others who live in large towns but who are so over-shadowed by their competitors that they receive no attention from the selling forces covering their section.

Both of these classes of dealers are susceptible of development. The dealer in the small village may buy in a small way, but you can secure almost entire control of his purchasing if you will give him proper attention, and you never know when a boom may start in his territory and then you will profit hugely by the friendship of the small dealer. The small dealer surrounded by large ones may seem insignificant, but it is not infrequently the case that the small dealer has ability to grow and determination to succeed. All the big dealers started as small ones. Success never comes ready made. If your competitors are getting the business of the big dealers in a town, beside trying to get what you can of that business, see what you can do to help the little fellow develop. Your suggestions and your ideas may be just the additional inducement and incitement he needs to get him to building up his trade.

The salesman who helps a small dealer get started growing will not have much trouble in holding his trade after he has grown.

Don't overlook the little dealer in the little village and don't overlook the little dealer in the big town.

If you hope to interest new trade don't give it time to forget all about you between trips. Help the house to arrange your territory so that you will see these new men often enough to keep your personality and your arguments before them. Many remedies act better when given in small doses at frequent intervals, than when given in large doses at long intervals.

If you can not get to see a man until he is likely to have forgotten you, write him a letter. Don't write just for the sake of writing. Have something pertinent to say and say it in few words and in pointed words. Having the house send out form letters mentioning your name will not help any in impressing your personality on the dealers you hope to interest. Use some of your spare hotel time in dictating personal letters to the public stenographer and sending them to prospective buyers between trips.

Of course, this takes time. Anything you have to do to earn your pay or to secure your success takes time, but no one has ever yet known of a man developing a trade in any line without spending some time in the work. That is what your time is for.

In looking for chances to develop new customers don't neglect the development of the old ones. There are salesmen who, when they become well acquainted wth their dealers and who regard their business as securely clinched, hurry into town on one train and ask the dealer to favor them with a rapid-fire audience so they can get out of town by the very next train. This sort of treatment opens the way for the more careful and deliberate salesman of another house to secure bigger and bigger orders until he may crowd Mister Man-in-a-Hurry out altogether.

You have no better prospective buyers than the men who have already bought from you. Develop your present customers as well as your future customers.

Of course you must keep adding new customers or your business will in the very nature of things decrease. Dealers die, go out of business or are forced out. Many changes take place in your trade in a year. These changes mostly reduce your sales. In order to hold your own you must be continually adding new names to the list to take the place of those that are dropping off for one reason or another.

So important is the development of prospects that one is almost inclined to say that the securing of a new prospect is more important than the increased development of an old customer.

If your line is a line of specialties, you need to secure new users or buyers, and it is often just as easy to interest a new dealer in handling the line as it is to win over a dealer from some other similar line. The education of the dealers is work that is perhaps primarily that of the house, but the salesman must take no little part in the educational campaign. Many dealers who pay no attention to literature sent them will listen to the same information imparted by a traveller who is a friend as well as a business acquaintance.

The development of new customers is in a way merely the making of new friends. The man who makes friends readily can make new customers. Personal methods are what count, and while you can not do things to place a prospective customer under obvious obligations unless the opportunity is great, you can develop an undertone of friendliness that will count strongly for you some day. Relations with buyers are commonly supposed to be kept on a business basis, but do not adhere to this plan so strictly as to fail to take advantage of the possibilities of the personal element.

---

The Canadian Naval Department is in the market for bundles of hazelwood or willow boughs to be used as fenders to hang alongside battleships, a supply of which can no longer be obtained from Norway and Sweden.

# WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Business Chances

### Pulpwood Limit For Sale

A fine freehold virgin pulpwood limit for sale. Easy operation, rivers running to railway. For further information write to Box 122, Canada Lumberman, Toronto. 1 t.f.

### Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

## In the Supreme Court of Ontario

In the Matter of The Winding-Up Act, being Chapter 144 fo the Revised Statutes of Canada and Amending Acts.

And in the Matter of the Dominion Lumber Company, Limited.

Judicial Sale by Public Auction of valuable timber lands, limits and mills situate in the Province of Quebec.

Notice is hereby given that pursuant to the Winding-Up Order made in this matter and bearing date the 9th day of June, 1914, there will be offered for sale with the approbation of Geo. O. Alcorn, Master in Ordinary of the said Court and with the concurrence of the Royal Trust Company, Trustee for bondholders, by Public Auction by Fraser Bros., Auctioneers, at No. 453 St. James Street, Montreal, Quebec, at the hour of 10.30 o'clock in the forenoon on the 30th day of January, A.D. 1915, the following lands and premises and assets in one parcel:—

A.—In the seigniory of Ste. Anne des Monts, in the County of Gaspe, in the Province of Quebec, 1,000 acres more or less of timber lands, together with a duly equipped lumber and shingle mill, having a capacity of 25,000 feet of lumber and 125,000 to 150,000 pieces of shingles every ten hours, also dwellings, storehouses, repair shops, etc., also 289 square miles timber limits in said county held under Government license and numbered 22 to 29, estimated to contain over 350 million feet of saw logs, principally fir, spruce and cedar, and 595,000 cords of spool and pulp wood. Also logs in river estimated at 1,000,000 feet board measure.

B.—Near La Grande Vallee des Monts, in the County of Gaspe, in the Province of Quebec, 54 square miles of timber lands and 100 square miles licensed timber limits (held under Government license and numbered 30, 34 and 35) reported to contain 100 million feet of saw logs and 245,000 cords pulp and spool wood, together with new lumber mill fully equipped and having a capacity of 50,000 to 75,000 feet of lumber every ten hours, also a mill for sawing shingles and railway ties, with a capacity of 125,000 to 150,000 shingles every ten hours and all necessary shanty plant, etc.

The property will be offered for sale subject to a reserved bid fixed by the said Master in Ordinary.

**Terms of Sale.**—Accepted cheque for $10,000 payable to the Liquidators to be deposited with the Auctioneer by each bidder when making bid. Twenty-five per cent. of purchase price to be paid in cash and balance shall be paid in three equal annual instalments and shall bear interest at the rate of seven per centum per annum, such instalments to be secured to the satisfaction of the Liquidators.

The Purchaser may at his option pay the whole purchase money in cash.

The terms and conditions of sale in all other respects are the standing conditions of sale of the Court so far as applicable.

For further particulars apply to Archibald W. Stevenson, Eastern Townships Bank Building, Montreal, Quebec, Charles A. Millener, Deseronto, Ontario, Frank Denton, K.C., 20 King Street East, Toronto. Liquidators or to Masten, Starr and Spence, 58 Canada Life Building, Toronto, Canada.

Dated at Toronto this 14th day of November, A.D. 1914.

GEO. O. ALCORN,
23-2 Master in Ordinary.

### Furniture Manufacturers

Lumber dealer, having unlimited quantity of birch, maple and beech, desires to enter into negotiations with Ontario firm of furniture manufacturers who would be willing to change their location. Have no experience, but can procure sufficient capital to develop business. Excellent prospects. Address in first instance to Box 115, Canada Lumberman, Toronto. 24-1

### Splendid Chance for Sash and Door Manufacturer

One or two practical planing mill men with a little capital are offered an excellent opportunity to get into business. The property available is an excellent newly-equipped woodworking plant, in Ontario, for turning out sash, doors and millwork. Local capital can be obtained to build up business. Unsurpassed location and shipping facilities. Owner wants to retire from business. Box 116 Canada Lumberman and Woodworker, Toronto. 24-1

### Sawmill For Sale

Rare bargain. Big opportunity to go into the sawmill and store business in a small way. Sawmill, store, dwelling, stables and four acres of land, situated five miles from Southampton on the main road leading to Owen Sound. Capacity of mill, 10 to 12 M. feet per ten hours. In first class condition. Good supply of logs can be had for a number of years. Home market in Southampton for all the lumber, slabs and sawdust. For further information apply to J. Seibert, Southampton, Ont. 1-2

## Miscellaneous

### Saw Mill Wanted

Wanted to purchase a saw mill in good order, capacity about 75,000 ft. per 10 hours. Party buying desires to move mill. Apply Bartram Bros., Limited, Ottawa, Ont. 1 t.f.

### Agents Wanted

Large United States firm manufacturing steel wheels, farm trucks, handy wagons, logging and traction wagons, dump carts, engine trucks, etc., wants Provincial agents throughout Canada. Write stating what territory you can cover. Box 119, Canada Lumberman, Toronto. 1-3

### Wanted To Purchase

200 to 300 boom chains, ½ inch thick and nine feet long, with toggles and rings attached. Name best price for cash f.o.b. cars shipping point.

MONTEITH BROTHERS,
1-4 Rosseau, Muskoka, Ont.

### Agents Wanted

One of the largest firms on the Continent making motor trucks, wants sales agents for whole or part of Canada. Putting out a truck which represents one of the most important advances in truck manufacture. It drives from all four wheels and likewise steers and brakes on all four wheels. Company very strong financially. Box 120, Canada Lumberman, Toronto. 1-3

### Sawing Contract Wanted

Want to secure contract for the sawing of 1,000,000 to 5,000,000 feet of logs. Have No. 1 portable sawmill, fully equipped. Location immaterial.

HUGH BAIRD & COMPANY,
22 1 Markdale, Ont.

### Rossed Pulp Wood

I will close a contract immediately for machine Rossed Pulp Wood, 24-in. and 48-in. long, quotations f.o.b. Cochrane, Ont., or at place of delivery. I have the control of a large quantity of pulp wood yearly.

I also have for sale 50,000 ft. of 1-in. dry White Birch.

L. BOIVIN,
23-2 Box 46, Cochrane, Ont.

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

**Saw Mill Machinery For Sale**

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

## Utilization of Wood Waste

A few weeks ago a correspondent in Vancouver was asking through our columns information concerning the successful production of acetone and fusel oil, etc., from sawdust, by a simple process of fermentation, says the Timber Trades Journal. This inquiry has brought the following information from Mr. J. C. Stead, technical chemist and chemical engineer, which will no doubt be helpful to many who are interested in this important question of getting as much as possible out of the mill refuse.

Methods for producing alcohol from sawdust have been several times tried, but so far without commercial success. The latest attempt in Great Britain was made some four, five or more years ago, when the process by a German named, I believe, Zimmerman, was tried, on an extensive scale. However, there were a considerable number of difficulties in not only operating the plant, but also in disposing of the refuse, and I do not think that it is in operation now.

Fusel oil would be produced at the same time as alcohol.

Acetone is obtained by the dried distillation of an acetate originated in the acetic acid produced by the dried distillation of wood.

Isoprene for artificial rubber making, is not, so far as I am aware, produced from cellulose. There is in course of perfecting a method of producing this by special fermentation of starch. I do not think that isoprene produced from wood could stand any chance in competition with the isoprene produced by this latest introduced method.

## Merits of Birch

Without detracting one iota from the genuine worth of mahogany, it can be stated that birch possesses certain qualities which are superior to mahoganv. It is stronger. It stands strains which would snap the tropical wood. It cannot be truthfully asserted that in beauty of grain, when properly finished, birch goes ahead of mahogany, because it does not—no wood does. But in combining strength and beauty, it ranks above mahogany. It takes finishes which no mahogany has ever yet received.

It is not necessary to claim for birch that it is superior as a furniture and finish wood to all others in America. There are other extremely high grade cabinet woods in this country, and all that need be claimed for birch is that it ranks with the best of them. It is strong, hard, stiff, takes fine polish, responds remarkably well to the application of stains and fillers, and if a figured wood is wanted, selected birch supplies it. All of the qualities of a superb cabinet material are here. It is no experiment. It has held its place and gained ground from the first, and it has reached a point where it is able to stand on its own merits and against all comers, either domestic or foreign. This claim extends to lower as well as to the best grades of highly-colored and finely-figured stock. Birch fills plebian as well as aristocratic places; it is the camp stool as well as the rocker; the bed slat as well as the carved legs of the grand piano. It is fit for nearly every part and class of woodwork. It detracts nothing from its long and honorable reputation to know that excavations have shown that the terrible war chariots of the Assyrians, with scythe blades on the hubs and spears on the ends of the poles, were made of birch—rims, hubs, spokes, axles, poles, and body. Then why hide the identity of this splendid wood under aliases and disguises?—Timber News.

---

The parish church at Bolton, Mass., was reshingled recently for the first time in one hundred and twenty-one years. In 1793 this church was shingled, the roofing being split from white pine logs, all shingles, of course, being handhewn. It is a testimony to the timber that the shingles were found to be in a state of almost perfect preservation. Nowadays we hear a great deal about steel replacing wood, but nature seems to outrival science in some respects.

# Review of Current Trade Conditions

## Ontario

With the end of the year, and its accompanying inventory and holiday season, trade has naturally become very quiet. All who have been following the trend of events during the past few months with care are now looking forward with keen interest to the developments which may come about early in the New Year. It is not long now before we will know fairly definitely whether the optimistic predictions of many important lumbermen have been well founded. In Ontario, aside entirely from the abnormal conditions brought about by the war, the situation is one which should work out in the direction of a good demand and firm prices. In fact, it would unquestionably have this result, were it not for the war. The situation therefore, is one in which these two factors have to be calculated, the one against the other. Inasmuch as the war situation has improved since the very anxious days of early August, it is rather natural to feel that conditions tending towards better trade may commence to have the upper hand in the near future. There is no question that in Ontario, the farmer has had an excellent year. His crops have been plentiful and have sold at good prices and he is in a position to spend money upon improvements, if he can be persuaded to do so. The unfortunate part of the situation is that the farmer, like every other man with any money in his possession, is influenced to-day to a great extent by the uncertainty prevailing as to future conditions which may develop out of the war. He therefore has, in many instances, a natural inclination to put his money away, without spending it, so as to have something to fall back upon in case the depression arising out of the war should continue over a protracted period. If this spirit prevails to any great extent, the farmer's purchases will be only those which he considers indispensable to his business. Any others, which he can look upon at all in the light of a luxury, or only as a partial necessity, will be postponed. It would be foolish under these conditions to make any attempt at foretelling definitely the course of trade during the next few months. There is one thing certain however, namely, that the conditions prevailing in connection with stocks, during the first half of 1915, will be such as to assist any upward tendency in the values of lumber. The quantity carried over by retail yards and mills is unusually light. The amount to be cut in the woods this winter is also far below the amount of previous years, having been estimated at a reduction of, all the way from 25 to 40 per cent. In the larger centres, trade is going along fairly steadily on the basis which was struck about the first of November. There is a fair volume of stock moving all the time, to fill the reduced demand for manufacturing and building purposes. The interesting surprise of this situation has been the fact that this amount of trade, in itself, is sufficient to furnish a fair quantity of business for practically every manufacturer and wholesaler. No one reports anything in the way of a rush of orders, but it is remarkable how many report that they are receiving sufficient business to keep them from being in any way anxious about the immediate future.

A well-known manufacturer in northern Ontario, writing under date of December 23rd, says: sales have been better in the last month and enquiries more numerous, with buyers looking for a cut in prices. We think that trade will brighten up again in the spring and with the smaller cuts being taken out, prices will hold firm."

## Eastern Canada

Trade continues quiet at Montreal, the holiday season, the war, and the weather, all combining to restrain business. In the building business there is very little going on. In the country districts, however, building operations are more active, as the good harvest has minimized the results of the depression. Montreal retailers are reported to have plenty of stock to last them till spring.

The market for eastern spruce at Boston has been firmer during the past fortnight, which is a very encouraging sign, because, as a rule, during the last two weeks of December, the market is dull. Offerings of dimension and random have been light, as most of the large manufacturers are filled up with orders from Great Britain. Manufacturers are insisting on $25 base, Boston rate, for railroad shipments of dimension. Direct sales to the retail trade are still made at $24. At New York, there is an increased volume of trade in eastern spruce, but prices have not altered.

The demand for shingles at Boston is light, and dealers report that they are suffering a good deal from the legislation against wooden roofs. Country yards, however, ascribe the dullness to the arrival of winter weather. Some fancy brands of white cedars are quoted at $3.50, but most of the business is at $3.35 and $3.45. Clears are bringing $2.80 to $2.90 and second clears $2.50 to $2.65. Red cedars are selling at $3.35 to $3.55 for extras. The demand for lath is moderate, but offerings are light and prices firm. Some sales of 1⅝ in. are reported at $4.20, but a more general price is $4.25. There is not much interest in 1½ in. lath. Stocks, however, are not heavy and are bringing $3.80 to $3.85 for good plump stock. Some 1½ in. lath can be had at $3.70 to $3.75.

## Great Britain

The determination of Germany to include lumber among articles considered as contraband of war is the chief subject of interest in the lumber trade of Great Britain. It is not a matter which will have any effect upon Great Britain's military operations, but it is a matter of the utmost importance to the lumber trade of Sweden. Prices have already tended to advance in Great Britain, not only for Baltic timber, but also for spruce, and, in fact, for every description of wood which can be used as a substitute for Swedish products. In London, for the time being, the situation is peculiar, owing to the simultaneous arrival of many steamers, and the consequent moderate prices secured for overside parcels. In this case, holders apparently prefer to obtain a fair profit rather than land the goods and wait for higher prices in the course of a month or two. On account of the closing of the year, business in Londan shows signs of dullness, and the pressure at the docks is gradually lessening. The demand, however, is quite good and fairly general, the only question being how long it is likely to continue, at the present high prices. That prices will be high this year is generally expected, although the shortage of money may restrain the advance. Recent reports in regard to prices for Archangel and White Sea goods this year place red, thirds, 3 x 9 in., on a basis of £11. However, it is useless to speculate on this point, because the whole of the Russian trade—which has become such an important factor of late—has been thoroughly disorganized, and a season or two will be required for the return of normal conditions. Since the outbreak of the war some very large orders for timber have been carried out by the province of Quebec, including an order for 4,000,000 feet, received from the British Government. A further government order for about the same quantity was placed early in December.

A steady improvement is reported in the trade at Liverpool and Manchester. Good trade is also expected to continue, the most serious trouble being the probable shortage of stocks. Spruce is still strong, in the face of what appears to be almost a probable famine. The improvement at Manchester is quite noticeable in spite of the rapid increase in prices of soft woods. It is reported that the government has taken over several more steamers that were formerly engaged in carrying timber from Canadian ports.

## United States

Continued reports of an optimistic nature come from United States centres. It is noticeable that a stronger tone of confidence is being used in connection with business reports of many descriptions. It is especially significant and interesting to note that during the month of November, 20,000,000 bushels of wheat were exported from the United States, whereas during the corresponding week of 1913 the exports of wheat amounted only to 3,000,000 bushels. Producers are in a very favorable position for spending money as they have received high prices for their produce. During the past four months great strides have been taken in the direction of restoring public confidence. Great Britain's financial situation has been placed upon a sound and serviceable basis. The British Navy has practically cleared the open seas of Germany's war ships, which has brought a great relief to commerce. It is reasonable to expect, therefore, that early in the present year an improved outlook will develop for general business.

The lumber business is holding its own about as well as any other. There is still considerable weakness and irregularity in prices in some sections, but the demand for consumption is fairly steady, although it is largely for stocks for immediate use. In the rural communities retailers are not buying to any extent in anticipation of their future wants. The only extensive buying has been by large consumers. In the larger cities and towns building operations have been heavy enough to cause a steady demand, and open weather assisted greatly up to the middle of December. In Chicago, the number of building permits in November was exactly the same as in the corresponding month of 1913 and the estimated cost was slightly greater. This provides a steady and good demand for rough and dressed lumber, interior trim, and sash and doors. There is a general belief that country yard stocks are low, as retailers have not been buying at all extensively. The New England trade is greatly improved, and prices have advanced slightly, largely as a result of the heavy demand for eastern spruce coming from European countries.

View of Mills in Sarnia.

# BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

### Ottawa Trade News—Box Factories Busy

Ottawa, December 22 (Special to the Canada Lumberman): With the approach of the holiday season, trade is naturally rather dull at present, but lumbermen profess to be faidly optimistic for the outlook for the new year, in spite of the war and its consequent effects on trade in general. Operations in the woods have been helped by the 10-inch snow fall of the past week. J. R. Booth now has 17 camps in, with about 80 men in each camp. He is operating principally on the Madawaska and Montreal rivers. Wages range from $18 to $26 per month. Prices remain the same and are not likely to alter for some time.

The war has caused a busy trade for box factories. The Estate James Davidson, of Ottawa, is sending out a car of boxes every two days to the Borden Condensed Milk factories. They have a contract for one year. The same firm (that is the Estate James Davidson), has issued a statement to the effect that all the birch and ash lumber used in their factory, with the exception of ash veneers, which can be bought in the United States with better satisfaction, is Canadian. This statement is made in connection with the campaign urging the public to buy goods made in Canada.

The most interesting matter just now with the lumbermen in the Ottawa Valley, as well as with lumbermen and employers of labor all over Ontario, is the notice of assessment sent out by the Workmen's Compensation Commission. The assessment is to be paid 15 days from the date the notice was mailed, but owing to the industrial conditions being so bad, as a result of the war, half the payment may be held over until June 30th, 1915, with interest at six per cent. The enforcement of the Act will mean a considerable item of increased expenditure to lumbermen. In the case of Mr. J. R. Booth, whose annual payroll averages around $1,000,000, his assessment is $22,000. The rate on sawmill employees is $1.80; on those engaged in lumbering in the woods, $2; construction gangs, $2.50; pulp and paper mill hands, $1.40; machinists and blacksmiths, $1.50, and so on.

By an order-in-council just issued, the government delegates to the Minister of the Interior, authority to issue free permits to cut timber on Dominion lands, in order to give employment to some of the many unemployed in the country.

The water in the Ottawa is again causing serious inconvenience to the pulp and paper mills in the city. When running at capacity Mr. Booth's mills turn out 160 tons of pulp per day. Now they are yielding only from 35 to 40 tons and consequently large quantities have to be bought from the Abitibi Company. The E. B. Eddy Company, of Hull, are similarly affected.

Two weeks ago Mr. J. R. Booth formally presented to the board of governors of St. Luke's General Hospital, Ottawa, a new wing, built at a cost of $125,000, paid for by the veteran lumberman. The presentation was made to the board by Mr. Booth in person, before a large gathering of prominent people. The formal opening was made by H.R.H. the Duke of Connaught. The Women's Ward of the new wing, was furnished by Mr. John Lumsden. It will be known as the Lumsden Ward.

---

### Montreal Business Still Quiet—Country Trade More Active

Montreal, December 23 (Special to the Canada Lumberman):—Winter conditions and the holiday season have militated against any activity in the lumber trade; without taking into account the dullness which has resulted from the European situation. The building business is in a more or less disorganized state, owing to the lack of contracts and the conflicting scales of wages which are in force. Firms have been tendering at prices which have little or no margin, and have offered wages based on these low quotations; the workmen have therefore in many instances been compelled to accept cuts, notwithstanding the demand of the Unions that normal rates be paid. One satisfactory feature of recent date is the large amount of building which has been going on in the country districts, where the people have not been so adversely affected by the depression, owing to the good harvest. This has, of course, considerably helped the lumber dealers.

Local lumber yards are reported to be well supplied with stocks, which will not move to any extent until the spring.

Among the exporters from Montreal last year were Messrs. Graddon & Owens, Montreal, who shipped just over a million feet of pine and birch.

The ground wood market is in a very strong position owing to the fact that United States rivers are low, and that little ground wood is being produced on these streams. Consumers have consequently to purchase from Canadian mills in order to fill their requirements. It is probable that prices will advance in the near future, the present quotations being about $18 at the mill.

Kraft pulp is also enjoying a good market, and indications point to a scarcity of this material during the winter.

There is a plentiful supply of sulphite pulp, especially in the United States market, due to curtailment in production by many of the paper mills making the finer grades. News sulphite, however, is in good demand as the new mills throughout the continent are running to their full capacity.

---

### Liverpool Trade Continues Quiet

Farnworth & Jardine, in their monthly wood circular under date of Liverpool, December 1st, say:—There is little change to report in the business of the past month; deliveries about kept pace with the moderate arrivals, but the demand is quiet, excepting for special woods required for Government purposes. Stocks are comparatively light, and values are firmer. Ocean freights are very high, and tonnage almost unobtainable.

Canadian woods.—Pine timber—Imports during the past month were on a moderate scale, but the demand continues quiet; values are firm; stocks sufficient. Waney pine.—First class: The arrivals, again entirely to Manchester, were on importers' account; the demand continues slow; deliveries disappointing; stocks are adequate; values firm. Second class: There is only a limited enquiry. Square pine.—The demand is very limited. Red pine.—Seldom enquired for. Oak.—Imports were light, and chiefly on merchants' account for special railway work; the demand, however, is very quiet, but stocks are not too large; values steady. Elm.—About 3,000 feet imported; deliveries from Manchester imports were satisfactory, but they more than represent the actual consumption, a portion being forwarded to other centres; stocks are adequate; values are firm. Pine deals arrived more moderately; there has been a little more enquiry, and the deliveries show improvement, but stocks are sufficient; values steady. Red pine deals.—There is little improvement in the demand to report; stocks are light, and values firm.

New Brunswick and Nova Scotia spruce and pine deals.—The import to the Mersey (including Manchester) during the past month amounted to 3,960 stds., against 1,630 stds. during the corresponding month last year; the demand was steady; deliveries satisfactory, and stocks are considerably reduced; prices continue to advance, and now rule very high. Ocean deal tonnage is very difficult to obtain. Pine deals are in fair request; stocks are light, and prices steady.

Birch.—Logs—Very little imported; deliveries were small, and stocks are moderate; there is more enquiry for fresh wood, of suitable dimensions. Planks.—Deliveries slightly exceeded the moderate import, but stocks remain heavy.

---

### London Markets Active at Firm Prices

Churchill & Sim, London, Eng., in their monthly wood circular, under date of December 3rd, 1914, report as follows:—The deliveries of wood amounted to 43,000 standards in November in comparison with a delivery of 29,000 standards in November, 1913, thus exceeding last year's figures by some 14,000 standards. This brings the total delivery for eleven months to 294,000 standards against 285,000, an excess of 9,000 standards. In face of a continuously strong demand the market has shown considerable firmness, and the forward business from Swedish ports has been heavy. The sudden decision of the German Government to add wood to the list of articles to be scheduled as contraband of war has emphasized the strength of the market, and by practically shutting off the main Swedish supply from the Baltic, has turned buyers' attention to what little can be shipped from the White Sea and spruce ports, where prices have risen rapidly in consequence. There are practically no wood freight quotations on the market at present, and liner rates have risen briskly.

From the St. Lawrence the figures of imports are:—

Pine deals, 248,000 pieces, against 492,000 pieces in 1913.
Spruce deals, 763,000 pieces, against 1,033,000 pieces in 1913.
Birch planks, 174,000 pieces, against 301,000 pieces in 1913.

and from New Brunswick, etc.—

Pine deals, 28,000 pieces, against 32,000 pieces in 1913.
Spruce deals, 793,000 pieces, against 433,000 pieces in 1913.
Birch planks, 383,000 pieces, against 336,000 pieces in 1913.

There is little change in the conditions of the pine deal market; the demand has been of quite a retail character and prices are unal-

# The Moreau Barking Machine

The Moreau Barking Machine is entirely in a class by itself as the most economical and efficient barking equipment made.

As compared with other rossing devices the Moreau machine requires half the power to operate it for over twice the out-put, and eliminates the time consuming and costly operation of boiling logs.

Used in conjunction with a pulp wood plant the Moreau Barking Machine will show surprising results. A valuable feature of this outfit is that it is readily portable to any point in the woods—at the railway siding or wherever shipping facilities are offered. Its own weight is sufficient to hold it in place when in operation.

The Illustration shows the Barker at work by a siding with logs being loaded direct from the machine to the cars.

***Write us for literature and prices***

## The Moreau Barking Machine Co.

**Limited**

**St. Hyacinthe, Que.**

tered. Spruce deals have shown a buoyant tone, and the demand for them, in the absence of Riga shipments, has been consistently progressive. Large quantities have arrived in November both from Quebec and from the Lower Ports, and shippers' ideas of value have gone up considerably now that competition is probable from North of Europe ports. Hardwood planks have not shared in the rise in prices, and the demand is disappointing. There is no change to record in the market values of Canadian hardwoods.

British Columbian and Oregon pine.—This market has shared in the general prosperity, and the deliveries for the month are larger than usual. Prices have risen to the level of pitch pine, and the longer wood, though the demand is small, is fetching high prices, owing to the absence of any competing supply.

## Barbados Market Report

S. P. Musson, Son & Company, Barbados, report under date of December 1st, as follows:—

Lumberstuffs.—White pine—The only arrival to note during the fortnight has been the Schr. "Viola May" from Mahone Bay. This vessel brought about 69,400 feet, which had been contracted for some months ago. Further supplies are wanted, and we would value first arrivals at around $34, for Merchantable and $26 for Second quality. In spruce the "Viola May" also brought 76,500 ft.; this had also been sold to arrive. The market is lightly supplied, and shippers are worth $27.50 duty paid. Pitch pine.—No receipts—market supplied. Shingles—The market continues heavily over stocked, and at present further supplies are not wanted. Shooks—We note the arrival of 484 bdls. by steamer from New York for dealers' account, and the "Jacob M. Haskell" has arrived from Portland to our address with a cargo of 21,945 bundles. Wood hoops—The London steamer brought 450 bundles for dealers' account.

## Quality Versus Price

A. L. Porter, the enterprising and energetic secretary of the Western Retail Lumbermen's Association, is a firm believer in quality and service as a means of attracting and retaining patronage, as compared with price cutting. Through the medium of their association organ, the Western Retail Lumberman, he has energetically and persistently preached this doctrine. In carrying on correspondence with his members he has continually offered advice and counsel along this line. Recently, writing to the general manager of an extensive lineyard company he gave his reasons why he did not believe it was good business policy to print the price of lumber or building material in the local papers. Replying to the reason advanced by the retail lumbermen for adhering to that policy, Mr. Porter says:

"I agree with you absolutely that the fellow who has the last chance has the best chance of landing the order. The one who has talked all the selling features except price has the best chance.

"The whole point I have been trying to make in this correspondence, that it is, in my opinion, a worthless expenditure of money for a retail building material merchant to advertise the price per thousand in his local newspaper, or any of his advertising; for, by so doing, in many instances, he will neither get the first or the last chance.

"When one advertises nothing but the price per thousand feet, he drives the customer away from him in place of drawing him to him. The customer knows in advance what the retailer's price is, because it is published in bold type in the paper. He takes the ad. around to the retailer's competitors, sends it away to mail-order houses and manufacturers and asks them if they can do better than this; and most always they can, or will.

"Therefore, if the retail building material merchant pursues this policy of advertising the price, he is simply putting himself out of business, unless he advertises the price on the completed article, as practically every other merchant does who advertises price.

"My contention is that it would be mighty hard to go back in retail lumber history and find one single retail lumber merchant who had made a success of his business by advertising the price per thousand feet or per thousand shingles.

"To illustrate my point: Your farmer friend comes into your office and says, 'John, I am thinking of building one of these so-called Palouse barns. How much is lumber per thousand feet? Now, you know your customer, and if you know that man is going to buy the material from you, all right, go ahead and tell him how much per thousand feet it is, but if you have an idea, as is the case in many instances, that this farmer is going to other competitors, both local and foreign, for prices, then wouldn't it be better to pursue this policy: 'Why, Bill, how big a barn do you wish to build?

"When you get the dimensions, then take the material list and figure up the total cost of all the lumber and shingles, and make him one or two propositions as follows: The first, 'I will deliver to you here at my yard all the lumber and shingles for this barn for so much money. That's a price on the total amount it takes to erect the building. Or, 'We will furnish all the material and do all the work on this barn and furnish you the completed job for so much money.'

"Now, then, you've got him guessing. You are doing the things which other competitors of yours are not doing. If Bill writes to one company and says, 'another lumber company has offered to build me this barn, complete, furnishing all the material and labor for so much money; what will you do it for?' They will have to write and tell him that they can only quote on the material, they cannot furnish the completed job on the farm.

"There are many other illustrations I could give, but I presume you are as familiar with them as I am, if not more so.

"We agree with you that the price is put at the lower right-hand corner of an advertisement in small type for a purpose. It is just as Dr. Krebs says, the last argument in the sale. It is put there to clinch the sale if possible; but in all of these ads., you will notice the price is on the completed article, and that the advertiser has dwelt very strongly on the other salient selling features.

"You are absolutely right regarding the card game—always play your best cards last. Let the opponents exhaust themselves and take what tricks they can. Usually you can show your hand when you get ready and say, 'All the rest of the tricks are mine.'

"I am very fond of playing bridge and I usually notice that the inexperienced players—the amateurs—are the ones who always lose, because they jump right in and play their aces first, in place of trying to establish or set up a particular suit which they have. They are exactly like the retail merchant who shoots off all the ammunition he has by advertising in the paper the price per thousand feet.

"That's his trump card and it should be played last, at the time the order is secured. That's what he is playing the game for, isn't it?

"In regard to the lawyers in the law suit. I believe when the case is being tried before a jury, the last one to speak has some advantage, but when the case is being tried before a judge I believe this advantage is nil.

"When a retail lumber merchant advertises, he is trying his case before the great jury of consumers. If all he has to advertise is price, his case is lost.

"When you sell a bill of lumber to an individual, you are then trying your case before a judge, and the great argument that will count with the judge is the facts in the case; namely, the best building and the best job all completed for the smallest sum of money.

"I noticed a recent double page advertisement of Arkansas soft pine. They were talking about the price, and they say, 'If a salesman comes into your office and offers you lumber for $2.00 less than you can buy Arkansas soft pine, you feel that you are making a profit by saving this much money—$2.00 per thousand—but do you realize that if you paid us our price for our Arkansas soft pine—$2.00 more than the other fellows are charging per thousand—that you could sell it to the consumer for anywhere from $2.00 to $4.00 more than you can the other cheap lumber that you buy. Now, on which transaction will you make the most actual profit?' There's where their quality talk comes in.

"You could get a man probably for $30 a month and board to run one of your yards. Right off hand, one would say, that was mighty economical management; but you know and I know that that man would be the highest priced man you could employ.

"What the building material merchant wants to convince the consumer with is this: Not how low our prices are, or how cheap our stuff is; but, is the price high enough to be economical?

"I think the same thought is carried out when the general manager employs a man—is his salary big enough to be economical to this company?

"I saw the other day where a farmer built a silo that cost him about $800, filled it with ensilage and then it fell all to pieces. His net loss for the operation was somewhere around $2,000. What mattered it what he paid for the silo so long as he got a good job that would stand all the purposes for which it was erected.

"Every man or woman who builds a home or a barn wants a good, substantial, up-to-date job. They want good material and they can be convinced, I believe that if they buy too cheap and build too cheap, it is going to be very expensive in the long run.

"The price, of course, as you say, is an important consideration—a very important one—because it is the transaction by which you finally agree to trade your lumber for money; but my contention is that in the majority of cases, the trade will not come about by talking nothing but price, and it is still worse to advertise nothing but price.

"Now, if I am wrong in my contentions in these several communications to you, I want to be set right almighty quick, because I have outlined in these several communications the policy under which the Advertising Department of the Western Retail Lumbermen's Association is operating; and if it is a wrong policy, we are certainly off to a bad start, and if we the wrong, then Wanamaker and dozens of others have paid Dr. Krebs and others thousands and thousands of dollars to preach a wrong gospel to their salesmen.

"I have diligently tried to find for many, many months, the name and address of the retail building material merchant who has advertised price and price alone, per thousand feet, and made a success of his business during the period that he was carrying out this particular policy. Can you furnish me his name and address?"

# EDGINGS

## Ontario

The planing mill owned by Oliver & Ellis, at Listowel, Ont., was recently destroyed by fire, the loss, which included the planing mill, stable and coal and wood sheds, amounted to $2,000, on which there was insurance of $1,000.

Men are already at work cleaning up the debris of the Thorold Pulp Mill, Thorold, Ont., which was recently destroyed by fire. In a short time a handsome new fireproof structure will be standing in its place. The present staff of men will be kept on. The loss is not so great as was at first estimated.

E. B. Foss & Company, Bay City, Mich., report that they expect to have a stock of logs next season for the mill at Thessalon, Ont., which they recently purchased. This was formerly the mill of the North Channel Lumber Company. They state, however, that they have not yet made their plans for operating this mill.

The Riordon Pulp & Paper Company have started up a re-constructed nine-ton digester at their Hawkesbury mill, while a new digester of 12½ tons will be cooking early in January. This makes a total of five digesters of 12½ tons each, and six of 9 tons each at the Hawkesbury mill. The company have also installed a new wet machine at the Merritton mill. The building in which the pulp is finished has been rebuilt, bringing it up to a high standard of mill construction, and making it fireproof. The building is of cement and steel.

The Wells-Higman Company, of Traverse City and St. Joseph, Mich., who recently purchased 32 square miles of virgin timber situated on Batchawaung Bay, in the townships of Tilley, Archibald and Tupper, district of Algoma, Ont., report that they are now conducting logging operations on these limits. They put in their camps in October and November. They are also building 474 feet of docks. They will export a portion of the birch logs to Traverse City, Mich., for their plant at that point. They also contemplate the erection of a sawmill, shingle mill and veneer plant in Algoma. They now have 48 men in their camps.

## Eastern Canada

The name of the Chaleur Pulp & Lumber Company, Limited, has been changed by supplimentary letters patent, to the Cascapedia Pulp & Lumber Company, Limited.

Fire broke out in the large lumber yards of J. & W. G. Brown on St. Roch's Street, Quebec, on December 12th and caused considerable loss. For a time the flames threatened to spread through a number of other yards in the same neighborhood.

A report from Chatham, N.B., states that the J. B. Snowball Company, Limited, have sold their entire wintering stock of spruce, and their cut of spruce for next season to Messrs. H. R. Goodday & Company, Quebec, P.Q., through the agency of Mr. F. E. Neale, Chatham, N.B. The report states that the quantity of the transaction was in the neighborhood of 30,000,000 feet and that the price was well in advance of 1914 prices.

Mr. Wm. Mason, of Montreal, who has just returned from a business trip to Great Britain, recently expressed himself in an interview, to the effect that, after touring the United Kingdom he had concluded that the steamship freight rates at present prevailing for trans-Atlantic trade are almost prohibitive for the lumber business. Mr. Mason effected some sales of pit-prop timber, but is of the opinion that this trade is not likely to continue under normal conditions, the probability being that it will revert to Baltic ports, which can furnish pit-props at lower prices.

On December 18 at Quebec, the Montreal Trust Company sold by auction four lots of pulpwood, cut upon the Crown timber limits formerly held by the East Canada Power and Pulp Company, Murray Bay, P.Q. in liquidation. The D'Auteuil Lumber Company, Quebec, bought 10,000 cords of wood, cut by Messrs. Boivin and Deschenes in the vicinity of the River and Lake des Martes, and 5,500 cords cut by Gagne and Sons in the vicinity of the River and Lake Berley. The Donohue Construction Company purchased about 4,500 cords lying in the pond above the dam at Nairn Falls and lying in the Snigell River up to the chute on the river, as well as 8,900 cords cut by Delma Bedard on the Snigell River and Lake and vicinity and on the American River and Lake.

## Western Canada

The Medicine Hat Planing Mills, Limited, lost their stock room and its contents recently by fire. The loss is estimated at $10,000.

The E. R. Tait Shingle Company, Limited, have been incorporated in British Columbia with head office at Vancouver and authorized capital stock of $50,000.

The Canadian Trading Company, Limited, has been incorporated in British Columbia with head office at Vancouver, and authorized capital of $100,000.

The powers given to the company include the right to carry on business as timber merchants, lumber manufacturers, and sellers, etc.

There are over 2,000,000 feet of logs on the Northern Lumber Company's property at Fort George, B.C., awaiting the completion of the new mill which is under construction.

Sealed tenders are being received by the Minister of Lands of British Columbia up to February 10th, for the purchase of license X212 to cut 12,375,000 feet of timber on Cracroft Island, Range 1, Coast district. Five years will be allowed for the removal of the timber. Further particulars may be had from the Chief Forester, Victoria, B. C.

Sealed tenders are being received by the Minister of Lands of British Columbia, up to February 10th, for the purchase of license X250 to cut 3,371,000 feet of timber, adjoining Lot 1341, Call Creek, Range 1, Coast district. Three years will be allowed for the removal of the timber. Further particulars may be had from the Chief Forester, Victoria, B.C.

Sealed tenders are being received by the Minister of Lands of British Columbia up to January 10th, for the purchase of license X226 to cut 500,000 feet of Douglas fir and 50,000 railway ties, in the vicinity of lot 31, Lillooet district. Two years will be allowed for the removal of the timber. Further particulars may be had from the Chief Forester, Victoria, B.C.

Sealed tenders are being received by the Minister of Lands of British Columbia, up to February 10th, for the purchase of license X274, to cut 6,065,522 feet of timber and 21,200 lineal feet of poles, adjoining pre-emption record 1841, Prince of Wales Reach, Jervis Inlet, New Westminster district. Two years will be allowed for the removal of the timber. Further particulars may be had from the Chief Forester, Victoria, B. C.

Tenders are being received until January 14th by R. C. Desrochers, Secretary, Department of Public Works, Ottawa, for a supply of spruce, hemlock, white oak, white pine and British Columbia fir, to be delivered at Kagawong, Ont., in the district of Algoma. Specifications may be seen at the office of the district engineer, Confederation Life Building, Toronto; the Postmaster at Kagawong, and at the office of MacLean Daily Reports Limited, 25 Charlotte Street, Toronto.

---

A recent despatch from Chatham, N.B., says:—There is every reason to believe that there will be a substantial increase over last season's cut of lumber in New Brunswick this year. The Partington Company will cut upwards of twenty million feet on the Nashwaak and it is believed that the Miramichi Lumber Company's cut on the Southwest Miramichi and tributaries will be greater than that of last year. On the Restigouche, Tobique and St. Croix the cut will probably be slightly in excess of last year. Those in a position to know state that manufactured lumber is selling at a higher price now than has prevailed for several years.

---

H. B. Poussette, Canadian trade commissioner to the Argentine Republic, reports a considerable decrease in the imports of lumber from Canada. This is due to the inactivity of the building trade, which since the early part of 1913 has been gradually falling off and is now suffering from a veritable paralysis. It is unlikely that there will be any improvement in the imports of lumber for at least twelve months, as most of the dealers are carrying large stocks which they are unable to liquidate.

---

The white pine market at Buffalo is quiet and is not expected to show any increased activity until the holiday and inventory season is over. This should commence within the next week or two and result in a better volume of trade. Prices are not strong, as competition is keen. At North Tonawanda the trade slackened off during the past fortnight. There has been a fair volume of enquiries, however, for stock that is available for shipment.

---

The total amount of timber scaled in British Columbia during November was as follows: 50,799,915 ft. b.m. of saw logs; 304,367 lineal feet of poles and piles, and 13,651.94 cords of railway ties, shingle bolts and cordwood. The quantities exported were: 6,918,346 ft. b.m. of saw logs, and 72,670 lineal feet of poles and piles. Timber sales completed during November amounted to 14,035,605 feet b.m.; the total estimated value being $22,662.19.

---

Virginia uses more wood for boxes and crates than any other state, followed by New York, Illinois, Massachusetts, and California, in the order named.

---

Those familiar with the eastern misletoe only, have no idea of the great losses due to this parasite in the forests of the west, where it counts next to fire and insects in the amount of damage done.

Gurney Oxford Portable Bake Oven

# Well Baked Bread for the Boys

That's the first essential in Camp. Bread is the "Staff of Life" and one of the big food items. The boys eat bread three times a day and it's only right to serve it well baked. You can now have a swell Baking Equipment in your camp at an extremely low cost.

Consider a Gurney Oxford Portable Bake Oven for instance. When you want to shift Camp you can take it along with you, and for baking results, well you can't beat them. An all-over mineral wool packing guarantees an even baking heat. Loaves with a nice crisp crust and thoroughly baked through and through are the result. Gurney Bake Ovens are constructed for wood, coal or gas burning, are built to stand the wear and tear of Camp usage, and in sizes from 36 to 138 2lb. loaves at a batch.

You can have a very interesting book dealing with Camp Kitchen goods free. Send for one now.

# A Real Camp Range

Called the Vulcan. No doubt you have heard a lot about it already. With six ten-inch covers, an oven 25 x 28 x 16 deep and a tank heating 15 gallons of water as quick as you can use it, the Vulcan certainly is an ideal Camp Range.

It means that the cook can have meals on time and meals that are so well cooked that every one will beam with satisfaction. And the firebox will hold a stick 28 x 11". Some big stick, eh? Lumber Camps eventually use the Vulcan.

The quick water service, the splendid cooking results, the heavy build and the comforting heat it spreads over the camps are their reasons for insisting on the Vulcan. Would you like a free booklet dealing with Camp Ranges, etc? Ask for one now.

# This Heater Makes Cold Camps Cozy

It's doing that for hundreds of camps to-day. A warm glow in the mornings to cheer the Boys and a beautiful hot stove to sit round and smoke over during the evenings.

Designed specially for camp use with a firebox which will take an exceptionally large rough stick. It's made in three sizes, either one of which makes a very powerful heater. It will pay you to send for a book dealing with Camp Lines, sent free on application.

# Why A Time Record But No Belt Record?

**You require an accurate time and service record from each employee—why not from your belts, it is just as important.**

The "G & K" Belt Record System gives an accurate time and service record of every belt in your plant. It is a dead sure check on just what your belts are doing—it "shows up" every belt that "sojers" on the job.

Do not tolerate inferior or incapable belts, check up the "laggards," use the "G & K" Belt Record System, it is absolutely free. Consult us.

## What The System Is

The "G & K" Belt Record System shows at a glance the complete history of each belt in your plant—the makers name, brand of belt, width, length, purchase date, initial cost, on what machine installed, repair cost, in short it is the most comprehensive yet simplest system of its kind and adapted to every plant, large or small.

Remember that a systematic record of your belts is the only means you have of comparing the results of various belts. We welcome comparative tests, they will convince you of the large saving possible by the use of our modern efficient product.

**The coupon or your letterhead gets you further particulars by return mail Write us.**

# RUBBER GOODS FOR LUMBERMEN

**Belting** Our long experience in the making of Rubber Belts enables us to specialize on this line. "Monarch," "Red Strip" and "Lion" are our leading brands for power transmission. (Write for Booklet B-1.)

**Packings** "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable. (Booklet P-1.)

**Hose** for Steam, Water, etc., etc., in various grades, made especially to give satisfactory and economical service under different conditions. (Booklet H-1.)

**Fire Hose** One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion. (Booklet H-1.)

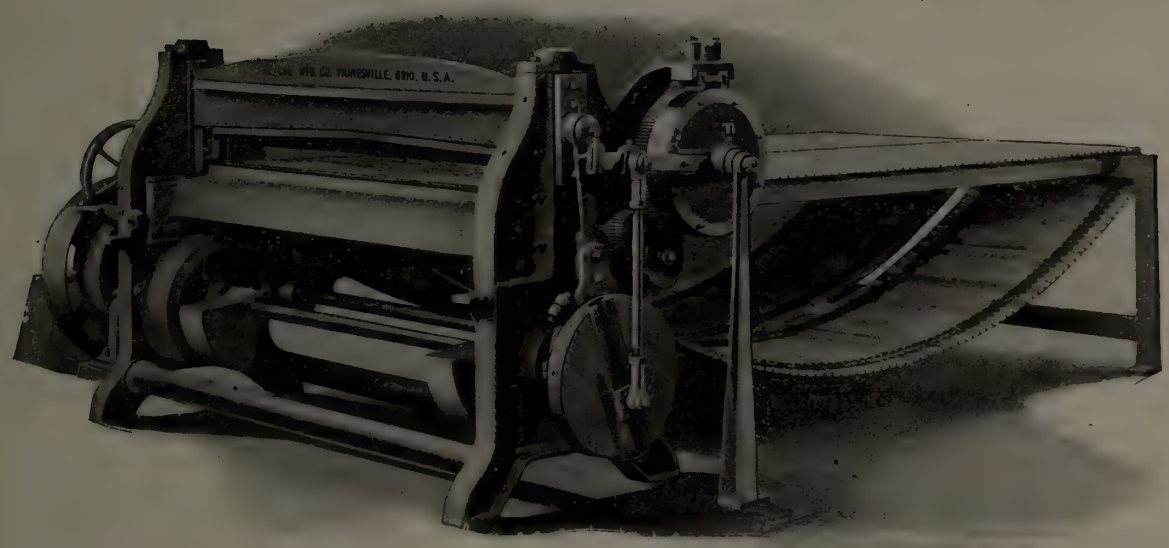
Veneer Machinery

# A New Improved Veneer Clipper



The illustration shows our new improved type "E" veneer clippper. The machine is sturdily designed with great strength and freedom from complicated parts. It will cut a thick bed of veneers and leave every sheet with a clean, smooth, square edge.

For crates and basket work this new clipper fitted with the automatic feed attachment is indispensable. The machines are furnished with a top roll which holds the stock firmly to the table in feeding under knife, thus preventing the stock from slipping.

The Automatic feature is simple, durable, positive in its working and entirely different and infinitely superior to any other kind on the market.

The clipper is built in the following sizes, 36, 42, 52, 64, 76, 88, 100 and 120 inches.

*Write us for catalogues of this and our other veneer machines.*

## The Coe Manufacturing Company

### Painesville, Ohio, U. S. A.

*Established 1850*

***The oldest and largest manufacturers of complete veneer equipment in the world.***

## Veneer Press and Dryer

Hydraulic and other Presses for mill and factory use. Built in all sizes or to suit special conditions

# A New Year's Resolution For You

*"RESOLVED that, during 1915 and thereafter I will give preference, in my purchases of rubber goods and all other material, to such as are made in Canada."*

---

So far as rubber goods are concerned, you run no risk in making this patriotic resolution, as we manufacture a complete line and the price, quality and style are right.

When in the market for tires, hose, belting, packing etc., let us show you what we can do.

It is our desire to serve you.

## "Wilson Bros." Flooring and Trim

"Wilson Bros." stamped on every piece of this flooring stands for Quality. Look for the name. Hardwood and Pine. **Interior Finish of All Kinds.** Also Hardwood Veneer Doors to detail. We are equipped to fill large or small orders on short notice. Write us for prices.

**Wilson Bros., Limited - Collingwood, Ont.**

# GOODHUE BELTING

## FACTORY TO YOUR MILL

TO the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts" then you will buy a "Goodhue."

According to the conditions under which a belt has to run we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality but each made for a different service

**Send for particulars and prices** **J. L. GOODHUE CO., LIMITED, Danville, Quebec**

# MAPLE LEAF SAWS

MAPLE LEAF SAWS, **"THE PROVEN BEST,"** absolutely guaranteed. Be sure and specify Improved Racer Cross Cut Saws when ordering your camp supplies. They are made of Razor steel and tempered by our secret process, which gives the best results under actual working conditions in the bush.

**Shurly-Dietrich Co., Limited,** Galt, Ontario

**Branch: VANCOUVER, B.C.**

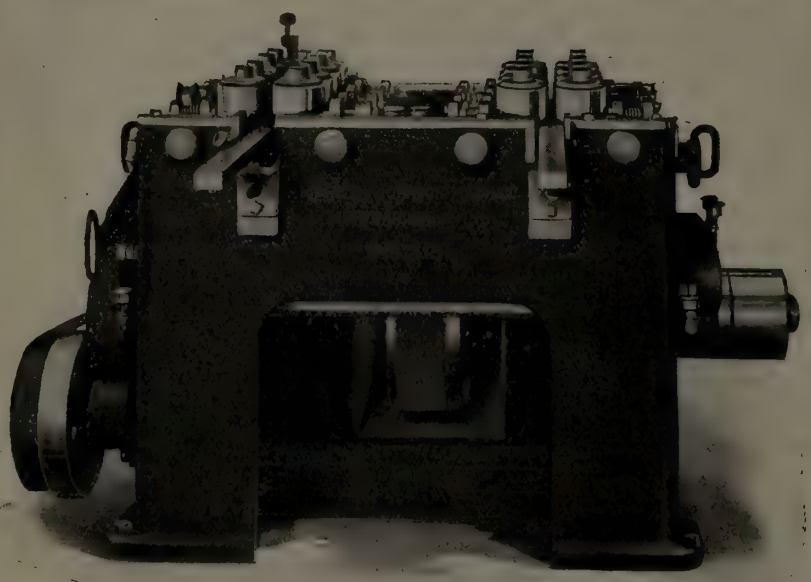
# Box Board Matcher



Let us mail you catalogue of Box Factory Machinery and Horizontal and Vertical Re-saws.

**Mereen - Johnson Machine Co.**

MINNEAPOLIS, MINN.

"To be, or not to be, that is the question,
Whether 'tis nobler in the mind
To suffer the slings and arrows
Of outrageous fortune,
Or to take arms against a sea of troubles." —Hamlet.

**Hamlet the Prince of Denmark is a character which**

every budding actor aspires to play. The late Sir Henry Irving certainly inspired many to study the works of Shakespeare and those who were privileged to hear him in Hamlet's famous soliloquy are not likely to forget it. Most of us have been in a state of doubt on many occasions and said to ourselves: The question is:

**TO BE, or not TO BE**

We can serve the interests of our customers who use Babbitt Metals and recommend without any hesitation.

# Harris Heavy Pressure

*The Babbitt Metal Without a Fault*

**Engineers using H. H. P. avoid a sea of troubles.**

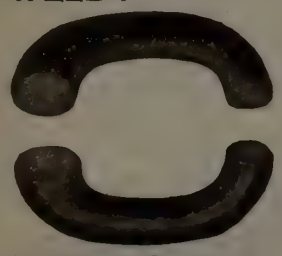
# "AJAX" Loading Chain

**WELD:**



Sectional view showing comparative size of weld and chain.

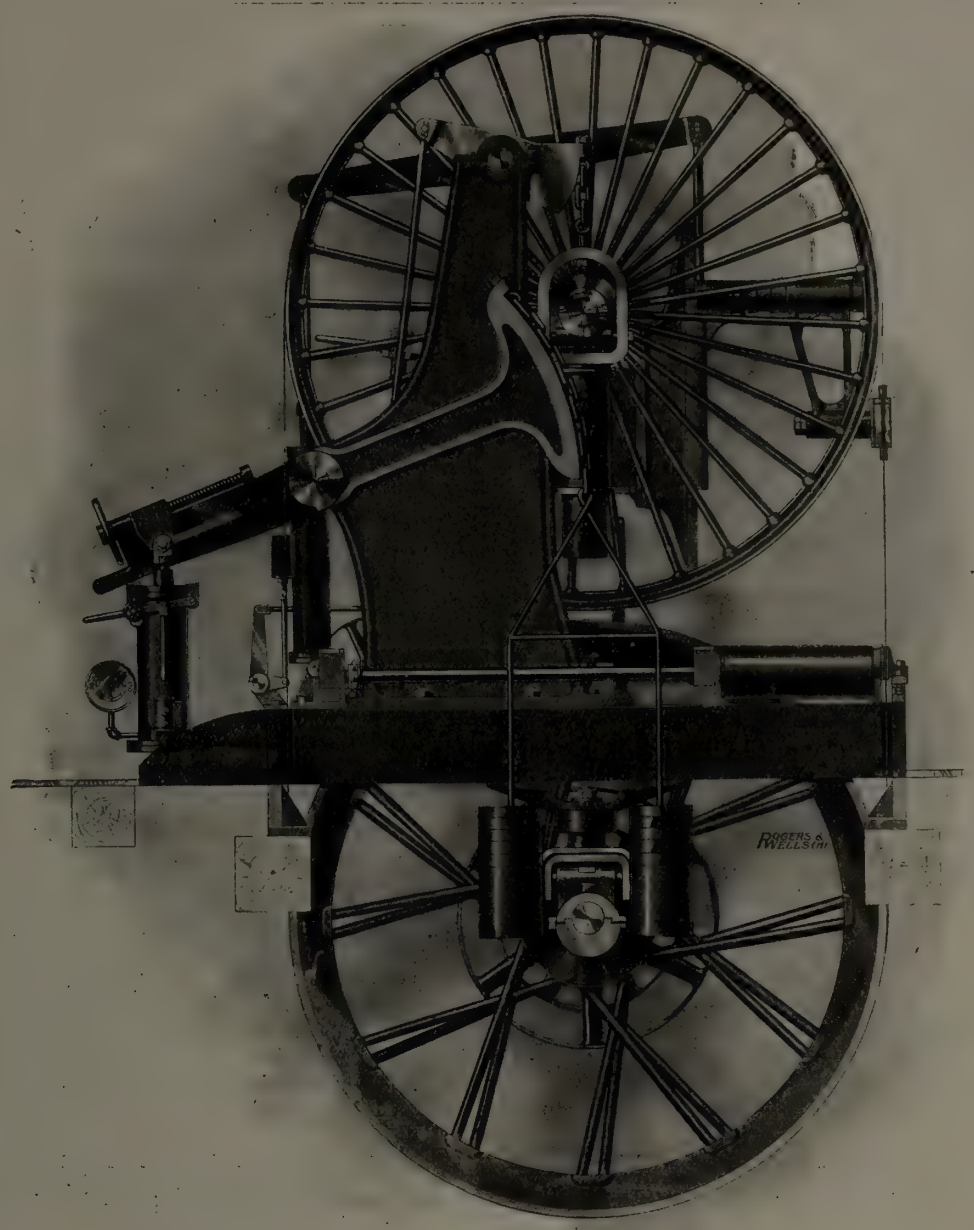
Experience has taught us that a good chain cannot be made from cheap material. In Ajax chains you get the best steel obtainable and every weld guaranteed. Ajax chain is guaranteed to pull stiff before breaking.

MANUFACTURED ONLY BY

**Standard Chain Company, Pittsburgh, Pa.**

MONTREAL—Alexander Gibb, St. Nicholas Bldg. WINNIPEG—Bissett & Loucks
VANCOUVER—John Burns, 329 Railway St.

# The Steam Tension Band Mill



It is called the steam tension mill because the tension is maintained by steam—the most sensitive form of tensioning which has been devised.

The result of this is a great saving in saws—**several users of the machine have run through an entire season without cracking a single saw.**

But in addition to raising and lowering the top wheel by steam, there is a separate cylinder for operating the top guide, and these two cylinders make ours an entirely steam-operated mill, and, therefore, exceptionally fast.

It is made with 8 ft., 9 ft. and 10 ft. wheels, and will stand thorough investigation.

Write for bulletin and list of users.

### Peterborough, Ontario

# Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

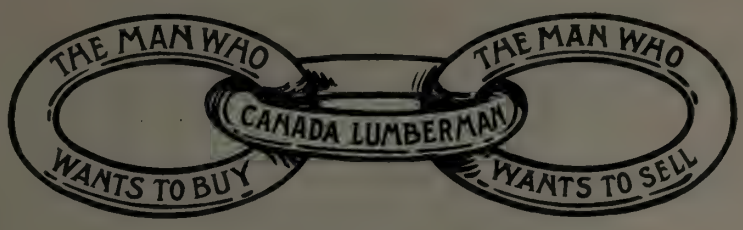
And 5 per cent. on the sale of all other products of the berth.

# Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

**W. W. Cory,**

Department of the Interior, Ottawa, Deputy Minister.
December 20th, 1912.



# The Connecting Link

Way back in 1880 the **Wanted and For Sale** columns of the Canada Lumberman and Woodworker were used extensively by the lumbermen of Canada for the purchase and sale of timber, lumber and machinery.

Time has but served to enhance the value of this medium, until to-day the **Wanted and For Sale Department** of the Canada Lumberman has become a national market.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide field, the percentage of waste circulation for advertisers has been reduced to a minimum.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

**Canada Lumberman & Wood Worker**

# Let Steam Do the Work When You Shift Your Guides

**—It's Done on the Waterous "New Model" Bandmill**

The latest improvement added to our Bandmills—

## THE WATEROUS STEAM RAISING DEVICE

Your sawyer is only human. If he gets tired at the end of his shift and does not move his guide with a smaller log on the carriage, don't blame him. Give him a steam cylinder to do the work—instantly, and without an effort on his part—and you can be certain that he will keep the guide just where it should be—*close to the timber on the carriage.*

**The Waterous Steam Raising Device** is the quickest, surest-acting guide shifter being built. Pull up the lever and up goes the guide, press it down and the guide drops. The valve is designed to balance both sides of the piston. Release the valve and the guide stops dead—and stays there without a shift.

That's how the **Waterous Steam Raising Device** has simplified guide adjustment on the bandmill. It means more lumber and better lumber for every hour of the day's work.

The Waterous "New Model" Bandmill is supplied with this attachment. Where it is in use, in some of Canada's fastest cutting mills, it has more than made good. **We can attach it to your bandmill no matter what make it is.**

This device is worth more than casual notice, it is fully described in Bulletin No. 1021.

***Notice the Rotary Engine that drives the wheel raising device. That's another Waterous feature. The bulletin describes it, too.***

# "AMPHIBIA"

## The Waterproof Belt That Grips Your Pulleys

In buying a belt remember that you are not making a purchase where a few dollars saved on a lower grade article is a real saving. You are buying a medium to carry the most expensive thing in your plant—power. Nothing but the very highest grade of leather belting should be tolerated.

"AMPHIBIA" waterproof leather belting is pliable, firm with minimum stretch and maximum tensile strength and durability.

"AMPHIBIA" grips the pulleys perfectly and transmits more of your power than other belting.

"AMPHIBIA" belting is particularly suited to the difficult runs in saw mills, pulp mills, veneer plants and other industries where wet or green lumber is handled.

When ordering state where the belt is to run.

"AMPHIBIA"

**To the Owner of Timber Lands**

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

## MORRIS TRAVELING CHAIN-BLOCK.

*TRAVELING CHAIN-BLOCK HANDLING LUMBER*

The Morris Traveling Chain-Block is a simple, efficient and economical means of lifting and shifting loads of all kinds.

It can often be used on an existing roof beam, in which case the cost of installation is almost negligible.

Or we can furnish an inexpensive frame, as shown in the illustration, for independent use in the open.

We make traveling-blocks in various capacities up to 20 tons, and we have them in stock to suit practically any ordinary I-beam.

**SHALL WE MAIL YOU BULLETIN B9?**

**THE HERBERT MORRIS CRANE & HOIST COMPANY, Limited,**
EMPRESS WORKS, PETER STREET, TORONTO.

## Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

## Keep Tabs on an Aloxite Saw Gummer

Put it on a filing machine and give it the saw-filer's test.—Note how quickly and easily it does its work—cutting clean and fast.—

Test it out for its cool-cutting qualities, see how it frees itself without undue friction or rasping even under heavy feed.—Note how it holds its shape. Keep a record of how long the wheel lasts and the number of saws it gums and you will realize that you have

# The Moreau Barking Machine

The Moreau Barking Machine is entirely in a class by itself as the most economical and efficient barking equipment made.

As compared with other rossing devices the Moreau machine requires half the power to operate it for over twice the out-put, and eliminates the time consuming and costly operation of boiling logs.

Used in conjunction with a pulp wood plant the Moreau Barking Machine will show surprising results. A valuable feature of this outfit is that it is readily portable to any point in the woods—at the railway siding or wherever shipping facilities are offered. Its own weight is sufficient to hold it in place when in operation.

The Illustration shows the Barker at work by a siding with logs being loaded direct from the machine to the cars.

# Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

**We have the following Sawmill Machinery for sale:**

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

## FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

# The Steam Tension Band Mill

It is called the steam tension mill because the tension is maintained by steam—the most sensitive form of tensioning which has been devised.

The result of this is a great saving in saws—**several users of the machine have run through an entire season without cracking a single saw.**

But in addition to raising and lowering the top wheel by steam, there is a separate cylinder for operating the top guide, and these two cylinders make ours an entirely steam-operated mill, and, therefore, exceptionally fast.

It is made with 8 ft., 9 ft. and 10 ft. wheels, and will stand thorough investigation.

Write for bulletin and list of users.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 35 Toronto, January 15, 1915 No. 2

# Profit is the Life Blood of Trade

Contradictory as it may appear on first consideration, there is a great deal of wisdom in the advice given recently to the lumber trade by a prominent British Columbia lumberman, who, in the course of a few remarks upon the present trade situation in the west said, "the way to sell lumber is not to try to sell it at all." The almost frantic efforts, among manufacturers who have over-produced, to sell their stocks even at a loss, has caused a great deal of the trouble which has come to the trade of late years. We do not intend to enlarge to any great extent upon this point, but to use it as a peg upon which to hang another idea, namely, that the effort of the salesman should be, not to sell his lumber, but to find out what his customer wants and give it to him. There are two broad principles in connection with the business of selling lumber. One is the principle that the purpose of having a customer is to sell something to him. The other is the principle that a customer exists in order to have his requirements filled. Whichever way one may look at it the matter resolves itself of course into the selling of lumber, but the predominant idea in the mind of the salesman, as well as in the mind of the purchaser, should be a consideration of the fitness of the stock under discussion for filling the particular requiremetns of the moment. When you come to think of it, in the making of a deal for the purchase of a quantity of lumber, how often is it not the case that the salesman is devoting his thought and energy to the consideration of prices, while the purchaser is thinking both about price and quality?

We would like to add therefore, to the above piece of advice, and also to alter it slightly so as to read in the following manner:—"Stop trying to move your stocks of lumber and commence trying to see how many consumers you can help to find the exact stock which they require." There is the whole matter, we believe, in a nutshell, and we have the concurrence of several successful lumbermen in our belief. If you have once got hold of this idea of giving quality, or service, or satisfaction, or whatever you like to call it to your customers, its influence will make itself felt in connection with everything else you do. It will not be long either, before it will make your business much more like a pleasure than it used to be and will go a considerable distance towards removing some of the general depression of the lumber business.

For the sake of enquiry, simply follow the idea through the lumber industry. Consider the effect this policy will have on one salesman and his work. Multiply this many times until the effect becomes noticeable upon the whole trade. Soon the manufacturing end of the business will be affected. Imagine, if you can, a whole manufacturing district devoting itself to these principles. Will it not soon come about that the manufacturers will understand far more clearly the requirements of the market and be able to regulate their operations more in accordance with the demands? Will not the selling costs be reduced and the manufacturer be able to make a profit on much of the stock which to-day is sold at a loss. We believe these are simple truths, yet though they are simple, the appliction of the remedy is something which few men think they can put into effect. The time is at hand however, when some steps of this sort are necessary and urgent. We cannot lift ourselves by our boot straps, no matter how strong we may be. A great lumber manufacturing concern cannot keep in business indefinitely no matter how large its resources may be, unless its life blood, the profit from each individual sale, is maintained at a sufficient level to pay all expenses, dividends, and some profits.

Making lumber and selling it must be reduced to a simpler proposition than it has been in many parts of Canada for some years past. It must become a matter of restricting production, maintaining price and acting in a reasonable spirit of co-operation so as to enable everyone to do business safely. The way things have been going in many quarters has resulted in a struggle for the survival of the fitttest. Too much attention has been given to the selling business and not enough to the giving and securing of value. "Turn-over" has been the great God of the lumber business instead of profit, and profit depends upon service. This applies to western Canada more than to the east, yet some manufacturers and salesmen in the east cannot afford to point the finger of criticisms at their fellows. We have heard a great deal about the effect of the war, the competition of substitutes, the inroads of yellow pine and other evils which have beset the trade in Canada for some years. They have all had their places of importance, but when it comes down to a matter of self examination, how many lumber manufacturers and salesmen, either in the east or in the west, can say with a clear conscience that their influence has been all in the direction of improving the tone of the lumber trade, helping it to feel some respect for itself, in short trying to give value whether business was won or lost. These remarks are not cynical. We know as well as anyone else that there are a lot of good men in the lumber business in the east and in the west, who can hold up their hands in this manner and say that they have been on the right side and have fought hard to get others to join them, but still the old story is heard in many quarters that there are too many men who are ignoring these plain business principles and too many men who do not know enough about the selling business to understand these principles, who are therefore injuring themselves, their employers, their customers and the trade in general.

Is there any remedy anywhere for this state of affairs? Is it possible to bring the members of the lumber trade to such an appreciation of these principles as will induce them to put them into general practice? We see only one practical remedy, namely, co-operation. We would like to see a far greater development of the association spirit in Canada than there has been in the past. There should not be so much individual standing aside from association work as there is in Canada to-day. In the United States the tendency is all in the other direction and great benefits are resulting. There may be something in the Canadian character which makes a Canadian naturally averse to the association idea, or it may be that Canadians have not as yet appreciated the results which have been secured across the border. Whatever the reason may be, there is not, in Canada to-day, anything like the co-operation that there is in the United States. It would be a good thing for the lumber industry in Canada if the asso-

ciation idea could be developed far more extensively. It would reduce many of the ill effects of such periods of depression as the present. The great basic idea of the association movement is co-operation of many individuals with a view to giving better service to the public. This principle should be worked out more extensively in Canada. Unquestionably it will be developed in the course of time. We would like to see it developed as rapidly as possible. It will lead to better trade conditions all around and will be an important factor in the prevention of over-production, profitless selling, and the liquidation of enterprises which might have been run successfully.

# Lumber Exports Increased—Imports Decreased

For the six months ending with September, 1914, Canada's imports of wood and manufactures of wood, free of duty, were valued at $6.800,117, against $9,778,589 in the corresponding period of 1913, and $10,520,429 in the corresponding period of 1912. The dutiable imports under the same heading were as follows: 1914, $3,189,548; 1913, $4,571,324; 1912, $4,376,826. Some of the important divisions of these imports were as follows: pitch pine, 1914, $1,194,957; 1913, $1,809,840; 1912, $1,234,578; planks and boards, free of duty, from the United States, 1914, $1,787,426; 1913, $2,753,330; 1912, $3,261,030; oak lumber and timber, free of duty, 1914, $971,896; 1913, $1,486,015; 1912, $1,651,697. The total imports of lumber and timber free of duty, from the United States were valued as follows: 1914, $5,022,391; 1913, $7,210 263; 1912, $7,916, 947. Imports of fence posts and railway ties. free of duty, were valued as follows: 1914, $895,057; 1913, $1,365,526; 1912, $1,147,205.

Canada's total exports of wood and manufactures of wood, the produce of Canada, for the six months ending with September were valued as follows:—1914, $28,470,198; 1913, $27,592,444; 1912, $26,-825,549. Of the above the exports to United States were valued as follows:—1914, $21,124,490; 1913, $18,318,333; 1912, $18,158,986.

Among the divisions under the heading of wood and manufactures of wood were the following:—

Pine deals to the United Kingdom:—1914, $760,123; 1913, $737,-301; 1912, $929,234;

Spruce deals to the United Kingdom:—1914, $2,871,285; 1913, $3,749,443; 1912, $2,671,031.

Spruce deals to the United States:—1914, $441,785; 1913, $344,-046.; 1912, $499,714.

Laths to the United States:—1914, $1,106,025; 1913, $919,188; 1912, $928,071.

Planks and boards to the United States:—1914, $9,093,527; 1913, $8,201,722; 1912, $8,650,347; Planks and boards to the United Kingdom:—1914, $949,873; 1913, $1,272,095; 1912, $1,051,030.

Scantling to all countries:—1914, $842,371; 1913, $826,694.

Shingles to the United States:—1914, $1,582,015; 1913, $690,968; 1912, $756,195.

Total lumber exports to the United States:—1914, $12,944.467; 1913, $10,933,142; 1912, $11,690,936.

Total lumber exports to the United Kingdom:—1914, $5,136,301; 1913, $6,361,632; 1912, $5,158,187.

Total exports of Canadian timber to the United Kingdom:—1914, $326,989; 1913, $177,449; 1912, $883,814.

Pulpwood to the United States:—1914, $3,639,228; 1913, $4,415,-186; 1912, $3,626,306.

Wood pulp to the United States:—1914, $3,437,580; 1913, $1,976,-240; 1912, $2,037,552.

Wood pulp to the United Kingdom:—1914, $606,652; 1913, $507,-108; 1912, $568,559.

# An Important Utterance Regarding the Lumber Industry

For the lumbermen of British Columbia in a particular sense, and for the lumbermen in all parts of Canada in a more general sense, the address recently delivered by Mr. H. R. MacMillan, chief forester for British Columbia, before the Western Forestry & Conservation Association (which is published elsewhere in this issue) is one of the most important and interesting utterances that have been made in many years. In the first place, the importance of Mr. MacMillan's review of the situation of the lumber industry in the west is due to the fact that it presents the opinions and the conclusions of a man who represents the government of British Columbia. His remarks in regard to the regulation of the price of lumber and other cognate matters must be given their full importance, indicating as they do that the government of British Columbia realizes that in some direction tending towards the regulation of prices so as to prevent the widespread sale of lumber at a loss, the future salvation of the lumber business on the western coast must be found. With Mr. MacMillan's views upon this point in mind it is natural to feel that the lumbermen of British Columbia will, so soon as they find ways of putting their business on a better basis, come to the conclusion that they have no cause to fear that the government will interfere with them in any reasonable efforts to provide that in future the price of lumber shall never go down to a figure which makes it impossible to carry on business without loss. Of course any such course as this would require not only the assistance of the lumbermen of British Columbia, but practically those of the whole Pacific Coast. The interesting point however, is that the importance of this fact has been brought home by a high government official both to the lumbermen of British Columbia and those of the Pacific Coast States.

So many circumstances have contributed towards bringing the industry in the west to its present depth of depression that the price situation is in reality only the concrete indication of the net result of all these factors in combination. The key to the whole situation apparently is the over-production or rather the capacity for over-production of the Pacific Coast mills. Mr. MacMillan's address outlines the factors which have led to this situation, going into details in connection with a number of them, in a manner which has never been attempted before. He speaks with the authority of a man who has made these matters his life study and has exceptional opportunities, on account of his position at the head of the forestry service of the province, to study the evils and the remedies which they necessitate. His address is characterized to a most important extent by a realization of the fact that the government is the partner of the lumberman. When lumber is being sold at a price lower than the cost even of the logs from which it is manufactured, the government is losing money as well as the manufacturer.

Second to the importance of the address from the above points of view, its importance comes also from the fact that it lays before the people of the west a very plain proof that upon the lumber industry depends to a great extent the welfare of the people themselves. At prsent "the whole public suffers with the lumber industry. It is a public necessity that the industry be put upon a more profitable basis." To put the matter in a nutshell from the point of view of profit, "the low price of forest products is brought about by unrestrained competition between producers of these products, by the existence of a manufacturing capacity far in excess of the market demands, by a competition between lumber and substitutes, by high transportation charges, and by an important selling organization. There is sawmill capacity in the Pacific northwest capable of manufacturing 15,000,000,000 feet of lumber annually. The natural market demands never exceed 10,-000,000,000 feet annually. One-third of the sawmills must stand idle all the time. Lumber prices are kept low by the bitter fight maintained by mill owners to keep their mills in the operating column." If these remarks had been made by a manufacturing lumberman who had been through the troubles of the last few years and knew from bitter experience the truth of what he was sayong, they could not have been put more forcibly or clearly. Coming from the chief forester of British

Columbia, they must carry added conviction for they mean that the state of the industry has become so widely known and a matter of such vital importance to everyone in the west that the government is now fully cognisant of it and of its meaning. It is too late now to ask why all these mills were built. They are there as a result of over-confidence, over-speculation, and on account to a great extent of the cost of carrying timber. "Investments in standing timber produce no annual income." To meet the increasing tax rates, interest charges, cost of fire protection, etc., there must be continual investment of further capital. Timber must be turned into cash even at a loss; so, many mills have been built which cannot be run profitably.

We have tried to indicate here a few of the chief points in the admirable address presented by Mr. MacMillan. The address is one which will not only repay reading by the lumbermen of Western Canada, or even of Eastern Canada, but must also prove of interest even to those who may not be closely concerned in the facts which it sets forth. We have tried in these columns from time to time to set forth some of the same facts. They are facts which must be repeated over and over again before the public will appreciate them fully, and learn to act upon them. We believe however, that as a result of their having been so clearly put forward by the Chief Forester of British Columbia, lumber manufacturers and the public will realize their importance more definitely and more quickly. Mr. MacMillan's statement of the case has probably brought nearer to us, by many months, the time when something will be achieved, of a definite and important nature, in the direction of putting the industry on which British Columbia depends so largely for its welfare upon a permanently profitable basis.

# Campaign Against Substitutes a Vital Issue

While we have said a great deal lately in these columns about the campaign of the manufacturers of substitute materials against the use of lumber, and about the efforts which are being made by lumber manufacturers both in Canada and the United States to meet this situation, we have not been fortunate enough to present so strong and convincing a statement of many of the aspects of the situation as was given lately by the Chief Forester for British Columbia in an address before the Western Forestry & Conservation Association. His reference to the competition of substitutes was by way of giving one of many reasons for the low price of lumber which has prevailed for so long a time in Western Canada. Outlining the development of the present situation he called attention to the fact that, as timber becomes scarcer, lumber prices and stumpage prices should increase. "So argued the lumbermen who had seen it happen in other districts. These lumbermen did not foresee that competition between many manufacturers would keep the lumber prices down. They did not take sufficiently into account two other very important factors, transportation costs and substitutes. . . . . There is but little hope of getting freight rates reduced, therefore we must concentrate our energies eleswhere and prepare to hang on until Eastern timber is approaching exhaustion, when lumber prices in our chief markets may be expected to increase.

"We shall then as now have to fight the lumber substitute. Substitutes have undoubtedly decreased the consumption of lumber for building operations. Only twenty years ago 95 per cent. of our building materials were made from forest products; now the forest supplies only 65 per cent. Substitutes have gained alarmingly on the lumbermen in the past decade. Commercial reviews show that there was an increase in building operations in North America during the years 1909 to 1912, yet the consumption of lumber per capita decreased one-seventh in this period. No such decrease has ever been suffered by the promoters of substitutes; while lumber use has been going down, substitute exploitation has been going up. From 1899 to 1912 the consumption of cement increased 240 per cent. From 1909 to 1912, while lumber decreased fifteen per cent., cement consumption increased thirty per cent. The use of other substitute products increased in like degree; steel bars for reinforcing increased 72 per cent. from 1909 to 1912; substitute roofings and sheetings increased 200 per cent. from 1899 to 1909.

"The most important factors in the increasing use of substitutes for timber are advertising, education and salesmanship. The substitute, be it tin shingle, metal siding or cement, is advertised constantly before the eyes of everyone. It is specified by architects and engineers who are educated as to its qualities but who have received no education in the qualities and use of woods. It is sold by clever selling campaigns aimed directly at and reaching the consumer. The proprietors of substitutes for lumber sell their products. The lumber manufacturer waits for someone to buy his.

"The public is now responding to the well planned and aggressive educational campaign upon which the proprietors of wood substitutes have expended $3,000,000 per year. If even you lumbermen will give a moment's thought you will recall that you have been educated to cement foundations, cement sidewalks and roadways, rubber or metal roofing, metal interior trim, metal furniture. You will admit that the substitute people have reached out, seized upon your distributing agent, the retail lumberman, and have within five years under your very noses, in very many cases, made of him a more aggressive distributing agent for substitute products than he ever was for lumber. Nearly a third of the retail lumberman's houses are now in lumber substitutes.

"You must admit that the manufacturer of substitutes has judged the problem aright. He has not been afraid to employ high priced engineers to study the possibilities of the market, to produce the product that would sell to the best advantage, or to employ high priced salesmen who have organized, as you must admit, selling organizations which hypnotize the purchaser and produce in him the desire for Somebody's roofing, So and So's shingles, and which at the same time by pointing the road to profit inspire the retailer with an energy and ambition for handling these products. This successful campaign is financed on $3,000,000 a year for the continent, only a fraction of the sum the lumber industry of the Northwest has lost in 1914."

After a further consideration of several other factors in the maintenance of a low price level for lumber the Chief Forester for British Columbia said:—"The success of this programme depends upon being able to donate to constructive salesmanship the energy which, in the lumber industry, is now donated to price-cutting competition, destructive salesmanship. The lumberman's competitors would not be able to carry on this successful selling organization if they were not allowed to fix their prices at a profitable level and devote a proportion of their receipts to market extension. Lumbermen cannot maintain their industry in successful competition if they are not permitted to adopt the methods of their competitors."

---

A report from Kansas City, Mo., states that a local firm has secured a contract to furnish 5,000,000 feet of timber to be shipped to England. The lumber will consist chiefly of ties and mine timbers. The timber, it is said will be shipped to Port Arthur, Texas, for transportation to England.

---

Monteith Bros., Rosseau, Ont., report having recently completed the sale of 2,000,000 feet of peeled hemlock logs at a very satisfactory price. Referring to the market for railroad ties they report that many operators who took out ties during the past year now find that the railways do not want to buy them. In some cases, where railways had given orders for ties, they are now doing their best to persuade the operators to allow the orders to be cancelled.

---

Mr. J. P. Dupuis, of the lumber and sash and door firm of J. P. Dupuis, Limited, Verdun, P.Q., is a candidate for the Mayoralty of the town of Verdun. Mr. Dupuis was at one time in the employ of the Tobin Manufacturing Company, Bromptonville, P.Q., and of the Montreal Box Company. About six years ago he purchased the business of ex-Ald. Marchand and the Verdun Lumber Company, which subsequently became J. P. Dupuis, Limited. He is also president of Dupuis & Poirier, Incorporated, lumber merchants, Cote St. Paul.

## Government Inspection of B.C. Lumber Cargoes—A Criticism

Editor Canada Lumberman: Vancouver, B.C.

Our attention has been called to an article published recently under the name of Henry Pearce, and, as a false impression may be made in the public mind, I desire to state the views of our company which I might say are those of other lumber exporters. I refer particularly to the matter of government inspection advocated by Mr. Pearce.

In the first place, if there were no system of inspection in force to-day, Mr. Pearce's suggestion would be open to many obvious objections, which it is unnecessary to point out on account of the fact that a very satisfactory system does exist. The Pacific Coast Inspection Bureau, which is well established and known throughout the lumber world as thoroughly reliable, and both buyer and seller accept the Bureau's certificates without any question. A British Columbia Government Inspection Bureau could only be established in competition with the existing system, and the dissatisfaction and confusion that would arise in the trade can readily be imagined.

Mr. Pearce's statements regarding bankers saying they could handle the finance better, and that shipowners say they could quote freights better, are absolutely contradicted by the experience of the resent exporting mills.. No valid compalints have been made regarding the fairness of the certificates of the P. C. I. Bureau. It is true that some B. C. mills have shipped lumber of a better grade than the order called for, but that is not the fault of the Bureau. The subsequent complaint of the buyer, on receipt of a second cargo strictly up to grade ordered, but not as good as previous shipments, is the only complaint that we have heard regarding the P. C. I. Bureau, but, in view of the above explanations, such a complaint should never have fairly been made.

Mr. Pearce's appeal to "Little Britishers" may reach some of his readers, but it does not affect the opinions of the men actually engaged in the export trade. On the contrary, the other idea, is also British, namely, utilize anything, anywhere, regardless of nationality, that fills the bill—our own if possible, otherwise that which our neighbor has developed.

British Columbia cannot hope, or expect for many years to wrest from the Northwestern United States the premier position they enjoy in the lumber export trade. Our lumber is the same and we serve the same markets, and until their cut declines and ours expands, to figures notably different from present figures, our export trade will have to follow the grading rules and price conditions of our competitors.—B. C. Lumberman.

## Birch a Fine Wood for Wagon Gearing

In the Canada Lumberman of January 1st an interesting letter was published, written by one of its readers in the State of Ohio and dealing with the use of birch in connection with the manufacture of dump wagons. It will be recalled that a number of our readers have been carrying on an interesting discussion in regard to the suitability of birch for dump wagon stock, some maintaining that it is an excellent material for this purpose and that United States manufacturers are using it and selling their dump wagons in Canada in competition with dump wagons made in Canada in which the manufacturers use practically no birch, but a great deal of United States oak at a higher price. The writer of the letter in our January 1st issue, in a subsequent letter says:—"I do not think it is necessary for Canadian manufacturers to look for anything better than birch for their gearing, and in fact they are paying big prices for material that is really not so good, when they are buying oak. Of course some oak is as good, or possibly better than birch, but the percentage of that class of oak on the market at the present time is small and, as stated before, all of the oak that is manufactured is cut by operators who felled the timber both winter and summer, and oak timber which is felled in the summer time will always be subject to powder post when the sap gets thoroughly dry.

"I have seen quartered oak tables that no doubt were considered very fine when made, but having a little streak of sap on the edge of the piece, this developed a hole in the middle of the table."

## Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

1261. **Wood or other articles.**—A French agent would like to represent Canadian concern of wood or other articles.

1266. **White pine doors.**—A firm in New York desires the names of manufacturers in Canada in a position to export white pine doors.

1267. **Excelsior.**—A firm in Birmingham is open to receive immediately quotations for 600 long tons excelsior, free from turpentine, for packing eggs, prices c.i.f. Liverpool or Alexandria, Egypt, if possible.

1268. **Pulp.**—A Bristol firm wishes to represent Canadian exporters of pulp.

## Sir George Halsey Perley, K.C.M.G.

Among the new Knights created by King George the V., and included in the New Year's honors was Sir George Halsey Perley, K.C.M.G., Acting High Commissioner for Canada. Outside of his political activies, Sir G. H. Perley has been known throughout Canada during his business life as one of the most successful Canadian lumber manufactuerrs, having been the head of the firm of G. H. Perley & Company, lumber manufacturers, Ottawa. A few years ago the manufacturing operations of the Company at Calumet, P.Q., were combined with those of the Riordon Paper Company under the name of the Riordon Pulp & Paper Company, now operating one of the finest mills in the Ottawa Valley, as well as large pulp and paper plants at Hawkesbury and Merriton, Ont.

Sir George Halsey Perley is also vice-president of the Hull Lumber Company and Reed Timber & Lumber Company and was the promoter of the Argenteuil Lumber Company and the Arundel Lumber Company. Among his other business interests, Sir G. H. Perley is a director of the Bank of Ottawa. He has been actively interested in many large financial and philanthropic projects, having been chairman of the two Ottawa Fire Relief Funds, and having taken a special interest in the work of the Canadian Association for the Prevention of Tuberculosis, of which he is vice-president.

Sir G. H. Perley has been known to Canadians probably more of late years as a politician than as a business man. His present position as Acting High Commissioner for Canada in Great Britain is a recognition of his valuable services to Canada. He assumed the duties of this office after the death of Lord Strathcona. He is a member of the Borden Government, being a minister without portfolio. His political career commenced in 1910 when he unsuccessfully contested the riding of Russell for the House of Commons. Since 1904 he has represented Russell in the House of Commons. He was chief whip of the Conservative party until 1911. Sir G. H. Perley was born in Lebanon, N.H., in 1857, and was educated at the Ottawa Grammar School, and St. Paul's School, Concord, N.H., and Harvard University. His family has been associated with the lumber business for many years, his father having been one of the largest operators in the Ottawa Valley. Formerly the firm was known as Perley & Pattee, of which his father was the senior partner.

## Wm. Price Now a Knight Bachelor

Among the Knights Bachelor included in the recent list of New Year's honors was Mr. Wm. Price, of Price Bros. & Company, Limited, of Quebec, P.Q., one of the most successful lumbermen in Eastern Canada. Sir Wm. Price was born in Chili in 1867 and was educated in Canada. He entered the firm of P. Price & Company, lumber merchants, Quebec, in 1886, and on the death of the Hon. E. J. Price in 1899, he became the sole partner. He is also the president of the Jonquiere Pulp & Paper Company and has such far-reaching interests in the lumber industry of Quebec that he is frequently referred to as "The Lumber King of Quebec." In the political field, Sir Wm. Price represented Quebec West in the House of Commons from 1908 to 1911. Among his other activities may be mentioned the fact that he is chairman of the Quebec Harbor Board and that he represented the Minister of Militia as local officer in charge of the Valcartier Camp arrangements which he was largely instrumental in completing in record time. He has been associated with the Militia for many years and raised two companies during the Boer war.

Sir. Wm. Price's work in connection with the Valcartier camp was of the greatest practical assistance and had much to do with the successful raising of the force of 30,000 Canadian soldiers now in camp at Salisbury Plains. Sir Wm. Price's prominence in military circles commenced in 1887 when he was appointed a lieutenant of the 8th Royal Rifles. Subsequently he was gazetted captain. His recognition among the prominent Canadians included in the New Year's honor list will be admitted by his friends in the lumber trade to be an honor justly deserved.

Sir Herbert S. Holt, of Montreal, one of the New Year's Knights, is a director of Price Bros., Limited.

A report from Truro, N. S., states that a boom of logs valued at $15.000 was lost in December as the result of the great storm. The boom was on the Meander River and when it broke the logs were carried into the St. Croix and Avon Rivers and subsequently scattered on the waters of the Minas Basin.

A prominent Montreal wholesale lumber dealer and manufacturer, in a recent report to the Canada Lumberman states that manufacturers of lumber in Eastern Canada are all looking for a good year during 1915, on account of the changed conditions in the demand for Eastern spruce, resulting from the war. He reports also that in discussing prices with manufacturers, practically everyone of them is holding out for a considerable advance.

# One of B. C.'s Busy Shingle Plants

## Port Moody Shingle Company Turning Out Forty Million Pieces Annually and Enjoying a Widespread Demand

The Coast district of British Columbia has a goodly list of shingle mills, with more in prospect. All of them manufacture an excellent article, but undoubtedly in some cases this is due more to the quality of the raw material than to any particular care taken in turning out the product itself. In too many of the smalelr mills the aim appears to be quantity rather than quality, the result being that the shingles turned out are lacking somewhat in the finer points of milling, grading and packing.

This cannot be said of the output of the Port Moody Shingle Company, Limited, one of the industries of the city of Port Moody, at the eastern end of Vancouver's fine harbor—Burrard Inlet. The plant was erected about eight years on the waterfront by J. H. McLean, who, previous to that had operated for about a year a small shingle mill at Cedar Cove, Vancouver, where he demonstrated his ability to manufacture a high-class article and created a demand which followed him to his new location. Three years ago the entire plant was destroyed by fire, but the next day President McLean started a gang of men clearing away the debris, and within a month a larger and better mill was erected and operating with a full force of men.

### Output of Forty Million Shingles

Five machines are installed, the daily cut averaging between 135,000 and 150,000 shingles for the ten-hour run or a yearly total of about 40,000,000 shingles. The Port Moody Shingle Company has a great advantage over many of the Coast mills as it owns and operates its own cedar limits, instead of buying logs or bolts of ordinary quality at the prevailing market price. The firm's limits are located at Capilano and on the North Arm of Burrard Inlet, and furnish a high grade of timber, which is cut into bolts on the ground and towed by steamer to the mill in rafts containing about 100 cords each. Then the bolts are cut by heavy circular saws into blocks of the required length, which drop into conveyors and pass on to the machines in endless procession. From the machines the shingles drop down chutes to the packers, who form them into bundles which are transported on cars to the dry kiln. The period of seasoning depends to some extent on the rush of business and occasionally is modified to suit the wishes of the customer, but the company has found that, when dried for about ten days under moderate heat, the shingles preserve their good qualities much better than when subjected to high temperature for a shorter time in order to make them fit for shipment. The temperature of the Port Moody Shingle Company's kilns is never permitted to exceed 180 degrees.

The motive power to operate the machinery of the plant is supplied by an engine of 80 h.p. capacity, which receives steam from a boiler fitted with Dutch over feed, the fuel used being the sawdust and refuse from the machines. A small engine is also installed to operate the electric light plant. The filing room is in charge of a skilled filer who has every mechanical appliance necessary for keeping the saws in good order.

J. H. McLean, the proprietor and sole owner of the Port Moody Shingle Company, is admitted one of the most experienced shingle manufacturers in the province of British Columbia. He enjoys the esteem of everyone including the fifty or more employees at the plant. Coming to British Columbia some fourteen years ago, Mr. McLean has been engaged in the shingle trade practically all his ilfe. Beginning when but twelve years of age, he worked in a shingle mill in Eastern Canada during his school vacations, receiving the munificent remuneration of 20c per day for his labor. By the time he was sixteen he was operating a saw, and from that day to this he has been actively connected with the shingle trade. Knowing the business from top to bottom, he is competent to supervise any part of the operations.

There is a market for twice the present output of the Port Moody Shingle Company. At the present time much of this output is shipped to New England, the Boston market being the destination of a large part. Large shipments are also sent to Ontario and the Northwest markets.

---

## Five Per Cent Freight Advance Granted in United States

By a supplemental report in the eastern rate advance case, the Interstate Commerce Commission of the United States, has granted further increases in rail rates in official classification territory, which, except for limitations as to the commodities on which it is allowed in its order of July 29, advances practically on the basis of the five per cent. originally asked for by the carriers. The advance now allowed applies not only in Central Freight Association territory to which the advances were limited by the former order, and in which they are now increased from three to five per cent. above the old rates, but also in trunk line territory (that part of the official classification territory east of the Buffalo-Pittsburg line) where an increase of five per cent. is granted.

The petition for rehearing in the case was filed September 15 on behalf of 112 roads affected and was based on conditions developed since the original hearing, including later statistics of operating results and the financial difficulties growing out of the war in Europe. These influences received recognition.

---

## May Seek Increase of Canadian Freight Rates

Whether any Canadian railroads will seek to raise their freight rates, as a result of the recent decision of the Interstate Commerce Commission of the United States to permit Eastern roads to make an increase of 5 per cent., has not yet been announced. That they are giving the matter attention and considering the wisdom of such a course is indicated by views upon the subject which have recently appeared in the daily press. The freight movement from Canada to the United States in the East, consists to a very large extent of lumber, pulpwood, newsprint paper, wood pulp, similar raw materials and, in some years, hay and live stock. The impression is that the railways will seek to raise these rates by 5 per cent. about the middle of February. When the Canadian railways wish to increase their freight rates they may do so, but they must give 30 days notice to the Dominion Board of Railway Commissioners. During that time, if complaint is made by any shippers, the Board will enquire into the justice or injustice of the increase.

**Plant of the Port Moody Shingle Company, Limited, Port Moody, B. C.**

# Report on Canadian Pit Prop Supplies

## Commissioners Present Their Findings—Encouraging Statements Regarding the Possibility of Opening Up an Extensive Trade With Eastern Provinces

The reports to the Board of Trade of Great Britain upon the supply of pit prop timber, presented by the Commissioners who were recently appointed to enquire into this subject and who made a visit to Canada and Newfoundland in connection therewith has been received by the Canadian Commissioner of Commerce. It contains much material of interest to those who are in a position to furnish such timbers. The general report opens with the following table showing the sources from which pitwood was obtained during 1913:—

| Country | Quantity Loads | Value £ |
|---|---|---|
| Russia | 1,538,714 | 2,415,086 |
| Sweden | 359,988 | 558,095 |
| Norway | 114,777 | 200.932 |
| Germany | 28,926 | 53,550 |
| France | 984,331 | 839,065 |
| Portugal | 315,538 | 278,154 |
| Spain | 103,123 | 90,972 |
| Other foreign countries | 5,931 | 9,212 |
| Total | 3,451,328 | 4,445,066 |

In addition to this it is estimated that 700,000 or 800,000 tons of home timber were utilized, making a total annual cansumption of about 4½ million tons.

The results of this enquiry showed that on the 1st September there were approximately 1,000,000 tons of pit timber in the United Kingdom. Apart, therefore, from the imports which might normally be expected to come into the country, and the home supply which was likely to be forthcoming, there appeared to be a stock actually available which would be sufficient to last at least to the end of the year on the basis of the normal consumption of the mines.

This information, while tending to show that there was no cause for immediate anxiety made it evidently desirable to take steps to encourage additional supplies to meet future requirements.

### Great Britain's Pit Prop Requirements

The imports of props from all sources up to the end of November, since the outbreak of war and comparisons with previous pears, were as follows:—

| Month | 1,000 Loads 1912 | 1913 | 1914 | Percentage of 1914 on the average of 1912 and 1913 |
|---|---|---|---|---|
| August | 426 | 422 | 184 | 43.4 |
| September | 338 | 479 | 193 | 47.2 |
| October | 341 | 421 | 239 | 62.7 |
| November | 222 | 216 | 184 | 84.0 |

It will be seen from the figures that the percentage of imports for 1914 on those of 1912-13 has risen from 43.4 in August to 84 in November. The total imports since the 1st of September, together with the amount of home timber estimated to have been put into the market, are roughly equivalent to the consumption of the mines during the same period, and consequently the stock in the country would appear not to have appreciably diminished.

The general effect of reports received in Canada and Newfoundland shows "that plentiful supplies of suitable timber are available in these countries and could be placed upon the market in Great Britain at a price which, having regard to present conditions, would probably not be regarded as unreasonable."

### Newfoundland a Promising Source of Supply

A detailed report upon the subject contains the following:—

(1) Newfoundland.—Very large areas of suitable timber exist in the island, a considerable proportion being close to the seashore or to the many bays and rivers, and therefore easily transported to the various points where it can be loaded on to steamers. The nature of the coast is such as to provide innumerable inlets where steamers can safely load, although, with the exception of the southern coast, shipping is only practicable from mid-April to mid-December.

The Reid Newfoundland Company's Railway traverses some 500 miles of the country, and passes through a large number of suitable timber areas, thus affording a means of conveying the timber to shipping points.

The suitable timber consists of fir and spruce, the former being a more quickly grown timber than the latter.

Small quantities of pit timber have already been shipped from Newfoundland to England at intervals during the past few years, but no successful establishment of the business has been accomplished. The industry is one which would be new to the inhabitants, and would require organization by those who thoroughly understand it. Labour is available during the winter months, which is the period during which the timber would be cut and transported to shipping points.

Within three miles of the shore over the whole island the timber rights have been reserved by the Government. Ordinarily anyone may cut timber on this three-mile limit for firewood, housebuilding, boat making, and other purposes, but not for export, except in the form of pulp.

By a special Act passed since the outbreak of the war the Government have sanctioned the export of timber free of tax until December, 1915, and possibly this concession might be extended if a pit timber industry is established.

Newfoundland therefore affords a suitable field of operations.

### Large Areas in Nova Scotia

(2) Cape Breton and Nova Scotia.—Here, as in Newfoundland, large areas of suitable timber, fir and spruce, exist within easy reach of various shipping ports, most of them open nine months during the year. It is from this area that immediate supplies are available, although it is impossible at the moment to say accurately the amount of such supplies.

The following average prices have been quoted to us:—

For timber 3-in. to 7-in. top diameter, 5 ft. to 9 ft. lengths: 1 1-5c (3-5d.) per lineal foot alongside steamer.

For timber 8-in. top diameter and upwards, 9 ft. to 20 ft. lengths: 5½c (2¾d.) per lineal foot alongside steamer.

For future demands large supplies can be obtained from this area. The timber in most cases is owned by small holders from whom it would have to be collected. Many of these small holders occupy themselves during the winter cutting timber, and as there are no markets for pulp, it is easier to obtain the timber for colliery purposes.

We consider that Nova Scotia and Cape Breton offer a promising field, both for the present and future supplies. The timber from appearances compares favorably with that hitherto used in British collieries, and the cutting of timber has been carried on for many years for the local collieries.

(3) New Brunswick and Quebec.—We have had a number of interviews with timber owners, and there can be no doubt of the fact that immense areas of suitable timber, fir and spruce, exist.

The lumber and pulp markets of Quebec and the United States afford at present a ready market for the timber which is being produced from these forests. One or two odd parcels of timber can be obtained at once, and for these we have quotations. We also have offers of large quantities for next Spring, provided the necessary camping arrangements can be made forthwith.

(4) Anticosti.—The Island is privately owned, and therefore any kind or quantity of timber can be cut without restrictions. We understand that large quantities of suitable timber for collieries are available during the Spring and Summer shipping season, but the prices quoted us are higher than those from other areas.

Special Note.—Barking: It has never been the custom to bark the timbers in the forests. The only barking which is done is effected by machinery at the pulp mills. The timber used in the Canadian collieries has the bark on. For a time, at any rate, it would appear that there would be difficulty in getting the bark removed, but if the industry became established no doubt the difficulty attending barking would be overcome.

### Mr. Windham's Conclusions

An additional report by Mr. W. Windham, Board of Trade representative upon the Commission contains the following:—My conclusions are:—

(a) That there is an almost inexhaustible quantity of timber in large areas of Newfoundland and the Maritime Provinces of Eastern Canada.

(b) That, if arrangements can be entered into immediately, a limited supply is now available for shipment, and that large quantities can be secured for shipment in the spring of next year.

(c) That the quality of the required species of timber is suitable for mining operations.

(d) That the real determining factor as to procurable quantities resolves itself simply into the question of cost.

(e) That for props 3 to 7 inches top diameter and 5 to 9 feet in length the following prices are quoted:—

Newfoundland 49s. 2d. per fathom f.o.b.

Cape Breton 44s. 0d. per fathom alongside steamer.

Nova Scotia 44s. 0d. per fathom alongside steamer.

(f) That the Atlantic freight charges are about double those of

the Baltic, being approximately 50s. per piled fathom, as compared with 25s. under normal conditions.

(g) That ample labor is obtainable to cope with requirements during the winter in Newfoundland, and throughout the year in the Eastern Provinces of Canada.

In a memorandum attached to the report Mr. Windham says:—

The capacity of Newfoundland is apparently equal to an annual output of 300,000 cords of pit props.

The shortage from the Baltic occasioned by the war is represented to be about 676,000 cords per annum.

Newfoundland could thus meet nearly half that shortage. The estimate of 300,000 cords is given on a conservative basis, because of the fact that a wide margin of error must necessarily be allowed for in making calculations in connection with an industry which is only in its inception.

### Prices Compared With Those of the Baltic

Referring to prices Mr. Windham's memorandum says:—

Approximately 37,500 cords (which is equal to about 20,000 fathoms) can be supplied according to specification, at $6.00 to $8.00 a cord from ports in Bonavista Bay, and at $10.00 a cord from St. Johns, or ports in Placentia Bay.

As compared with the Baltic prices of 44s. per fathom, this works out at an average rate of 49s. 2d. at Bonavista Bay, and 70s. 3d. at Placentia Bay. These are f.o.b. prices in each case. The freight from the Baltic ports in normal conditions is about 25s., in comparison with 50s. from Newfoundland ports; that is to say about 50 per cent. lower.

The c.i.f. prices in the United Kingdom thus compare as follows:—

| | Per fathom | Excess |
|---|---|---|
| Baltic timber ... ... ... ... ... | 71s. 0d. | ..... |
| Newfoundland timber— | | |
| (a) Bonavista Bay ... ... ... .. | 99s. 2d. | 30s. 2d. |
| (b) Placentia Bay ... ... ... | 120s. 3d. | 51s. 3d. |

Such a wide difference may be partially discounted, however, by the fact that the Newfoundland prices are admittedly calculated on a high scale.

The question of freight has a very important bearing upon the economic side of the question Mr. Windham reports:—It appears that there is no definite freight for pit props which are not at present exported across the Atlantic. As far as can be ascertained it will be necessary to base an estimate upon the lumber freight, which is normally 40s. per Petrograd standard of 165 cubic feet (1,980 feet board measure). This has recently risen to 50s. It is estimated that the freight for pit props will be about 25 per cent. in excess of that for deals, and that consequently if the existing rate for the latter remains at 50s. per standard, the pit prpp freight may be calculated at 62s., as compared with 35s. per standard from the Baltic.

Referring to freights from Nova Scotia and Cape Breton, Mr. Windham reports as follows:—

Taking the freight charges at 60s. the total cost per fathom is estimated at 124s. 6d. as compared with 71s. from the Baltic ports.

During the period of the war Nova Scotia can be looked upon as a favorable source of supply, and it is perhaps possible that the Province may retain a portion of the pit prop trade on a permanent basis.

In regard to New Brunswick Mr. Windham says:—

This Province contains a vast amount of timber, but it appears that the industries already established draw upon its resources very largely in connection with the lumber and pulp trades. Only the small trees and tops of larger trees might be available for mining operations, but it is doubtful whether their supply for that purpose could be undertaken on a remunerative basis.

Referring to Quebec Mr. Windham reports as follows:—

The northern shores of the St. Lawrence are reported to be heavily timbered, and the prospect of obtaining large quantities of pit wood from these sources—especially in the region of Saguenay River—appear to invite investigation. Unfortunately, the time at our disposal did not admit of a visit to this promising area of supply.

The approximate quantities and average prices of available supplies in Newfoundland and Canada are summed up in the following table presented in the report:—

| Source of Supply | Approximate number of cords 1914 | 1915 | Average price alongside steamer Per cord $ | English coinage s. d. |
|---|---|---|---|---|
| Newfoundland .... .... | 37,500 | 37,500 | 7 | 29 2 |
| Cape Breton ... ... ... | 5,350 | 5,350 | 6.30 | 26 3 |
| Nova Scotia ... ... ... | 6,000 | 50,000 | 7 | 29 2 |
| Quebec ... ... ... ... | 9,000 | 124,000 | 7 | 29 2 |
| Anticosti ... ... ... ... | 8,000 | 170,000 | 7.50 | 31 3 |
| British Columbia ... .. | Large quantities .. | | 3.15 | 13 1 |

Vancouver and New Westminster firms recently secured orders from the Great Northern Railway for sixty carloads of bridge timber and car lumber. It is stated that this order is the forerunner of a number of others.

## Quebec Lumberman at the Front

Pte. J. Power, Quebec, P.Q.
Now at Salisbury Plains.

The lumber industry is well represented among the men who have gone to the front to fight for the allies. Among the Canadian lumbermen who have enlisted is Mr. J. Power, Quebec, P.Q., whose portrait is published herewith. Mr. Power is a son of Mr. Wm. Power of W. & J. Sharples Reg'd., Quebec, P.Q., and a brother of Mr. W. Gerard Power of the River Ouelle Pulp & Lumber Company, St. Pacome, P.Q. For the last few years he was in the employ of W. & J. Sharples Reg'd. and previous to that was with the River Ouelle Pulp & Lumber Company. Mr. Power was so keen to enlist, that, although he was an officer in the Queen's Own Canadian Hussars, he went as a private in the Infantry, as very few mounted men were taken with the first contingent. Mr. Power has been with the first contingent at Valcartier and Salisbury Plains.

## English Conditions Are Encouraging

Mr. Willian T. Mason, of the firm of Mason, Gordon and Company, Montreal, recently returned from a five weeks' business visit to England and Scotland. Mr. Mason, who visited many of the principal ports, saw a large number of lumber firms, and in an interview with a representative of the Canada Lumberman gave his impressions of the general business outlook, particularly as it affects Canadian lumber exports to Great Britain. He stated that he found an absence of any great excitement over the war. Employment is good, and the people are optimistic, and look for a speedy termination of hostilities, some being of opinion that this will occur in May or June.

Stocks of lumber are said to be fairly plentiful, and, in the opinion of those in the trade, are likely to be sufficient until the termination of the war, provided the above guess as to the duration of the war is correct. The enormous advance in freights is likely to handicap any material expansion of exports from this side. Firms do not seem to be willing to pay these high charges, especially in view of the ample supplies of lumber on hand. There is a decided division of opinion as to the course of freights. Good judges think that there should be a reduction in charges in the spring, while others of equal standing believe that there is little chance of any relief in this direction, in fact look for a continued increase.

Mr. Mason investigated the pit prop situation, and was successful in selling a moderate amount of lumber suitable for pit props. He is strongly of opinion that any trade with Canada in this description of lumber will be only temporary, as it is probable that after the war, when the Baltic is re-opened, the business will revert to its original course. This belief is founded on the low price of Baltic pit props and the cheap freights. Canadian lumber cannot be supplied at the same rates as that of the Baltic, and our freights are also considerably higher. In addition we are handicapped by the small amount of cargo from Great Britain to this side, whereas there are ample inward and outward freights to the Baltic, which naturally tends to keep down rates.

Asked his views as to probable new markets for Canadian lumber, Mr. Mason said that there is an opening for wood suitable for matches, also for railway ties and crossing plank, but, this is qualified by the statement that much depends upon the freight rates, to which Mr. Mason attaches considerable importance.

Mr. J. E. A. Dubuc has been appointed manager of the St. Lawrence Pulp and Lumber Corporation, Limited, Chandler, P.Q. Mr. Dubuc is also managing director and secertary of the Chicoutimi Pulp Company, Saguenay, P.Q. The St. Lawrence Corporation have decided to use the rivers more freely for the purpose of driving their logs.

The many friends of Mr. William T. Mason, of Mason, Gordon and Company, Montreal, will sympathize with him on the sudden death of his wife, at 120 Arlington Avenue, Westmount. Mrs. Mason died from heart trouble only a few days after the arrival of Mr. Mason from England on a business trip. She way very active in philanthropic work, and took a special interest in the Soldiers' Wives League. Besides her husband, Mrs. Mason leaves three daughters and one son, namely, Mrs. James L. Ford, Vancouver; Miss Lorna and Miss Kathleen, at home; and Mr. E. Percy Mason, of Ottawa.

# The Future of the Lumbering Industry

## A Remarkable Analysis of the Critical Pass Which the Trade Has Reached in the West—With Practical Remedies Suggested

By H. R. MacMillan*

The present depression in the lumber industry respects no boundary lines, whether interstate or international. In British Columbia, to the same extent as in the Northwestern States, the prosperity and development of the community awaits upon the return of conditions which will allow of the profitable operation of timber industries.

The present situation is due chiefly to ignorance of the true value of the industry to the community, ignorance of the disabilities under which lumber manufacturers operate, together, perhaps, with some failure on the part of lumbermen to meet competitors in improvement of manufacturing and selling methods. If out of this lean year there develop the remedies which an analysis of the situation must suggest both to the public and the lumbermen, even this year will earn a place amongst the most profitable.

The paramount position of the forest industries here in the Northwest cannot be stated too often nor in too striking terms. In our commercial fabric it is the warp around which other industries are woven. The production of lumber is the pioneer occupation which opens up the new districts, brings employment, transportation, clears the land, furnishes markets for the settler and brings into the country the wealth upon which other industries are supported.

H. R. MacMillan, Chief Forester for British Columbia.

Measured in terms of annual production of wealth the lumber industry, both in British Columbia and in the Northwestern States, ranks high above its nearest competitors, agriculture, mining and fisheries. In British Columbia of every dollar in the pocket of the wage earner, merchant and financier, 33 cents is from the forest. In Washington, Oregon and Idaho, the lumbermen are still more productive; 42 per cent. of the public wealth of Washington, 45 per cent. of the public wealth of Oregon, and 31 per cent. of the public wealth of Idaho, is derived directly from the logging camps, sawmills and other forest occupations.

We in the Pacific Northwest pride ourselves justly on the beauty and size of our cities, upon our growth in population, upon the magnitude and stability of our financial institutions, factories and supply houses, and upon our transportation facilities. These institutions are the conspicuous organs of our commercial body. The lumber industry is the heart of that organization, constantly pumping through it the nourishing financial blood without which it could never have grown, and without which it could not maintain even its present size.

### The Lumberman's Dollar

It is unnecessary to state here that the wealth brought into the country by the lumber industry does not remain in the hands of the lumbermen. The lumbermen's dollar is one of the world's best travellers; of every dollar 40 cents goes to transportation companies, 35 cents to labor directly employed in the industry, 15 cents to merchants for equipment and supplies, 10 cents for interest on capital invested. This analysis of the lumbermen's dollar discloses the source of our prosperity.

The lumbermen of this forest region pay directly each year to transportation companies $80,000,000, to wage-earners $70,000,000, to merchants $30,000,000, and for the use of borrowed working capital, $20,000,000. This money is later circulated into every portion of the country and forms an important factor in the livelihood of those few people who do not come into direct contact with the lumber industry.

I have outlined the importance of the lumber industry at some length for a definite reason. You will have noticed that in the distribution of the wealth produced on this industry, which I gave a moment ago, there was no sum assigned to the lumbermen for profits. This is true at the present time. There are losses but no profits. It is a point to be kept in mind when discussing this great industry. It is an industry which is of far greater importance to wage-earners, merchants, communities, counties and states or provinces, than it is to the few men who happen to be charged at present with the control of the timberlands, logging camps and saw mills.

The manufacture of lumber at the present time is the one great industry of North America which is operating at a serious loss. The situation can be stated in a few words. It costs on the average $15 per thousand to produce lumber. This lumber is now being sold at $10 to $12 per thousand. This loss of $2 to $3 on each thousand feet manufactured is in the aggregate a terrific draft on the resources of the Northwest. Its effect on the community may be illustrated by a survey of what has happened in one region which may be taken as typical of the lumber manufacturing districts of British Columbia, Washington and Idaho. In this district three billion dollars were invested in timber holdings, logging plants and sawmills. The annual output made possible by the investment was three billion feet. These plants if running on full time would employ 42,000 men and distribute $29,000,000 in wages, $16,000,000 in transportation, $6,000,000 in supplies, and $18,000,000 as a return on capital invested. It has been impossible for this district to continue selling lumber for less than the cost of production; over two-thirds of the mills are shut down, the number of men employed has dropped to about 5,000, the annual expenditure on pay roll, supplies and transportation, has shrunk by $42,000,000, and practically no payments can be made on borrowed capital. The laborer is without a job, the farmer is without a market, the business man is without a customer, and the property owner is facing a shrinkage of capital.

### Value to the Public

The whole public suffers with the lumber industry. It is a public necessity that the industry be put on a more profitable basis. It is rather surprising to find upon analysis that some of the disabilities under which the lumber industry labors can be removed by public action in the public interest. The only inference can be that the public is not sufficiently informed concerning the production and marketing of lumber. The low price of forest products is brought about by the existence of a manufacturing capacity far in excess of the market demands, by competition between lumber and substitutes, by high transportation charges, and by an imperfect selling organization.

There is a sawmill capacity in the Pacific Northwest capable of manufacturing fifteen billion feet of lumber annually. The annual market demands never exceed ten billion feet. One-third of the sawmills must stand idle all the time. Lumber prices are kept low by the bitter fight maintained by mill owners endeavoring to keep their mills in the operating column.

The public may ask—"Why are so many sawmills built?" The answer is to be found in the cost of carrying timber. There are 890 billion feet of standing timber in private ownership in Oregon, Washington, Idaho and British Columbia. The 470 billion feet of publicly-owned timber is also coming gradually into the market. The private owner must, therefore, even after allowing for a greatly increased consumption of lumber, look forward to the possibility of carrying his timber for fifty years.

Great quantities of timber were purchased at $1 per thousand. To repay interest at six per cent. on the investment, with no allowance for profits, this timber must double in value every ten years. During the past five years the annual tax rate has increased rapidly, some owners having found it to treble in this period. Investments in standing timber produce no annual income. Taxes and fire protection require a continual increasing annual investment of fresh capital. Many timber investors in British Columbia, and probably the same is true in the Northwestern States, invested too large a proportion of their capital in timber and are embarrassed by the lack of income or the necessity of finding fresh capital to meet carrying charges. These conditions, the certainty of interest charges, the uncertainty of increasing tax rates, the necessity of turning timber into cash even at a loss, have decided many owners to build mills even when they know that the mills cannot be expected to return more than a portion of what they have invested in cash in the stumpage.

The only advantage which the manufacturer in British Columbia possesses over his competitor in the United States is found in the lower carrying costs. As you know, nearly the whole 150 billion feet of timber alienated by the government has been merely licensed or lesseed upon terms which provide that the lessee pays about one to three cents per thousand per year while holding the timber, and pays a royalty of 50 cents per thousand when the timber is cut. The timber may be held in perpetuity on these terms, provision existing for increasing the royalty when lumber values increase. Timber thus

* Address delivered by H. R. MacMillan, Chief Forester for British Columbia, at a recent convention of the Western Forestry and Conservation Association.

held is not subject to taxation. One of the greatest disabilities of the lumbering manufacturing business is the necessity of tying up money in a stock of timber sufficient to supply a mill twenty or thirty years. British Columbia's method of handling timber avoids this, and makes it possible for lumbermen to start on smaller capital.

### Stumpage Values

In considering this question of stumpage values we must remove from our minds any tendency to be influenced by the story of the two great stumpage movements which have already taken place in the continent, that of the Eastern and Southern timbers, and that which took place when the timber acquired for nearly nothing on the Pacific Coast was sold to its present holders for 50 cents to $1 or $2 per thousand.

You will pardon me if I point out the dissimilarity between conditions in the lumber business in the east 30 years ago and on the Pacific Coast now. The Eastern lumberman paid his labor $20 per month and board; a freight rate of $3 delivered his product to a market of thirty million people. It was an era of rapid agricultural and manufacturing development; there were no cement, metal, asbestos and clay substitutes in the hands of clever engineers and salesmen; the architects and engineers were more accustomed to dealing in wood than in other materials and specified wood. There were no other regions from which wood could be brought cheaply. All buildings were of wood. The Eastern lumberman supplied all the wood, produced by cheap labor, shipped on a low freight rate to a market free from competitors. He was even spared the competition of other lumbermen, it was never difficult to get capital, the number of mills was not in excess of the market requirements. People back East are still talking of the money the lumbermen made.

Contrast with the white pine man of the last century the Douglas fir producer of this century. Labor is three times as high, freight rates are three times as high, the keen, skilful competition of cement, steel and clay products is at its height, our fir lumber meets in every market of the world the product of other forest regions, and must meet them in price. Consider if the public attitude toward the lumber industry is not even now and here, in this of all regions, based upon the financial success of the Eastern lumberman in the last century rather than the condition of the Western manufacturer in this country.

The great rise in Eastern stumpage was brought about by the accessibility of this timber on a $3 freight haul to a great lumber consuming population of 60,000,000 people. The Pacific Coast, with its more costly milling and logging conditions and its $8 to $12 freight haul, presents no such hopes.

We are face to face on the Pacific Coast with a new stumpage problem. As timber becomes scarcer lumber prices and stumpage prices should increase. So argued the lumbermen who had seen it happen in other districts. These lumbermen did not foresee that competition between many manufacturers would keep the lumber prices down. They did not take sufficiently into account two other very important factors—transportation costs and substitutes.

Of the ten billion feet of lumber cut annually here only thirty per cent. is used domestically. The only markets for the remainder are transcontinental and overseas. Overseas the freight amounts to $8 to $20 per thousand; transcontinental to the Prairies or the Atlantic seaboard it is $8 to $14 per thousand. This rate makes the Pacific Coast product a luxury in all its important natural markets. This high freight rate is a new condition which Pacific Coast lumbermen are the first in the world to face. It is a protective barrier which enables the owners of timber in the East and South to secure high stumpage returns. There is but little hope of getting freight rates reduced, therefore we must concentrate our energies elsewhere and prepare to hang on until Eastern timber is approaching exhaustion, when lumber prices in our chief markets may be expected to increase.

We shall then, as now, have to fight the lumber substitute. Substitutes have undoubtedly decreased the consumption of lumber for building operations. Only twenty years ago 95 per cent. of car building materials were made from forest products; now the forest supplies only 65 per cent. Substitutes have gained alarmingly on the lumbermen in the past decade. Commercial reviews show that there was an increase in building operations in North America during the years 1909 to 1912, yet the consumption of lumber per capita decreased one-seventh in this period. No such decrease has ever been suffered by the promoters of the substitutes; while lumber use has been going down, substitute exploitation has been going up. From 1899 to 1912 the consumption of cement increased 240 per cent. From 1909 to 1912, while lumber decreased fifteen per cent., cement consumption increased thirty per cent. The use of other substitute products increased in like degree; steel bars for reinforcing increased 72 per cent. from 1909 to 1912; substitute roofings and sheetings increased 200 per cent. from 1899 to 1909.

### Important Factors

The most important factors in the increasing use of substitutes for timber are advertising, education and salesmanship. The substitute, be it tin shingle, metal siding or cement, is advertised constantly before the eyes of everyone. It is specified by architects and engineers who are educated to its qualities, but who have received no education in the qualities and use of woods. It is sold by clever selling campaigns aimed directly at and reaching the consumer. Proprietors of substitutes for lumber sell their product. The lumber manufacturer waits for someone to buy his.

The public is now responding to the well-planned and aggressive educational campaign upon which the proprietors of wood substitutes have expended $3,000,000 per year. If ever you lumbermen will give a moment's thought you will recall that you have been educated to cement foundations, cement sidewalks and roadways, rubber or metal roofing, metal interior trim, metal furniture. You will admit that the substitute people have reached out, seized upon your distributing agent—the retail lumberman—and have within five years, under your very noses, in very many cases, made of him a more aggressive distributing agent for substitute products than he ever was for lumber. Nearly a third of the retail lumberman's sales are now in lumber substitutes.

You must admit that the manufacturer of substitutes has judged the problem aright. He has not been afraid to employ high-priced engineers to study the possibilities of the market, to produce the product that would sell to the best advantage, or to employ high-priced salesmen who have organized, as you must admit, selling organizations which hypnotize the purchaser and produce in him the desire for somebody's roofing or so-and-so's shingles, and which at the same time, by pointing the road to profit, inspire the retailer with an energy and ambition for handling these products. This successful campaign is financed on $3,000,000 a year for the continent—only a fraction of the sum the lumber industry of the Northwest has lost in 1914.

The present situation in the industry cannot continue. Improvements must be brought about, both by the public and by the lumbermen themselves. The attention of the public is already directed toward the putting of timber taxation on a fairer basis. As an element in the cost of carrying timber, taxation is less than interest charges, where timber has been purchased at 50 cents per thousand or more. Yet taxation requiring new investment of capital each year, and increasing in rate each year, is a decided factor in encouraging the rapid cutting of timber. The adoption of some new form of yield tax will safeguard the community in the revenue and encourage the conservation of timber resources.

A more important feature which the public will sooner or later consider in its relation with the timber industry is price regulation. The communities of the Pacific Coast in selling the lumber below the cost of production are paying a direct and unnecessary bonus to the communities of the prairie, the Atlantic seaboard, or even to foreign countries. The effects of this bonus, of selling lumber cost, are felt in every community of the Pacific Coast. The remedy lies in allowing lumber manufacturers to maintain a profitable price for lumber in the same manner as a profitable price is maintained by dealers in other necessities. The public may at any time, by an investigation of the lumber industry, decide upon a maximum price which lumber may reach, and which returns simply interest on the money invested and a low profit. It may even be expected, as the realization becomes more general, that timber is a public resource, that the production of timber is a public necessity, that the public may decide upon a price below which lumber may not be sold. Every argument that supports the government regulation of railroad rates applies with equal force to a similar regulation of lumber prices. It is certain that with public regulation of lumber prices the public would not suffer as it suffers now through unrestricted competition.

A change of policy on the part of the lumbermen, which is now on the way, may be expected to improve the situation. The manufacture of forest products must now be conducted on a closer margin than formerly. The market has moved away from the mill, the mill has moved away from the timber, substitutes of lumber are in general use, business must therefore be done on a smaller profit than formerly, and logging, manufacturing and selling must be managed on a closer margin. The cost of logging and manufacturing is certain to be reduced by scientific methods. Similarly the quality and quantity of the product produced from the log will be increased.

### Maintenance of Price

Upon the maintenance of a profitable lumber price depends much of what the lumberman may do for himself to better conditions. The manufacturers of flour, cement, steel and food staples, found it impossible to reach the highest development in their respective industries while those industries were unorganized. Similarly the lumberman, acting as an individual, in an unorganized industry, selling a product for less than the cost of production, finds it impossible to carry out in his industry those reforms which he knows the industry demands. The progressive timber owners and lumber operators know what the industry needs. They know that methods of logging and manufacturing must be rendered more efficient, less wasteful of energy, material and timber. They know that this can be done only through training and employing a more highly specialized class of logging and manufacturing engineers. This part of the program for a successful future

is even now being slowly accomplished. Progress would be speeded up if the industry were in such healthy condition as to attract and reward the best type of technical men as logging and manufacturing specialists. Representative lumbermen through the Northwest realize that the same methods must be adopted to market lumber that have been proven successful in the marketing of tobacco, cement or farm implements. Every citizen must be taught the qualities and uses of lumber, and just as the tobacco people endeavor to teach the boy to chew, the lumbermen must unite to teach the boy to handle tools, build, be his own carpenter. Technical schools, engineering schools, must no longer be permitted to specialize in teaching to budding engineers and architects the qualities of steel and cement, to the total neglect of timber. The best salesmen, the most successful organizers of selling campaigns, in the whole of America must be attracted to the lumber industry to devise and carry out means of arousing in the consumer an admiration for the many qualities of timber, to make it more easily possible for any citizen to buy the timber he needs, to inject into the retail lumbermen a greater capacity to work the market that lies before his door. Someone may say "this is too ambitious a program"—I say "no program is too ambitious for the greatest industry in the Northwest."

The success of this program depends upon being able to devote to constructive salesmanship the energy which, in the lumber industry is now devoted to price-cutting competition—destructive salesmanship. The lumberman's competitors would not be able to carry on this successful selling organization if they were not allowed to fix their prices at a profitable level and devote a proportion of their receipts to market extension. Lumbermen cannot maintain their industry in successful competition if they are not permitted to adopt the methods of their competitors.

The increasing of the lumber price would not decrease the market for lumber. This would be particularly true if the increase were accompanied by the formation of an influential and aggressive lumber market extension organization. A canvass recently made of certain farming districts in the prairie showed that over large areas 85 per cent. of the farmers were without any implement sheds. It is not the price of lumber which is keeping them from getting implement sheds; they would quickly save the cost in reducing the depreciation on implements. These farmers have no implement sheds because the lumber industry has not yet a sufficiently aggressive system of marketing lumber.

To repeat, the main problems to be worked out are the maintenance of profitable lumber prices, the reduction of operating and manufacturing costs, the development of such an educational and selling organization as will increase the demand for lumber. These problems are inter-related. The fight between lumber and its substitutes will not be settled on the merits of the contestants until the lumber industry has developed a selling organization equivalent to that maintained by the promoters of the substitutes. Until these problems are solved there is little likelihood of any general and permanent advance in stumpage prices or lumber prices on the Pacific Coast. There is so much timber on the Pacific Coast so far removed from markets that there will hardly be, in the next decade, any fear of a timber famine with resultant rise in stumpage prices. Stumpage prices are more likely, during the coming few years, to be settled by lumber prices. Since lumbermen have shown themselves powerless to fix lumber prices at a profitable level, the best that stumpage owners can hope for is that the regulation of lumber prices may come soon, and that lumber prices will be regulated at a level which will allow them interest and carrying charges on their investments.

In this discussion I have not differentiated between conditions in British Columbia and the Northwestern States. With the exception of the cost of carrying timber, which I pointed out, such little difference as exists is undoubtedly in your favor. I can assure you, on the basis of cost figures collected during the past summer, that, all reports to the contrary, the cost of manufacturing lumber is at present higher in British Columbia than on the average location in the Northwestern States. The causes are those common in a new community—more expensive machinery and higher wages. We are gradually reducing these costs, however, and hope soon to be on an even basis with you.

The problems of this industry cannot be solved by competition between regions or individuals. They can be solved only by co-operation between all persons interested. The prosperity of the entire Pacific Northwest, both north and south of the international boundary line, hangs in the balance; that prosperity cannot be in better care than with the lumbermen of the Western Forestry and Conservation Association.

---

## Canadian Railway Tie Information Wanted in France

A possible market for railway sleepers in France is discussed in a recent report from Hon. Philippe Roy, Canadian Commissioner General, Paris, who has forwarded to the Department of Trade and Commerce, Ottawa, a communication from the Societe Anonyme des Etablissements Carrel Aine, Rouche & Cie, 55 Rue d'Amsterdam, Paris, who state their desire to receive precise information as to the dimensions and prices of ties for a normal road, in British Columbia fir. It is possible that the managing director of this company may, in the course of January, visit Canada, with the object of arranging contracts for sleepers intended for France. Dimensions should as far as possible be as follows:—

| | | Meters. |
|---|---|---|
| Length | (8 feet 6 inches) | 2.60 |
| Width at base | (8 2-3 inches) | 0.22 |
| Thickness | (5½ inches) | 0.14 |
| Width at top | 5 3-10 inches) | 0.16 |

Half-round ties Om.30 wide at the base and Om.15 at the top might also be accepted.

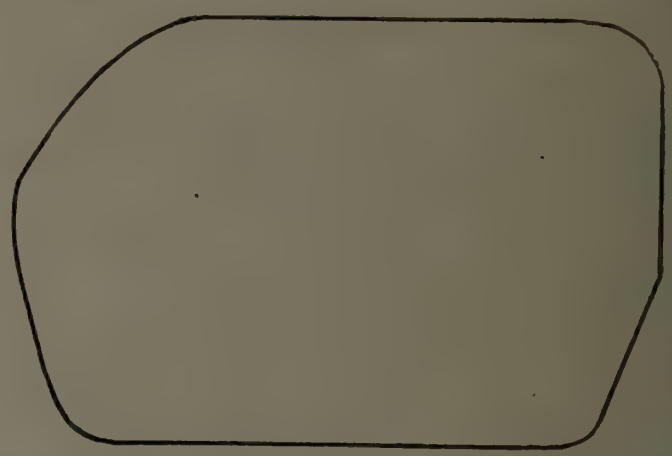
They also desire to receive information as complete as possible as to the resistance to pressure and pull from displacement which may have been compiled from trials to which sleepers of the indicated nature and origin have been submitted, and would gladly receive at a French port, preferably Havre, five or six ties intended to permit them to carry out trials and ascertain the quality of the timber.

The Department is also informed by Mr. W. L. Griffith, secretary to the Canadian High Commissioner, 17 Victoria Street, London, S.W., that Messrs. L. A. Videau et Fils, Bourdeaux, Gironde, France, would be pleased to be put in touch with exporters of British Columbia fir for railway sleepers and freight car construction.

---

## An Important Trade Possibility

An important inquiry having reference to the great demand for railway keys in the United Kingdom has been received from Mr. J. E. Ray, the Canadian Trade Commissioner at Birmingham, Eng., says the weekly report of the Department of Trade and Commeroe. As a glance at the accompanying illustration will show, the keys are cut to



**End view (full size) of sample railway key, 6⅛" long, 3⅜ x 2¼". Bevel edges on one side and rounded edges on the other.**

a special design so as to fit between the steel chair and the rail in accordance with the principle on which permanent ways are constructed in the United Kingdom. The keys, as at present supplied, are made from oak or teak. It is thought however, that a suitable substitute may be found and that Canadian mills may thereby be given an opportunity of supplying part of the quantity required. Mr. Ray has forwarded to the Department several sample keys, some indication as to the required design and size of which may be gained from the accompanying cut:—

It is stated that there is a great shortage of these keys at the present time. Millions are used each year by the British railway companies and the general manager of one of the largest consumers stated that his company were at present prepared to accept over 200,000 keys. Those Canadian firms who may be interested may obtain the name of this company on application to the Department of Trade and Commerce, Ottawa, where the sample keys forwarded by Mr. Ray may also be inspected, and other particulars obtained. (Refer to file No. A 744.)

---

The Canada Lumber Sales Company, Limited, 145 St. James Street, Montreal, P.Q., have sent out a large office type of calendar to their friends in the trade. The calendar contains much useful information regarding the quarters of the moon, etc., and is decorated with a handsome colored picture entitled "The Pacific at Monterey." The picture is a reproduction from a painting by Thos. Moran, one of the most prominent landscape painters of the United States.

---

Joseph Bedard & Sons, Richmond, P.Q., have sent out an attractive calendar for the year 1915, which bears an exceptionally interesting photographic reproduction of a view in the forest. The picture is especially suitable for a lumberman's calendar and will be very acceptable to all of the firm's friends who receive copies.

# Preferential Trade With Australia

## Stimulation of Market for British Columbia Lumber in Antipodes Would Result from Trade Agreement

By E. W. Hamber*

Never has there been a time when the different Dominions of our Empire have felt the need of unity, and a permanent policy of assisting each other, more than the present. To establish a united Empire within which to build up a self-supporting trade within the Empire, the import requirements of one portion to be filled by the export offerings of another portion, to their mutual benefit and to the enrichment of the whole, should be the earnest endeavour of our scattered Dominions.

The idea is not one of party politics, but belongs to much broader lines—a world-wide Imperial preference cementing more surely than anything a united Empire.

I propose only to endeavour to show, in as concise a manner as possible the benefits that would accrue to British Columbia in particular, and to Canadian trade generally, through a preference with Australia in respect to their importations of lumber, and only hope that it will lead others to think and lend their assistance to the furtherance of this important matter. The welfare of this particular industry is, as we all must admit, of great importance to British Columbia. To obtain larger revenues for our province, to keep the lumber mills busy operating full time, to increase the pay rolls, and, by large export trade, to bring vessels to our ports—our merchants thereby securing the trade that each vessel would occasion in the nature of supplies, and many other items—is a matter which should have our immediate and earnest consideration; and, as our provincial government may be almost called joint owners in the standing timber of the province, it is materially in their interests to lend their co-operation.

It is continually remarked and advocated on all sides that lumbermen should extend and seek markets in order to secure a larger field for the output of their lumber. In dealing with the Australian market, few people seem to realize that it is quite unnecessary to find this market, as the market is there, for all and more than the mills of British Columbia are able to supply.

A few facts wil ldemonstrate what the fostering of this particular branch of trade with Australia, and the obtaining from them of a preference, would mean to our province. Australia imported from the Pacific Coast, including the mills on the American side of the line, the large quantity of 238,773,612 feet of Douglas fir; of this amount, the mills in Washington and Oregon supplied 228,673,576 feet—the mills of British Columbia, the ridiculously small proportion of 10,000,036 feet. From the year 1902 to the year 1913, the importations into Australia of Douglas fir increased over 390 per cent. In the year 1902 British Columbia enjoyed 33 per cent. of the trade, and in the year 1913 she enjoyed only 4 per cent. In the year 1913 the coast mills in British Columbia cut 780,000,000 feet—of that amount only 46,000,000 feet were exported to all the foreign countries combined. A glance will suffice to prove what an absurdly small proportion of the available Australian trade the British Columbia Coast mills participated in.

### A Natural Market for B. C. Manufacturers

Is there any reason why two sister Dominions, under the same flag, should not mutually benefit by a preferential arrangement at the expense of outside nations, and without any increased cost to the consumers? It is not a question of, nor a request for free trade, but for a preference only, without any diminution of revenue to the Australian customs or any added expense to the Australian consumer. Canada has a preferential tariff with South Africa namely the preference of a rebate of 10 per cent. on the duty, amounting to approximately 2½ per cent. on the value of the lumber. British Columbia enjoys 64 per cent. of the total lumber trade with South Africa. Think for one moment what it would mean to the people of British Columbia if we enjoyed that percentage of the Australian trade.

Of late there have been many suggestions advanced advocating the extension of trade in lumber with Great Britain and European markets, and it is only right that our exports of lumber should be extended in all directions; but why not first make a strenuous endeavour to expand in what might be classified as our own natural markets? The natural markets of the Pacific Coast lie not in Europe, but in Australia, New Zealand, China and Japan. British Columbia mills can ship to these countries all the year round, and they do not have to extend their energies in finding the market, or exploiting our products, for the market is there to take all we can supply, and more than we can offer. More than that the people of Australia—all things being equal—have a liking for British Columbia lumber, as compared with that purchased from Washington and Oregon, and if our government could obtain from the Australian government a preference on lumber, our mills with their present capacity would be unable to fully supply the Australian demand.

Yet look at the situation of the lumber industry in British Columbia to-day; nearly all the mills closed down, and this increasing demand from our sister Dominion being filled by mills in the United States. Naturally questions would be asked by those who are not conversant with all the intricacies of the trade, why the mills in the United States enjoy so much greater a portion of the trade, and British Columbia only 4 per cent. of it. In this present article it is inexpedient to go into details of the difficulties under which the lumberman of British Columbia operates, but if our government be so minded, it has access to information which would demonstrate conclusively that the Washington and Oregon mills, with the country they have behind them and the more thickly settled and populated districts, can produce at less cost than the mills in our province. However, a few facts may be mentioned which should alone suffice to demonstrate this point and obtain the co-operation, not only of our provincial government, to whom it is most important, but also of our Dominion government, in dealing with this matter and obtaining of a preference duty.

### Why a Preference is Deemed Essential

The logging operations in British Columbia are more costly owing to the topographical nature of the country. It costs the British Columbia lumberman more for his machinery and sundry requirements, for the installation and upkeep of his plant. Owing to the surplus of labour in the United States the wages of the lumbering camps, mills and factories are lower on the average than those prevailing in British Columbia. In most cases San Francisco shipping interests control the vessels carrying cargoes of lumber; consequently our mills are handicapped in this regard, as is only natural wherever preference can be given. American-owned vessels will load at American ports and assist American industries. It would also be found that cargo-carrying vessels, through different added expenses, make a slight discrimination to the detriment of British Columbia ports, making a difference of some 25c to 50c a thousand on the freight.

All these items materially increase the cost of production and delivery, and would be counteracted by a preferential arrangement.

I would be rather averse to suggesting what inducements—should any be required—our government could offer to the Australian government in support of preference on lumber, but it might be mentioned that at the present time Australian hardwoods enter Canada free, and doubtless there are many other commodities which could be added as time goes on, and population increases, on which a suitable market could be found in Canada.

It is also worthy of consideration that, should a preference on British Columbia lumber become an established fact, it would be more than likely, in view of the enormous benefits to be derived, that a fleet of lumber-carrying vessels would be engaged on time charters, or owned by Canadian capital, which would stimulate shipbuilding in the province, and create a merchant marine having its home port in British Columbia, with all the benefits accruing therefrom.

In conclusion, and speaking in the broadest sense, in advocating so strongly that a preference be given to Canada on lumber imported by Australia, it is of the utmost importance that every effort be put forth to establish closer trade relations between Canada and Australia, and not, as heretofore allow our friends to the south of the line to divert this trade into their own channels, to the detriment of ourselves.

If both our Provincial and Dominion Governments took hold of this matter, and presented it in the right light to the Autsralian Government, I feel sure that a favourable understanding would ensue, and that the benefits to be derived would be inestimable. and when once the trade between these two countries, built on a preferential tariff, is well under way, it will lead to closer relations in other lines, and enrich the peoples of these sister Dominions.

## Preservation of Structural Timber

An interesting book upon "The Preservation of Structural Timber," by Howard F. Weiss, Director of the Forest Products Laboratory of the United States Forest Service, has been published by the McGraw-Hill Book Company, Inc., 239 West 29th Street, New York. The growth of wood preservation during the past ten years has been exceedingly rapid and there are now nearly 100 plants in operation turning out over 125,000 000 cubic feet of treated wood annually in the United States. There is every reason to believe that the growth of the industry has not by any means reached its climax, as many thousands of feet of structural timber are used annually that are not being treated, but which should and eventually will be. For these reasons the book by Mr. Weiss is exceptionally timely and valuable. The material in the book is taken largely from lecture notes prepared by the author for the civil engineering students at the University of Wisconsin, and it contains much reliable information of fundamental importance to engineers, foresters, lumbermen, students and all who are interested in this subject. The book is extensively illustrated with halftone engravings and diagrams which place the subject very clearly and practically for the reader. A very complete index is added at the back of the book, making it of special value as a reference work.

# A Successful Retail Collection System

By H. R. Isherwood

**HOW A LARGE FIRM REVOLUTIONIZED ITS BUSINESS AND PLEASED ITS CUSTOMERS.**

John Doe,
Sawyer, Wis.
Dear Sir,

After January 1st, 1915, this business will be conducted on a strictly cash basis

You will get the benefit

We are aware of the fact that the general public does not realize how important it is to the buyer, how advantageous it is, to buy for cash. We know this because so few have taken advantage of our regular cash discounts.

We want to make it clear to you that you DO reap real benefit, which it is the purpose of this letter to explain.

First, get it firmly in your mind that WHEN YOU PAY CASH YOU GET THE BENEFIT, IN CASH DISCOUNT, AND IN CHEAPER PRICES—ALL CASH IN HAND—MONEY THAT YOU WOULD NOT HAVE OTHERWISE.

If we sell for cash, we can pay cash for our goods and can buy them cheaper; thus we can afford to sell cheaper, for in paying cash we too get a discount. We not only get this cash discount on our purchases—but we can charge a smaller profit because we have no uncollectible accounts to charge up against the expense of running our business.

Then, too, running a credit business requires more capital than a cash business—and more capital means interest on the extra investment. It means just this, in your business, or our business, or anybody's business. If you need more capital than you have, you have to pay interest to get it, don't you? That's it in a nutshell. Now—

In putting our business on a cash basis, we have two distinct propositions to make you—business propositions that pay you interest on every cent you spend with us.

CASH OFFER NO. 1.—After January 1st, 1914, we will give you a discount of 4 per cent. on all payments made us in advance on estimates, or on bills of material which we furnish, the same basis as bankers pay on certificates of deposit.

There is MONEY for you in this CASH OFFER NO. 1.

There is so much actual profit in it for you that you can MAKE MONEY by BORROWING MONEY at the Bank and PAYING 8 PER CENT., just to have the cash in hand to get this 4 per cent. discount, because—

FOUR PER CENT. DISCOUNT IS THE SAME AS 48 PER CENT. INTEREST FOR ONE YEAR.

CASH OFFER NO. 2—Our second proposition is to allow 2 per cent. discount on all 15-day bills paid the 15th or 30th of each month. That is, you may purchase material from the 1st to the 15th and then make full payment and get the 2 per cent. discount. The same applies to material purchased from the 15th to the 30th; if paid on the 30th, you can get the 2 per cent. discount.

TWO PER CENT. DISCOUNT IS EQUAL TO 24 PER CENT. INTEREST FOR ONE YEAR.

When all is said and done, the best that can be said of credit is that it is convenient. Credit is largely responsible for the high cost of living. It is a business proverb that the man with the cash buys the cheapest. Every business man who gets this letter knows this, whether he is a merchant or a professional man, or is in the business of selling the labor of his brain, or hands, for so much a month, or week, or day.

Sawyer Quality—Sawyer Prices—and Sawyer Service are known to you as good, honest, fair and helpful—With this change to a strictly cash basis you will be more than ever glad to trade with us, and pleased with our goods and our Service.

Do a little figuring for yourself. Whether you are a big buyer or a little buyer, the facts and figures given above show you a real, genuine, cash-in-hand saving HERE.

Let us add that while we do not intend to curtail or refuse credit in the future, to the deserving, we must and will insist upon a different procedure of settling open accounts. As retailers we must settle our accounts within 30 days, or at the most, 60 days. We shall ask the same settlement from our credit customers. That is, all accounts are net, or due in 60 days, and must be settled either by cash or bankable paper, at a rate of interest that will be accepted by the bank.

While we adhere strictly to the foregoing, we wish to give you our cordial assurance that any courtesies we can extend you, will be cheerfully accorded in the future as in the past.

Yours very truly,
SAWYER LUMBER CMPANY

Editor's Note—The author of this article is General Manager of the Sawyer Lumber Company, Sawyer, Wisconsin. He gave the subjects of credits and discounts long and patient study and then evolved and put into practice, with astonishing success, the system which he describes. We believe that every retail lumberman should study Mr. Isherwood's system and adapt it to his own circumstances. Before introducing the system, just one year ago, Mr. Isherwodd sent to all his customers and prospective customers, the accompanying letter describing the proposed changes. In order to give our readers a clear understanding of the whole subject we publish first a copy of this letter and then Mr. Isherwood's report to the Canada Lumberman upon the system after it had been in operation for 12 months.

I presume that our experience is the same as that which retail lumberman have in other sections of the country. At the close of the year's business we would have practically 50 per cent. of our annual sales on our books. It seemed that it was the idea of the customer in the first place to see how cheaply he could buy from us and then see how long he could make us wait for our money; considering it an insult if we charged him interest on his account. However, before adopting this system we were charging 6 per cent. on all book accounts over 60 days. We have also endeavored to adopt practically the same terms as the wholesalers were giving us, namely 2 per cent., 10 days, but we found from experience that this was very unsatisfactory, due to the fact that when we sold a customer a bill of lumber and gave him these terms, usually it was weeks and sometimes months before he would complete the hauling of his material, and it is quite difficult to figure out the discount for him as his deliveries started from various dates after he placed the order for material. The result was that the only way we could settle was after he had finished hauling his bill then allow him a 2 per cent. discount on the whole of his purchase, which gave him the advantage.

So, during the latter part of 1913 we began to study out the system which we have adopted and can assure you that the idea required a great deal of study and I interviewed a great many dealers in Wisconsin, taking up the subject of discount and terms and made the suggestions along the lines which we have adopted, but we did not receive any encouragement to speak of. They seemed to be under the impression that it was not possible to put a lumber business on a cash basis and therefore, did not give much encouragement toward bettering the conditions. But I have always been under the impression that conditions could be bettered and that our patrons, as well as the patrons of every merchantile establishment, were not treated on an equal basis—that it was an injustice to charge the cash customer the same as the man who makes you wait six months and even longer. However, the result of our study is outlined in the circulars and literature that we sent out and the results, at the closing of our business of 1914, are away beyond our expectations. For instance, book accounts are a little over 50 per cent. less than 1913, our cash receipts on the whole are over 70 per cent. greater, and we have increased our annual sales a little better than 10 per cent. over 1913, and the conditions in our territory for 1914 were on about an equal basis with 1913.

The system we have adopted has many advantages—it brings us into contact oftener with our customers—those who take advantage

of the 2 per cent. discount on settlement dates, which are the 15th and 30th of each month. We are thus brought into contact with them twice during the month. Our dealings with our customers are more satisfactory, as, when a cutsomer comes in to settle his account and take advantage of the discount, the transaction is fresh in our minds—not over 15 days, and at the outside not over 60—and any errors are easily adjusted.

Now, in-as-much as we have made the advantages of our position as explicit as we possibly can in adopting these terms, outlined to the customer the advantage in paying cash, what he derives from it in interest or the same as dividends. Our proposition is one that places every customer on an equal basis, giving them a fair and square deal by giving cash consideration whether paid in advance or paid on the two settlement dates, or on the net date. It gives us the opportunity to force the terms after the discount date is past, as in the first place we have given them the opportunity to take advantage of the cash discount and if we did not insist on our customer giving us a bankable note at a bankable rate of interest we would not be treating him on an equal basis with those to whom we have given the discount. By setting two distinct settling dates in which our customer can take advantage of the 2 per cent. discount it overcomes that big obstacle of dissatisfaction and is the only method that we could figure out that would work out satisfactorily to both the dealer and customer, giving no opportunity or chance whatever for advantage being taken in either way and therefore doing away with disputes which often arise in the old method of offering discount for cash if payments were made a certain number of days after delivery. By setting these two distinct dates, as the time passes, they are impressed upon the minds of our customers, so that every one in our community soon has these dates impressed upon his mind.

One of the most important things in adopting this system, even though you go into detail and make it as explicit as we have, is to be able to explain all the advantages to your customers, when they come into your office, and to figure it out with them so that they understand thoroughly all the advantages. This information then travels from one customer to another. It is discussed among them, and it causes them to do some thinking and figuring. We, of course, impress the advantage upon our customer by illustrating the interest we are paying on his money for the period of time which he is asking for credit.

### Other Merchants Were Sceptical

Now just before adopting our system, and when we had every thing in readiness, I called upon our various merchants endeavoring to interest them and get them to adopt a similar system. While every one of them admitted that the conditions of the credit system were anything but in their favor, and that the customers were getting the advantage, they would bring up in each instance the belief that it would be necessary to have their competitors in, or in other words have all business on the same basis, or there would be no benefit in adopting it. I also wrote to the different banks in two counties, in which we have yards, being nine banks in all. I asked them for any suggestions or criticisms that they might have to make or offer on our system, and I only had replies from two out of the nine banks, therefore we did not get much encouragement from the banks. However, these are the institutions that should show an interest in a system of this kind, as it is of direct benefit to them. I believe it is of vital interest to every banking institution to use their best efforts in educating the patrons of their banks, no matter wheher hey are merchants or farmers or men in any other occupation, regarding the advantages of doing business on a cash basis. But, we did not get any co-operation or encouragement from the banks. However, our competitors and our merchants all had the same opportunity for adopting the system or any similar one. We adopted it single-handed and we have accomplished results that are far beyond our expectations. I even doubt very much whether there are any retail lumbermen or merchants who have accomplished more in twelve months' time, than we have with our system, toward placing our business nearer to a cash basis. There is no question but that the same system can be adopted by any of the retail lumbermen, especially in the country towns where farming is carried on in the surrounding district, and where business is not done wholly through the contractors. It can be adopted regardless of competition—in fact it is a great leverage for the retailer where there is keen competition.

We find that it is doing away with our long time accounts, and the terms which we are applying to our estimates have enabled us to take in thousands of dollars in advance and we have taken in equal amounts on settlement dates, the 15th and 30th. We use the triplicate ticket machine and render tickets to our customers daily. On each ticket we stamp our special terms. Now many dealers, whom I have discussed this with, think that it is impossible to get a customer to pay money in advance. There are many right in their territory sending their money to mail order houses or to other firms many hundreds of miles away from them, placing their money in the hands of people or firms whom they possibly never will see. The customer can of course examine the goods when they arrive, but the shipper has his cash. The dealer right on the ground, knows his customer personally and has the goods on hand. Why isn't he entitled to cash in advance? On our term slips such as we attach to our estimates, we show the difference between the time price and the cash in advance price. The cash in advance price for an order worth $500 on a time basis, is shown as $480. When the customer sees the great difference between the time price and the cash in advance price, it sets him thinking, and in many instancss where he has obtained figures from a competitor or from a mail order house, the time price will possibly be five or ten per cent. higher than the figures they have, but the cash in advance price will be a little lower on the same basis, giving you a wonderful opportunity for putting up a strong argument in your favor. There is a certain pleasure in doing business with a customer when you figure up his estimate which may amount to $500 or more and receive the cash in advance. In the first instance it places you under greater obligation to the customer when you receive his cash in advance than it would if you were only filling an order that is to be settled after delivery. You connot help but feel under obligation to such a customer and you cannot help but appreciate the cash, which makes you feel that you want to do everything in your power to please him.

**Terms**

### Liberal Discount Quite Feasible

Many of the dealers think that the discount we are offering in advance is greater than we can afford. However, this is where we do not agree with them, as I know from experience that if necessary we could give even a greater discount. My reason for making this statement is that, in the first place, we have had the experience the same as others of carrying many of our customers on our books for months without ever receiving any interest. It is very common for the local merchant or lumberman to carry these accounts, borrow money from the bank to meet his bills, paying a good rate of interest. But he does not stop to think that his customer is doing business on his money and that he is paying the interest for him. In the second place, in selling a bill of lumber on a cash discount basis, if it is a large bill, or especially a house job, it usually is sixty or ninety days before the last delivery is made—therefore you have the use of your customer's money during this time, so that it gives you an opportunity to discount your invoices.

Then again regarding the customer objecting to paying cash in advance; we have had experience with customers and in many instances they want to take advantage of the net cash in advance price and pay when the goods were delivered. This especially has happened when we were in competition with the mail order houses. I put the matter to them in the light that it was just simply a question of whether they would place the same confidence in us as they had in the mail order houses. If they would we were entitled to the same terms, and at our place of business they can see us at any time they may wish, and see our goods in stock. By using arguments along this line I have never failed to get the cash. Another advantage of offering discount is when you are quoting prices per M. and the customer will come in who will undoubtedly want a small bill of material or estimate figured on, and he will want prices per M. You may quote him prices per M. and in many instances they will endeavor to jew you down, say for instance your regular price is $24, your customer wants to buy a bill of material and you cut the price $1 per M. asking him $23. The customer as a rule will advertise this price among his neighbors. If you use the discount, you keep the regular price before him, and in nearly every instance he will advertise the regular price among his neighbors. He may mention the discount, but he will not be giving his neighbors information that will cause them to say if they ask for prices per M. on a small bill of lumber and you ask them the regular price, that their neighbor has purchased at a better price. The advantages in favor of the system are unlimited and it is impossible for me to cover and explain all of them, but I am positive that, if the retail lumbermen throughout the country were to take hold of the proposition, making a thorough study of it, becoming thoroughly familiar with the discount, and its advantages, so that they would be enabled to make the proposition clear to their customers, they would have the same success that we have had, and would find greater pleasure in doing business, and better satisfied customers. Both the dealer and the customer would benefit from a financial standpoint.

## Lumbering on the Saskatchewan

The timber in the Prince Albert region is mostly spruce, with a little tamarac, the average diameter of the wood cut being about 14 inches at the stump. The lumber put out by Prince Albert compares very favorably with the harder woods found in other lumbering districts of the Dominion, and can be used for practically every commercial purpose when manufactured. About the middle of October the lumber companies hire their men and get in their winter supplies. The first snowfall gives the date for hauling the cut logs by horse draft to the skidways, where they are picked up by the ice locomotive, which takes them to the nearest waterway, where they are dumped and left till spring when the ice melts and the drives begin. "Driving" consists in floating the timber down stream, the drivers with calked boots keeping the raft on the move until the river becomes wide enough for the formation of rafts. Raftsmen then bring this conglomeration of tumbling logs into some sort of order and form rafts consisting of two or three thousand logs which are then towed down to wherever the sawmill carries out its wonderful work of reducing the great rough timbers to mathematically accurate pieces of finished wood ready for the manufacturer and builder.

First comes the rough timber from the mill pond, caught by the endless chain, dragged in lengthways, and dumped on the log deck where four or five logs are already waiting to be operated on.

Then from the log deck one log falls into the iron clutches of the carrier, a rail trolley worked by two engineers, which rushes ceaselessly back and forth alongside the band saw, like some evil genius feeding an ogre in a fairy-tale. A shrill scream follows as the saw bites through the roughwood like butter, and then in place of the rough log is a smooth plank. Back snaps the carrier; the saw shrieks again, and a plank falls away; once more, and another plank is shorn from the side of the forest giant; and so continues the process until the whole log, perhaps 25 feet long by 20 inches in diameter, is sawn up into rough planks of whatever thickness is required by the quality of the wood.

Now another series of endless chains snatches these planks and carries them to the "edger," a machine for cutting the lumber to the correct width, and thence to the "trimmer" which equalizes the length. Edgings and trimmings are carried to another part of the mill, where they are made into lath 4 feet long, and there is little left when the lath-makers are through. Such as there is the mill sells locally for firewood. The sawdust is utilized for keeping alight the big furnaces that supply the steam power to the machinery. There is no waste here.

Then the planks, now of uniform length, width and thickness, are passed out to the sorting shed, and piled for seasoning acording to their quality and description. When in condition the rough planks are run into the planing mill, thence to emerge in the shape of finished products—sidings, floorings, moldings, shiplap, etc., and then they go to the flat cars that carry out of Prince Albert two trainloads of lumber a day for the hungry young cities that spring up on the prairies like mushrooms after rain.

### The Romance of the Lumber Business

Listen with all your might as the superintendent of the mill shouts facts and figures about feet and prices into your ear above the screaming crescendo of the saw; get a peep into the roaring Gehenna of the furnaces; walk through the long fragrant aisles of piled up spruce in the sorting sheds; watch the blue-clad men loading long strings of flat cars—150,000,000 feet are turned out annually, you remember, and two trainloads go out every day—and you will see pictures that one need not be an artist to appreciate. Here is not only the picturesqueness of color—blue overalls and creamy-yellow-pink planks; dark pines and silver river; dim-vistaed interiors flashing with the steely ribbon of a saw, the orange glow of a forge, the slanting spokes of sunshine in the dusty air—but the romance of trade, the romance of man pitted against nature and beating her romance of derring do just as real as when Sir Walter's knights whaled the everlasting tar out of each other. And when you look further and see how many little hopes of new homes these 4-inch and 8-inch spruce planks mean all over the prairie West you realize that the romance of the lumber business is the romance of the making of a new empire.

Government returns in 1913 state that the largest timber belt in the Dominion extends for 3,000 miles across the continent, and is 200 miles wide, and that this zone, which is practically inexhaustible, traverses the northern portion of Saskatchewan. Prince Albert stands in the northern fringe of this area and therefore the settlers in this district have no fear that they will suffer from lack of either building material or of fuel, and this is a big factor which must appeal to the homesteader with double force.

The lumbering interests help here to build up the country. The settler is sure of employment during the winter if he can swing an axe or a peavey—or if he is willing to learn. Nine-tenths of the men who get out the logs all winter in the limits forty, fifty or a hundred miles the other side of the North Saskatchewan are farmers the other seven or eight months of the year. No longer does the coming of the "jacks" to town mean a season of revelry and riot when decent householders stay indoors. The men from the camps stay in the city only as long as it takes them to get a train for their quarter-section, or maybe buy a piece or two of farm machinery. The average lumber jack no longer lives by wood alone.

### Largest Employer of Labor

The lumber mills are the largest employers of labor in the district, and are modern in every respect, the machinery being so perfect that it constrained a well-known scribe to refer to the works as the "Human Mill," and so brilliantly does this industry shine in the city that Prince Albert has been referred to as "The City of the Silver Saw." The number of one company's employees varies from 2,000 to 1,000, according to the season of the year, and the great plant runs continually day and night for the major portion of the year.

At the freeze-up the farmer leaves his hardened acres and hires out to the lumber camp. Last winter 10,000 men must have been so hired there, and most of them were homesteaders. Some, of course, were professionals from the camps in old "Kebec," from Michigan or Minnesota, or the other lumbering States. For a few days they linger in town, and then they are gone to the deep woods to reappear no more until the pussywillows hang out their catkins along the river's edge. Recently wages ran from $25 to $45 a month with board, and four months' steady work was a surety. Once, that roll would have lasted about a day and a half buying drinks for the crowd over the Prince Albert bars; now the quiet-eyed, taciturn men who come in from the camps reckon it in terms of a new binder or a couple of grade Jerseys and some Government-inspected seed wheat.

This condition is one that will last for a long time, for although Prince Albert will grow bigger and more varied in its interests, lumbering is going to remain a big asset to the city for a long while. A recent computation places the total amount of timber in the limits of the Province of Saskatchewan at 5,000,000,000 feet, or roughly 2,000 square miles of limits. The total cut in the Province a year ago was about 175,000,000 feet, so that, allowing for damage from fire and other sources, it will take fully twenty years to cut out the present limits. Each year, of course, the camps are moving farther away from civilization. The nearest now is thirty-five miles from Prince Albert and is reached by team. Farther to the northwest, where the Big River Lumber Company operates a five-hundred-mile-square limit, Mackenzie and Mann have pushed steel the ninety miles to the mill. As the present limits are cut out the companies move further back, although at the same time it will be possible to cut over the limits which are being cut now. Indeed to-day some of the limits that were cut over ten or fifteen years ago are being re-lumbered.—John S. Woodward in the American Lumberman.

## The Successful Country Retailer

The successful retail merchant of the rural districts is frequently pointed out by his less successful brother in business as a man who has gained his prestige in some mysterious way and only too often the question of the honesty of his purpose enters into personal reflections made on the subject. In consequence when we learn of the man who regards the achievements of such a successful individual as an inspiration his thoughts are worthy of reproduction.

"It is an easy matter," said a retailer to me recently, "for the country merchant to condemn the policy of the department store in the city of forty or fifty thousand inhabitants as well as those of the larger cities, of reaching out and drawing trade from the farming sections, from fifty to a hundred miles or even greater distance, as unfair and the buyer who patronizes them as shortsighted and his practice not within the general scope of home and community development. In many respects the arguments they may have to offer in this connection are full of truth and sound basic principles, but, this merchant has much to learn from the very concern he criticizes. The proprietor of such an establishment pays as much attention to keeping his country customers informed about what is going on in the store as he does to keeping his city shoppers posted through the advertising columns of the local paper. The merchant values his country patronage and considers it worth any effort that he may exercise in controlling and attracting it. He will tell you it is a mistake to think that the country consumers are either small buyers or bargain hunters for cheap goods. He will further tell you that the house at a distance that sells such customers goods of poor quality, below certain standards, even though prices are below local quotations, does not continue to receive the best patronage.

It is true that there will always be a certain class of people who will buy anything that is cheap, but the percentage is small.

### Learn What Patrons Want

"These merchants usually make it a business to learn as near as possible, customs and habits of the people with whom they deal. This does not necessitate an extended investigation into their mode of living or anything of that nature, but simply requires close observation of their customs and methods of dealing with merchants. In this manner he finds out that a great many country buyers still cling to the end-of-the-week buying habit. To this habit he caters entirely,

and further intensifies their interest by conducting such legitimate sales as every buyer has a keen interest in when the saving is apparent and is on standard goods. If this attracts them they are even more attracted by the regular arrival of new merchandise in different departments and the store appeals to them most of all as a place where something is always happening in merchandise. This is a feature of business that a great many retailers of lumber overlook. They seem to forget for the moment that the suggestion of the arrival of a new car of flooring, for instance, particularly well matched and milled, might be of interest to the community. They sometimes forget that in the power of suggestion lies the very essence of sales prospects. I have even known retailers to add new lines to their stock without making any particular public announcement of it. Much has been said about the handicap suffered by country stores in competition with the city stores and mail order houses but undoubtedly the chief difficulty arises out of the fact that the customers of the average country merchant have never been taught to watch his place as one where something interesting in merchandise is happening at all times. The country merchant gets in goods from week to week but the customers usually have to discover this fact for themselves or go without the knowledge. He may have planned on putting a ventilating system in his barn but has had no previous information that his local lumber dealer could install a very complete system of this nature. He may have desired to put a new roof on his chicken coop but last time he inquired for roofing the local dealer had only the three ply kind where he figured one ply to be the most economical and to meet his requirements. He has not been informed that the local dealer has had a new shipment and that the one ply is in stock.

"From time to time the city merchant gathers up a lot of odds and ends of merchandise and closes them out at cut prices, turning them into ready cash and in turn puts the money into fresh stock. This is seldom done by the country merchant and almost never by the retail lumber dealer. I recall at this time a story that was told to me of a banker who was induced to put in a retail lumber yard in the town in which he did his banking business and among other things had purchased some five-eighths inch hardwood flooring. Against advice he had purchased large quantities of this and as the district in which he was operating was one in which new buildings were the rule, he naturally did not have a heavy call for this thin flooring. This stock stood in his lumber shed for some five or six years and the salesman who originally sold the stock finally suggested that in order to reduce his holdings he advertise the stuff and sell it at about cost. An advertising campaign was started, the principle of it being to show just how easy it was to lay these floors right over the old-time floor and as a consequence the demand picked up very greatly and the stock was reduced to a point which did not make it a burden. Much of the loss on this purchase could have been done away with if the sale had been started after it was apparent that the stock was not going to move rapidly through the usual channels of buying. It is, however, a good example of what the retail merchants expect in the way of self-selling goods.

"Manufacturers of special lines to be handled to the trade through the retailer complain of this bitterly; say that the retail lumber dealer does not cherish the problems of competing with the direct silo house, or the direct culvert manufacturer, or the direct sellers of any of the kindred lumber yard specialists. In this respect it seems to me that the lumber dealer might look himself over carefully and make note of his weaknesses in this line. Any manufacturer of special or regular stock handled through the retail lumber merchant is always willing and pleased to co-operate in every respect with the retail merchant who handles his goods. This is merely a matter of self protection and self interest. Yet he says it is seldom that he has an opportunity to help work out the problems of the retailer who has perplexing complications before him. In his estimation the retailer is all too willing to throw up his hands and say 'It can't be done.'

"In meeting this outside competition the country merchant has come to attach too much importance to the fancy attractions of cheapness, but the responsible concerns that bid for this very business are ready to assert that cheapness is not the best appeal to country customers. The secret of the whole thing is that city stores use merchandise as news. They draw customers because everybody is interested in seeing what there is new, novel, labor or time saving, and anything that helps to develop the comforts of life. The country merchant cannot compete in size and range of stock, but he can do this much and should show his holdings to better advantage. He can teach his customers that when visiting his place of business they will find some one ready and capable of giving expert advice, that they will see new goods, and latest types of materials, building designs, and in other words could hardly fail to make such a visit without going away with added knowledge or something which has made that visit worth while. It is then up to the dealer to make this a true realization. On a small scale almost every country store can utilize these city store methods. It is common mercantile experience that these methods pay whenever used with intelligence."—Mississippi Valley Lumberman.

## Specifications for Kiln-Dried Lumber

By Harry D. Tiemann

There are few manufacturers of wood who have not had complaints of one kind or another as to the unsatisfactory behavior of their products after they have left the factory in apparently perfect condition. Sometimes the troubles such as cracking, warping, or cupping are the purchaser's fault, sometimes they are due to conditions to which the product has been subjected during handling or storage between times, and sometimes they are due to the fact that the wood was not suitably dried for the purpose to which it is uitlmately put. In any case the manufacturer is likely to get the blame; and the trouble indiscriminately laid to the drying conditions. The manufacturer in his turn passes the judgment along to the dealer who supplied him the "thoroughly kiln dried" or "long air seasoned" material. But who is to say whether the drying in fact did fulfill the specifications, and furthermore whether the specifications were at all adequate for the purpose? Grant for once that the exact condition of the lumber most suitable for the article in question was known, and that the manufacturer could state just exactly what he needed so as to leave no room for dispute as to the product furnished him: How much saving would that be all around? Suppose he could specify the amount of moisture that must be contained in a certain shipment of lumber in the same way as specifications for steel call for certain amounts of phosphorous and sulphur and provide for its rejection if it does not prove up upon analysis; suppose we could say that a given lot of lumber must be dried to an average of 6 per cent. moisture, with a maximum variation of two per cent. at the time it is removed from the kiln, that the interior must not contain more than one per cent. excess moisture over the surface; that upon resawing, it must not cup, due to case-hardening, more than a given amount; that it must not have been heated above 160 degrees F. at any time in the dry kiln. It would not only forestall many of the complaints but it would most certainly lead to much more efficient and correct methods of drying. More than this, it would give a basis upon which complaints of defects now ascribed to improper drying could be refuted when the defects were in reality caused by improper treatment after shipment from the factory.

The questions will naturally be asked: Are we yet in a position to draw up specifications of this kind? Do we know enough about the subject?

It is true that present practice is too diverse to warrant advocating refined specifications all at once, they must come gradually, and in step with improvements in dry kilns and methods of drying. But it is fair to say that nothing would tend with greater force to do away with bad practice and carelessness in kiln drying and the institution of scientific intensive methods to the decided betterment of all lumber products, than the acceptance of uniform logical specifications for kiln dried material.

While there still remains much to learn about the moisture relations of wood, and the field of the unknown may greatly exceed that already explored, yet I feel that there is enough known about drying wood to form a foundation for at least a tentative set of specifications for kiln dried lumber.

The United States Forest Service has been conducting a series of experiments in kiln drying wood for a number of years, and has designed a kiln in which the three fundamental requirements of good drying are accomplished—regulation of humidity, ample and uniform circulation, and control of temperature. In this kiln the humidity is under control of the operator, and the temperature is automatically regulated. Two of these kilns are in operation at the Forest Products Laboratory at Madison Wis., and others are under construction. The Forest Service will be glad to lend assistance to the movement for the betterment of the drying of lumber through the data derived from experiments and study. A beginning must be made somewhere, before progress can take place toward a general improvement of conditions in this line of proper specifications for dried lumber. The situation is somewhat analagous to the serious setback of spring, I believe it was in Montreal; the trouble seemed to be that warm weather could not come until the ice broke up in the river, and the ice could not break up until warm weather came. Yet it is safe to suggest that both things happened in the course of time!

But who shall start the "ball a-rolling?" It seems to me that right here is the need for a dry kiln association—not an association of dry kiln manufacturers nor one of lumber dealers, but an association on broad lines, of national scope entirely untrammelled by local interests or special influences, and with a constitution to that effect. It should include both hardwoods and softwoods, and thus tend to eliminate friction between contending interests such as exists at present between some lumber associations where each is promulgating their own species and with no thought of the broad principles of the best utilization of wood as a whole.

A chain is no stronger than its weakest link and the finished lumber is no better than when it comes from the kiln, however nicely it may be varnished. More attention given to the kiln drying link of the lumber business will mean a stronger position for lumber in the future.

## Planning the Year's Business Campaign

Another year of experiences has been added to the sum total of our knowledge, and it remains with us whether we profit from them or otherwise. To the older dealers most of these experiences have been a repetition of what they have had before, but to the younger men, many of them have been new in character or more or less profitable. All experiences are beneficial, though they may not at the time seem so. A mistake that entails a loss is regarded as an injury but out of it comes wisdom that gives us discretion and makes us cautious about making the same mistake again. Every year we make a number of mistakes in our business. The smaller ones we are apt to forget. The more serious in character and results we remember and they exercise a governing influence in our future actions. No doubt most of you made some mistakes last year that you won't forget for awhile at least and the recollection of their experience will "put you wise" to getting caught again the same way. But the lesser mistakes you will keep on making because of the changing form of the cases in which they occur. If you ever lose a large account from the failure to file a lien in time you are pretty sure not to do so again, but you will continue to get caught on small amounts, solely because at the time they seemed plausible in their promise of collection.

It is a common fault with most business men to allow themselves to continue doing things which they know are not warranted by good business principles. One of our best business men here told me the other day that he knew if he followed the dictates of his best business judgment he would make fewer mistakes than he did. He admitted that he sold goods to people sometimes where the possibilities of their paying for them were in fact too small to take a chance on. We like to think in such cases that there is something back we don't know of that will favor us, and not until we get "stung" do we know we were mistaken.

After invoicing and figuring out the inventory and getting a summary of the year's business, I've no doubt that the results will on the whole be fairly satisfactory to the large majority of dealers in the country districts. The business this year has been more favorable to them in the making of profits than it has been to those in the larger cities. If business has not been profitable to country dealers having a fair trade it has been chiefly because of their unfriendly relations with their local competitors; which is the greatest mistake they have made during the year, and the outlook for such dealers cannot be said to be a cheering one for the coming year. In the majority of such cases it is a mutual mistake of the two dealers and can only be rectified by a mutual willingness and action together. Each dealer is laboring under a mistaken understanding of the other fellow and the most important, as well as being the right thing to do, is to get together and correct the mistaken ideas concerning each other. Find out the differences that cause the friction, and then adjust them. There are many ways in which the two dealers in a country town can work in unison without having an agreement on prices. It is a fallacy with many dealers to think that the maintenance of prices is the prime object of getting together and if this can't be secured there is no use for it. Now, of course this is eminently desirable, but in the obsession to secure it we lose sight of the fact that by working together in friendly relations in promoting and developing the business of the locality this matter of prices will regulate itself to the mutual satisfaction of both parties.

### No Visionary Scheme

This is no unworkable theory I am talking about for I have seen it demonstrated in several instances. I live in a community where the business men are working together in promoting the interests of the whole community. Anything that comes up that will make it a better town for everybody to live in is taken hold of and pushed to a successful completion. In contrast with former days there is now none of the old time cut-throat competition and yet there is no agreement on prices. There has developed instead a keen competition in business service, an emulation that is making better business men of them. The stores that sell the most goods and get the best prices are those that give the best service. It is only the "cheap skates" who cut prices to get business, and they have no standing with the higher class of merchants who rely on quality and service to draw trade. No doubt you probably think that you are rendering all the service you can afford in carrying the amount of accounts you do but this is a service that requires no great amount of brains to give. The cheapest kind of a business man can do this with the least exertion, but it takes a higher order of business ability to give a service that will create more business through the educating of public sentiment for a better class of buildings, and in other ways developing the productive capacity and spending inclinations of the farming community. Now, if both dealers in a town will get their heads together and work to give this kind of a service the question of satisfactory prices will be settled without any particular agreement. It is hard to get good prices without working to get them by giving the service to create and draw the business. It is made easier if two dealers will combine their efforts to obtain it and they make a costly mistake if they don't do team work for this purpose.

It is often said and generally agreed on that there are too many yards in the country districts. That is one thing we do agree on without any combination. The only solution that is seen is the gradual freezing out of the weakest, which in this case, means the poorest business men. But this is a slow and costly process in the retail lumber business and really means the getting of business by taking it from the weaker yard and it is done too chiefly by the cutting of prices.

There is a growing sentiment among the thinking minds of this country in favor of turning our attention to making our natural resources more productive than they are. We are coming to know that our farming land is not producing half what it is capable of and our whole agricultural industry is backward in its productive results. As one result of this, our country towns are lacking in progress. This sentiment I speak of is resolving itself into a forward action for a more aggressive improvement of these conditions. There is a nation-wide movement to educate public thought and sentiment for it. The danger is becoming apparent of building up our large cities at the expense of the country towns and various ways are being devised for diverting population to the farming districts and keeping it there by increasing the productivity of the farm and making both the farm and the town more attractive to live in.

### Must Create New Demands

This is one of the great economic questions of the time for our national solution and it has a direct bearing on this question of multiplicity of country lumber yards. With the growing conditions of fewer land owners and more farm renters there is not going to be very much increase in the present normal demand for building material in the country towns and on the farms and with the growth of co-operative agencies among the farmers, the mail order house, and other forms of outside competition, the lowered margins of profit will necessitate the handling of a larger volume of business with the consequent fewer number of yards. In view of this, therefore, it looks like a short-sighted policy for country retailers to fight among themselves for what business there is and lose profits they are legitimately entitled to, when by using common business sense they could work together in a lawful harmony to preserve them. It looks, also, that if the present number of country yards is to continue there has got to be some concerted effort by the dealers to develop the possibilities for business in their respective localities by the means of creating and stimulating the demand for more and a better class of buildings, and along with this also extending their active co-operation with other agencies that are working for a greater productivity in farming and thus increasing the buying capacity of the farmers in their localities. In order to do this more effectually there must be a working harmony among the local dealers. They have got to consider their locality as one big farm and they acting as partners for the purpose of intensively cultivating it for the production of more business. When dealers turn their competitive instincts in this direction there will be a longer extension of their lease as country retailers. If they don't the days are numbered for a good many who are now scrapping for a "place in the sun."

The trouble with the retail lumbermen has been the misdirection of their competitive efforts to get business, which has resutled in a waste of competition among them. An old dealer once said to me, "I believe there are more darn fools in the lumber business than in any other," and he was candid enough to add, "and I don't know but I've been as big a one as any." Perhaps some of you, too, in looking over the last year's business will admit to yourself what the old veteran did to me. Men work hard in striving and competing in a competition that is a large part of it pure waste of effort and they never seem to realize that it is so. About all they get out of it is experience but it is experience that doesn't keep them from doing the same things over again. Lumber dealers might learn a lesson from the railroads of this country that now, having their rates fixed by Government Commission and being unable to compete for business in this way, have directed their efforts for increasing their business by developing their territory into greater productiveness and also competing in service to the public. Supposing now, that the retail lumbermen were obliged to do business on a price schedule fixed by the state or federal authority. What would they do in that case to exercise their competitive disposition? Don't you think that they, too, would do as the railroads are doing in making their territory more productive and attracting business by better service There may be flaws in this illustration but you will, I think, get my idea sufficiently to understand the application.

### They Let Lumber Hibernate

Years ago it was the general rule for lumber dealers, after the winter had shut down, to forget, as it were, anything concerning building matters and turn their attention to looking after the coal end of their business. Along about the latter part of February they would begin to enquire of the contractors if they had heard of anyone who was talking about building in the spring. If any were reported

as talking that way, the fact was noted as one of the favorable signs of a spring trade, and the dealer would be content to wait till the party came around to the office to talk with him about it or till the contractor had brought a bill to get an estimate on. Perhaps he might run across a party up town who he had learned had been talking to a carpenter about the prices of material, and indicating that he might do some building in the spring if they were not too high. The dealer perhaps told him to bring around his bill when he got ready and he would make the prices all right for him, and before parting he might take him in the drug store and set up the cigars or the beer at the saloon, as the case might be. This sort of thing was about the extent that dealers went in drumming for trade in those days—just inquiries, at casual times, when they happened to think of it when talking to a farmer or carpenter.

I wonder if there has been a change in this respect since those "good old days" when we held an independent attitude in the matter of building and assumed that as lumber was the only material at hand they had to buy it of the lumber dealer. Everybody knew where the lumber yard was in the town, so what was the use of spending money for advertising in the paper or bothering about hunting up people to find out whether they were going to build or not? It was supposed that they knew their own minds and their own business, and it was time enough to figure their bills when they got ready to build. I wonder, too. if there are dealers who hold this same attitude in these days of rural free mail delivery, mail-order house competition and advertising of substitutes for lumber. Probably there are some who do. It is possible that a large majority of dealers to-day feel and act in this respect just about as the majority always has. Doubtless this is so, because all our training as lumber dealers has been on the supposition that lumber was the only material to build with and selling it to people when they wanted it.

Salesmanship to us old dealers was simply a matter of going for the bills after they had been made out and by "hook or crook" beating a competitor out of the sale of them. That was the big idea then in going after business. Such a thing never entered our minds as acting as a creative agent to stimulate people to want something they had not thought of, or building before, or different from what they had intended to. That idea had not been incubated then among lumbermen, nor, in fact, in any other retail business either, and yet, the idea has always been unconsciously used by successful salesmen. An old Jew clothing man since told me that the secret of selling goods was to sell people what you wanted them to buy instead of what they wanted. Most of you won't agree with that, I know. It might work in the clothing business but it is hardly workable in trying to switch off an old farmer from what he wants from a lumber pile. Nevertheless, this creative idea is being introduced in the retail lumber business by the more progressive element among the dealers. Every dealer who has adopted the Porter-Ballard plan book system is employing this idea in inducing people to change to a more imporved style of architecture and planning of their homes for greater comfort and convenience. They are using it in persuading farmers to build modern houses on their farms instead of the old style that they had intended to build. Enterprising and progressive dealers are educating the public through the use of a persistent course of advertising to a better understanding of the merits of different kinds of lumber for different purposes. They are in this way creating a demand for hardwood floors and finish and many other things which people entertained no particular desire for until the latent wish for better things had been stimulated by this creative spirit of the enterprising lumbermen. The number of this class of retailers is on the increase, though they are as yet not very numerous. It will take some years yet before the present average is materially raised to the standard of scientific selling.

### A Good Time to Begin

The present month and the next can be made the seeding time for a good deal of the year's trade, and if the lumbermen don't use measures for taking advantage of it, it is pretty certain their territory will be worked by the silent and unseen salesman who enters the home of every farmer and sows the seeds of dissatisfaction against the local lumberman and other business men of the town, and at the same time planting the seed of desire for things that the farmer and his family didn't know they wanted. Not many salesmen are calling on the lumbermen at this season of the year but on every train that stops in the town there are scores of these unseen salesmen put off in the mail sacks to appear in a few hours at a farmer's house where they are welcomed and eagerly consulted. The salesman asks them about their intentions concerning spring building and to fake out a specification of their wants, at the same time offering special inducements in the way of very low prices and the best quality of material and many other specious promises and arguments that appeal to a farmer's prejudices and imaginary ideas of the advantages in dealing direct with the producer. Every one of these catalogues, circular letters and advertisements in the farm papers is a salesman that operates through the mental influences of suggestion, inducing desire and incentive to obtain that which is set forth as an advantage to the purchaser.

There are few things that appeal to the intelligent imagination so strongly as the marvellous influence these salesmen have had in developing the business of this country. Just think, for instance, what would a mail order house be without its catalogues and its system of correspondence? Who would ever hear of it excepting those in the immediate vicinity? In fact, it wouldn't be a mail order house at all but just a common store where people come of their own volition to get what they want. What makes these great mail order concerns the success they are is because they go out after the people and go right where they live, not in person, of course, but through the medium of their catalogues and price lists, which they keep sending out as regularly as the salesman with his sample cases calls on the merchants in his territory. And the farmers have come to look for them just as you do for the salesmen you favor with your orders. And they are better acquainted with, and have a more extended knowledge of their catalogues than they have of any of the stores in town; your lumber yard included. This is a part of the new competition that has come into the retail business to make itself seriously felt within the past ten years, and it is growing more so every year. It follows, then, that the old methods of doing business must be changed to meet it and corresponding methods adopted for overcoming the influence of these silent salesmen that are the very life and support of these huge competitors of the country retail merchant. The mail order house may not sell many bills in your territory, but all the same, they exert an influence on every bill you figure for you don't know what effect the catalogue salesman has had on your customer's mind. You may try to find out but you can only guess at it. So you make your figures to conform to this conjecture and they are not as large as they would be if you knew for sure the farmer had no catalogue salesmen to consult in his studying over the matter of building. So, in this way, this form of competition is having an appreciable effect on the profits of your business.

### Had Their Own Way Long Enough

The mail order people have been having things all their own way because the country town merchants have persisted in running their business in defiance of the change that has come in the facilities of transportation and the retail business conditions in general. There is no way possible to prevent these concerns from going to the people through their silent messenger-salesmen, and so it is up to you and every other country retailer to get after them and chase them under cover. You can do it by adopting a policy and methods that are even more effectual than the catalogue and the farm paper advertisement. There is no catalogue that can stand up against the influence of the right kind of a personal talk and an intelligently conducted aggressive policy, and this means that you should meet face to face the people in your territory and cultivate a personal acquaintance with them. You have got to consider the farmers as much a part of the town community as the towns-people themselves and look after your interests with them as you do the residents of the town. The cheapening in the price of automobiles has made it possible for a dealer to make a personal call on every farmer in his locality every month or oftener during the year, and every yard should have a machine now as a part of the business outfit to compete with the sales agents of this foreign competition that visits the farmers over the rural mail routes. In this way a dealer will in time become as well acquainted with the building prospects and need of improvements in his territory as he is of the community living within the town limits. And with this information he is prepared to counteract the influence of the invisible competitor.

Along with this policy of personal visiting among the farming members of this community every dealer should take a business census of al the farmers within the radius of what he deems is his legitimate territory. He might go a little outside that, according to the circumstances governing existing conditions of local competition. This census should, as far as possible, include the financial and credit standing of every farmer on the list. As I have at other times recommended, this should be put in the form of an index card system for convenience in making notations of personal calls and the sending of circular letters, together with any specific information of a business value. It is the time of the year for planning, not only for what business may come in the old normal way, but also for the creating of a larger demand and keeping the business at home where it belongs. This is what we all think. At the same time, however, we must remember that nothing belongs to us but that which we work for and get. And in view of the outside competition in its most strenuous and insidious form, the retailers must change the character of their methods and go after the business in a systematic, scientific manner instead of waiting for it to turn up in the old haphazard way. Make this winter your seeding time and prepare for gathering the harvest. Don't go at it blindly any longer.—C. H. Ketridge, in the Mississippi Valley Lumberman.

---

The 16th annual business meeting of the Canadian Forestry Association will be held in the Carnegie Public Library, Ottawa, on Tuesday, January 19th, at 8 p.m.

# WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted—Lumber

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 7-tf

### Wanted

2,000,000 ft. White Birch Sqs. ⅞-in., 1-in., 1⅛-in., 1¼-in. up to 2-in. Lengths 2-ft., 3-ft., 4-ft. and 6-ft. Clear stock. Write M. Mitchell, Lucknow, Ont. 1 t.f.

### Birchwood Wanted

5-in. thick, 6-in. wide and up. Must be air dried 1912 cut.

LAMONTAGNE, LIMITED,
338 Notre Dame Street West,
1-3 Montreal, Que.

### Wanted To Buy
### Good Merchantable Spruce

| | |
|---|---|
| 100,000 ft. 2 x 6 | 50,000 ft. 3 x 8 |
| 100,000 ft. 2 x 8 | 50,000 ft. 2½ x 7 |
| 50,000 ft. 3 x 9 | 25,000 ft. 2½ x 6½ |

all 10 ft. and up long. Terms 75 per cent. cash against B/L; balance on arrival and inspection. Immediate shipment. State price f.o.b. shipping point. Write P. O. Box 1595, Montreal, Que.

## For Sale—Lumber

### For Sale

400 Spruce Spiles, 60 ft. long, 7 in. tops. Also any quantity Spiles 35 to 50 ft. long. Prompt shipment.

The Northern Lumber Mills, Limited,
21-t.f. North Cobalt, Ont.

### Wanted to Sell

One to five million feet of 8 x 8's to 24 x 24's, 12 ft. to 18 ft. long, No. 1 common pine timbers, rough or dressed. To be shipped as fast as cut, approximately four hundred per month.

PERRY-FRASER LUMBER CO., INC.,
23-2 Noxapater, Miss., U.S.A.

### For Sale

1 car 2 in. Rock Elm, No. 2 and 3 Common.
1 car 2¾ in., 3 in. and 3½ in. Sound Rock Elm Hearts.
1 car 2½ in., 3 in. and 3½ in. Maple, No. 2 Common.
2 cars 2 in. Maple, No. 2 Common.
1 car 2 in. Maple, No. 3 Common.
1 car 1¼ in., 1½ in. Beech, No. 2 Common and Better.
2 cars 1½ in. Beech, No. 1 Com. and Bet.
3 cars 1½ in. Beech, No. 2 Com. and Bet.
30,000 Cedar Posts, 8 ft. long.
1,000 cord 4 ft. Hardwood Slabs.

This stock is dry and in good shipping condition.

WM. PEDWELL, Lumber Merchant,
15-t.f. Owen Sound, Ont.

### We Can Cut To Order

Spruce or White Pine Timber up to 12 x 12. Inquiries solicited.

H. C. DUNBAR,
1 t.f. Haileybury, Ont.

### Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

## For Sale—Machinery

WOODWORKING MACHINERY FOR SALE: 2 24-in. planers and matchers; 4 12-in. buzz planers; 1 No. 51 Crescent universal woodworker; 2 10-in. four side moulders; 1 Cowan hollow-chisel mortiser; 2 Canada Machinery Corporation dimension saw tables; 1 42-in. power feed band rip saw; 1 54-in. band resaw; 6 30-in. Ideal pedestal bandsaws; 1 No. 503 tenon machine, double heads and copes. H. W. PETRIE, Limited, Toronto.

### Rebuilt Veneer Machines

We have the following rebuilt Coe veneer lathes and clippers ready for immediate shipment:

Lathe, 50-in. swing, 88-in. knife, 6-in. spindles.
Lathe, 50-in. swing, 64-in. knife, 6-in. spindles.
Lathe, 50-in. swing, 64-in. knife, 5-in. spindles.
Lathe, 50-in. swing, 76-in. knife, 6-in. spindles.
Lathe, 42-in. swing, 52-in. knife, 5-in. spindles.
100-in. power clipper.
64-in. foot power clipper.

These machines are decided bargains and carry the same guarantee as we give our new ones. Prices on application.

THE COE MANUFACTURING COMPANY,
23t.f. Painesville, Ohio.

## Wanted—Employees

**Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents**

Wanted—First class mill superintendent to have entire charge of operation of spruce mill, capacity eight to nine million feet per year, located at Charlton, Ontario. Write, giving experience, wages desired and full particulars, to Smith, Fassett & Company, North Tonawanda, N. Y. 2

## Wanted—Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

Plaining mill foreman desires position. Twenty-five years' experience in sash and doors, interior fittings, veneer and stair work. Box 127, Canada Lumberman, Toronto. 2

BAND-SAW FILER wants position. Thoroughly experienced. Last employers not operating this year. Desirous of getting located permanently. Married. Age 33. Also good on circulars and machine repair. Can furnish A1 references. Box 124, Canada Lumberman, Toronto. 1-2

### Manager or Secretary-Treasurer

Position wanted by married man. Fifteen years' experience in every department of the lumber business. Successful manager of company manufacturing thirty million feet annually. Four years in wholesale and retail business as secretary and manager. Licensed log scaler. Can provide capital and furnish excellent references. Reply to Box 112, Canada Lumberman, Toronto. 24-3

Band Saw Filer open for position. Used to cutting hard or soft wood in saw mill or factory. Box 124, Canada Lumberman, Toronto. 2-5

Planing mill man expert in sales, advertising and estimates, with exceptional record for increased business and profits, will be open for new position January 1st. Will guarantee results for 1915 and will make pay contingent upon results. Apply Box 108, Canada Lumberman & Woodworker, Toronto. 23-2

## Business Chances

### Pulpwood Limit For Sale

A fine freehold virgin pulpwood limit for sale. Easy operation, rivers running to railway. For further information write to Box 122, Canada Lumberman, Toronto. 1 t.f.

### In the Supreme Court of Ontario

In the Matter of The Winding-Up Act, being Chapter 144 fo the Revised Statutes of Canada and Amending Acts.

And in the Matter of the Dominion Lumber Company, Limited.

Judicial Sale by Public Auction of valuable timber lands, limits and mills situate in the Province of Quebec.

Notice is hereby given that pursuant to the Winding-Up Order made in this matter and bearing date the 9th day of June, 1914, there will be offered for sale with the approbation of Geo. O. Alcorn, Master in Ordinary of the said Court and with the concurrence of the Royal Trust Company, Trustee for bondholders, by Public Auction by Fraser Bros., Auctioneers, at No. 453 St. James Street, Montreal, Quebec, at the hour of 10.30 o'clock in the forenoon on the 30th day of January, A.D. 1915, the following lands and premises and assets in one parcel:—

A.—In the seigniory of Ste. Anne des Monts, in the County of Gaspe, in the Province of Quebec, 1,000 acres more or less of timber lands, together with a duly equipped lumber and shingle mill, having a capacity of 25,000 feet of lumber and 125,000 to 150,000 pieces of shingles every ten hours, also dwellings, storehouses, repair shops, etc., also 289 square miles timber limits in said county held under Government license and numbered 22 to 29, estimated to contain over 350 million feet of saw logs, principally fir, spruce and cedar, and 595,000 cords of spool and pulp wood. Also logs in river estimated at 1,000,000 feet board measure.

B.—Near La Grande Vallee des Monts, in the County of Gaspe, in the Province of Quebec, 54 square miles of timber lands and 100 square miles licensed timber limits (held under Government license and numbered 30, 34 and 35) reported to contain 100 million feet of saw logs and 245,000 cords pulp and spool wood, together with new lumber mill fully equipped and having a capacity of 50,000 to 75,000 feet of lumber every ten hours, also a mill for sawing shingles and railway ties, with a capacity of 125,000 to 150,000 shingles every ten hours and all necessary shanty plant, etc.

The property will be offered for sale subject to a reserved bid fixed by the said Master in Ordinary.

**Terms of Sale.**—Accepted cheque for $10,000 payable to the Liquidators to be deposited with the Auctioneer by each bidder when making bid. Twenty-five per cent. of purchase price to be paid in cash and balance shall be paid in three equal annual instalments and shall bear interest at the rate of seven per centum per annum, such instalments to be secured to the satisfaction of the Liquidators.

The Purchaser may at his option pay the whole purchase money in cash.

The terms and conditions of sale in all other respects are the standing conditions of sale of the Court so far as applicable.

For further particulars apply to Archibald W. Stevenson, Eastern Townships Bank Building, Montreal, Quebec, Charles A. Millener, Deseronto, Ontario, Frank Denton, K.C., 20 King Street East, Toronto. Liquidators or to Masten, Starr and Spence, 58 Canada Life Building, Toronto, Canada.

Dated at Toronto this 14th day of November, A.D. 1914.

GEO. O. ALCORN,
23-2 Master in Ordinary.

### Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

### Sawmill For Sale

Rare bargain. Big opportunity to go into the sawmill and store business in a small way. Sawmill, store, dwelling, stables and four acres of land, situated five miles from Southampton on the main road leading to Owen Sound. Capacity of mill, 10 to 12 M. feet per ten hours. In first class condition. Good supply of logs can be had for a number of years. Home market in Southampton for all the lumber, slabs and sawdust. For further information apply to J. Seibert, Southampton, Ont. 1-2

## Miscellaneous

### Wanted

6,000 ft. wrought or cast iron pipe, 3-in. to 6-in. desirable. Quote best prices. Edwards & McLeans, Bonaventure, Que. 2

### Saw Mill Wanted

Wanted to purchase a saw mill in good order, capacity about 75,000 ft. per 10 hours. Party buying desires to move mill. Apply Bartram Bros., Limited, Ottawa, Ont. 1 t.f.

### Agents Wanted

Large United States firm manufacturing steel wheels, farm trucks, handy wagons, logging and traction wagons, dump carts, engine trucks, etc., wants Provincial agents throughout Canada. Write stating what territory you can cover. Box 119, Canada Lumberman, Toronto. 1-3

### Wanted To Purchase

200 to 300 boom chains, ½ inch thick and nine feet long, with toggles and rings attached. Name best price for cash f.o.b. cars shipping point.

MONTEITH BROTHERS,
1-4 Rosseau, Muskoka, Ont.

### Wanted

Company with small mill and lath machine to take contract of sawing from one million to one million and a half feet of lumber during the summer of 1915. Apply Herron Brothers, Limited, 312 McKinnon Building, Toronto. 2

### Agents Wanted

One of the largest firms on the Continent making motor trucks, wants sales agents for whole or part of Canada. Putting out a truck which represents one of the most important advances in truck manufacture. It drives from all four wheels and likewise steers and brakes on all four wheels. Company very strong financially. Box 120, Canada Lumberman, Toronto. 1-3

### Rossed Pulp Wood

I will close a contract immediately for machine Rossed Pulp Wood, 24-in. and 48-in. long, quotations f.o.b. Cochrane, Ont., or at place of delivery. I have the control of a large quantity of pulp wood yearly.

I also have for sale 50,000 ft. of 1-in. dry White Birch.

L. BOIVIN,
23-2 Box 46, Cochrane, Ont.

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

**Saw Mill Machinery For Sale**

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

## The Woodworking Crafts and War

From the first wooden club to the present-day weapons is a long stride. Frontier log houses were pioneer protection. Dugout canoes preceded the era when as we are told by tradition the warriors of Greece went forth on the wooden Argo in search of the golden fleece.

Troy was captured by the aid of that mammoth wooden horse that held a daring group of Grecian invaders. Chariots, battering rams, scaling ladders, catapults, slings, gateways, portcullis, drawbridges, and other ingenious contrivances of the ancients tell on antique parchment and on many monuments of stone the part contributed by the woodworker to the art of war. McCurdy says that of operations in the field the famous example of Caesar's bridge over the Rhine—completed in nine days—will stand as one of the greatest of feats.

In modern times we have pontoon bridges, timbering for trenches, and the making of temporary and other bridges to replace those destroyed by assault of arms. Repairs and renewals of wheels and wagons are continuously demanded in wood. Huts and sheds, as well as their fittings for camps and hospitals, the making of wagons and cases for the transportation of supplies, all these and similar wants call upon the woodworking craftsman. Aeroplanes are largely of wood, walnut and other choice materials being used freely in their construction.

Even battleships are not free of this very convenient means of construction, their armor being bolted on to a stout backing of heavy timber, frequently teak.—Wood Craft.

## Arranging and Installing Machinery

It takes a lot of time to install machinery by the "cut-and-try" method, especially belted machinery, says W. F. W. in the Woodworker. I have tried it in close quarters, and invariably, after the machines are successfully located so they will at least "run," I have been all tired out. It is a foolish way to accomplish such work.

The best way I know of for rearranging present machinery and installing new is as follows: Make a plan on paper, to scale, showing all obstacles that are not to be moved, also showing all lineshafting, pulleys and bearings. Then make plan drawings of all machinery to be moved and installed, on a separate sheet of paper, to the same scale as the first. Also, make plan drawings of countershafts and pulleys that must go in. Cut out the latter drawings with a pair of shears, right up to the outlines and place them on the first plan drawing—the drawing of the entire shop. You can thus move the machines around beforehand as though they were checkers; can move a monstrous machine in a second. All interferences may be readily observed with the eye, and the best possible arrangement is effected in the simplest and most time-saving manner.

This method is even better than the method of immediately "drawing-in" all machines in lead pencil on a single sheet of paper. The lead lines can be easily erased, true enough, but even the erasing is unnecessary where the separate machine drawings are movable.

After corerctly locating the machines on paper, paste the separate machine drawings in their respective places on the large plan, which can then be intelligently followed in the actual installation. The most important point is, make all drawings accurately and to the same scale.

## Working Ground-off Saw

I use a ground-off saw for cutting thin strips about 3-16 in. by 3 ins. The saw is ground 21 gauge, and when I work it on the flat part of the bench the boards do not come out even in thickness. I am told that if I work the top of the saw, it will cut truer and better. Is this so? If so, why is it?—(M. E. O.)

Answer.—Working a ground-off on the bench will cause it to run out if excessive feed is used, especially if the saw is ground very thin. Whoever told you about working the top of the saw is correct, as working it there will cause the boards to come off more even in thickness than when working at the bottom of the saw. Naturally, you will not get such good cutting angles on the teeth when using the top of the saw, so the saw will not cut so freely. This again is compensated in a slight degree by using the thinnest part of the saw. The reason why a saw will cut straighter at the top than at the bottom is, it is more of a shearing than a direct cut. Put a piece you have to saw near the top of the saw and you will find that 3 ins. of the saw will tend to keep the cut a straight one, whereas if you work it on the bench, only about ½ in. of the saw will be making a shearing cut. That is the reason why you can depend on the boards being of uniform thickness when working the top of the saw. The same principle occurs when you work a saw just a trifle larger than the wood you are sawing. One quarter of the saw is cutting, while, when you use a large saw and only cut small stuff, only a small section of the saw is cutting. The quarter part of the small saw tends to keep the cut straight, while the small section of the large saw allows the cut to be of varying thickness. With swage saws this is very noticeable, the best work being done with saws just a trifle larger than the wood to be sawn.—The Timber News.

## New Type of Lumber Vessel

Two American gentlemen, both of Portland, Ore., have obtained an American patent on plans for a new type of vessel for service in the coastwise lumber trade. The vessel can be loaded with 5,000,000 sup. ft. of lumber in an hour, it is said, and complete the round trip between Portland and San Francisco in seven days, including the time required in taking on and discharging her cargo. The plans prepared show it to be in the nature of a "dry-dock" steamship. It is to be built in such manner that it can be submerged to a sufficient depth to permit two sets of barges loaded with lumber to be floated into the hull through bow gates. Five of these barges can be placed in compartments on each side, each of the ten loaded with 500,000 ft. of lumber. After the gates have been closed and all the water used for submerging pumped out, the cargo deck will be above them. The operation for discharging the cargo consists of flooding the central lower portion of the hull with water until the vessel sinks and the bow gates have been thrown open, allowing the barges to float out. There will be extra barges, making it possible for 10 to be loaded at leisure in port while the vessel is en route down the coast, carrying her capacity. It is expected that the system will prevent congestion of lumber on the docks. The barges are open and can be filled direct from the saws and planers. The vessel is 650 ft. long, with 80 ft. beam, while each of the barges is 100 ft. long, with 30 ft. beam. For the return trip from San Francisco it is said the barges will be loaded with fuel oil, asphalte, cement, and different kinds of general freight.

## Army Tent Pegs

The demand for army tent pegs has been enormously increased in Europe by the calling out of some 20,000,000 soldiers, many of whom are housed in tents. These pegs are made of ash, and are octagonal in section, being about two inches long. A stout wrought-iron band is run around the head to save splitting, and a wedge-shaped point of similar metal is rivetted on at the business end—a circular hole is drilled through the side of the peg, and the article is completed. It is not reported that orders for any of these pegs have come to America, but there is no reason why some of the excellent and abundant ash on this side of the sea might not find a market on the tented fields of Europe.

# Review of Current Trade Conditions

### Ontario

Reports received from many lumber manufacturers in Ontario, while varying in regard to the prospects for the coming season, agree pretty generally that there is much less reason for feeling disappointed with present trade conditions than there appeared to be a short time ago. The remark is frequently made that stocks in the hands of factories and other large consumers are uniformly low and that, although the volume of trade to-day is not large, it is likely to increase in the near future when factories and large consumers commence to clear out their stocks. One manufacturer who studies trade conditions closely states that he is looking for a moderate volume of trade during the continuance of the war. An interesting point is brought out by a number of Ontario manufacturers who state that, as they have found a smaller demand in Ontario of late, they have devoted more attention to the United States markets and have been able to sell more stock there than for some time previous. The opinion of one of the largest manufacturers in the Georgian Bay district in regard to the outlook is that improvement may be expected both in the United States and England if the war is over by spring. Otherwise this manufacturer does not expect better trade conditions. A large northern Ontario firm of lumber manufacturers state that sales have been better during the past month and that they have received more numerous enquiries, but that buyers are looking for a cut in prices. These manufacturers look for improved trade conditions in the spring. The output of logs in Ontario this winter is certain to show a great decrease as compared with previous winters, according to a large number of reports which we have received, and in which the percentage of decrease varies all the way from 15 to 90 per cent.

Ottawa lumbermen are looking forward hopefully to the year 1915 and it is currently reported that something will be done in the way of developing a campaign for improving trade conditions in the lumber business. Present indications are that this will take the form of a carefully planned advertising campaign. Fine winter weather was of much assistance in woods operations during the early part of January, furnishing goods roads for hauling logs through the rivers and lakes.

### United States

In spite of the many distressing developments of the last half of the year 1914, lumbermen in the United States are entering the present year with a feeling of more confidence than would have been expected a few months ago. During the last month or two many favorable developments have occurred, all of a rather slight nature, but combining to indicate that a steady and gradual improvement may be expected. Possibly one of the most important factors in this connection is the manner in which the Interstate Commerce Commission has changed its attitude towards railway companies, granting them the five per cent. increase which they applied for many months ago. It is considered certain, in all quarters, that this will result in the railroads buying more lumber. Already enquiries have been put out by the railway companies for many millions of feet of material and orders are expected to result in a number of cases on account of the necessity for repairs and new equipment. On top of the railroad demand it is likely that the spring will see an extensive renewal of building operations, as money is now fairly abundant. In addition to the railroad building situation there is the attitude of the government towards large corporations, which promises to be a factor in the direction of improvement in trade conditions. Many indications, and several recent events point to the fact that large corporations will be less disturbed in their legitimate business operations during the present year than they have been for some years past, which will certainly be a relief to them and will enable them to devote much more of their time and resources to the improvement of trade conditions.

The lumber trade commenced the year 1915 under decidedly advantageous conditions. Stocks are not excessive at any point, either with consumers, yard dealers, or mills. Consumption has not been equal to the output during the past year, but recent curtailment at the mills has brought mill stocks to a good level which is not unlikely to result in a strengthening of prices as soon as a fairly brisk demand develops. Just at present however, on account of the irregularity of prices no one is looking for any extensive stocking up on the part of dealers.

The yellow pine situation is a little better at the opening of the year than it was a few months ago. Although the holiday trade was small, the situation at the mills has improved and the outlook for a better demand from the railroads and from factories is fairly promising. Competition is likely to continue on an active basis, but the extensive curtailment at the mills is already having a beneficial effect. One of the most encouraging features of the yellow pine trade and also of the trade in Pacific Coast woods is the definite assurance that overproduction can now be left out of the question as a depressing factor. Curtailment is being practiced throughout both the south and the Pacific Coast. It is believed that Pacific Coast conditions are improving as a result of this policy. The foreign trade is already more promising than it was last fall. A large enquiry recently arrived for 20,000,000 feet of railroad ties to be used in English railroads. High freight rates have restricted the English buying, but as soon as rates become more settled the volume of business is expected to increase. Lumber manufacturers are counting upon an improvement in the railroad demand on account of the increased freight rates which have been permitted.

The northern pine trade in the northwest has been halted considerably by cold weather. There are good expectations however, for a good demand for all grades of white and Norway pine by the end of January, as yard stocks are known to be light in most quarters. Hemlock prices continue unsatisfactory, on account chiefly of the competition of other low priced stocks.

### Great Britain

The lumber trade at London, in spite of the fact that prices are very high, and large quantities of stock are going into consumption for abnormal purposes, is quite active in connection with ordinary building operations. This was not expected a few months ago. It is quite clear, however, that there is a fair amount of building in progress and that high prices and other influences have not reduced the building activity to any great extent. Important contractors report that they have plenty of building work on hand, which is proceeding as though nothing out of the ordinary were happening. The box and case making trades are also busy. On the whole, therefore, the timber trade is enjoying an active demand. Profits, however, are not as great as one might think when considering the present high prices, for the trade is working very largely on newly acquired stock, the cost of importing which has been very high. Deliveries at London docks during the week ending December 19th amounted to 9,000 standards and total deliveries for the year to that date exceeded those of the corresponding period of 1913 by 23,740 standards. Importers, however, expect for some time to be kept rather anxious about supplies. If the consumption continues at about the present level, steady arrivals of stock will be necessary throughout the winter.

During the holiday season at Liverpool there was a much less noticeable lull in trade than usual. Sales kept up remarkably well. Arrivals of large lines were reported which went direct into consumption. The prospects for yard stocks are especially good. In regard to forward buying much depends upon the individual point of view. Those who have been buying in this manner for the past few months have not had anything to regret. Shippers' prices are still very high and look as if they will continue so under present transport conditions. Some business, however, is being transacted satisfactorily. Improvement is looked for in the hardwood situation at Liverpool early this year, interesting enquiries having been fairly numerous. Liverpool merchants are rather interested in the prospective revival of the wooden toy industry in Great Britain, expecting that it will provide a valuable outlet for the cheaper kinds of hardwoods.

Soft woods have been quiet at Liverpool. This time of year is ordinarily a quiet one for the Canadian pine deal trade at that port. The Volume of trade, however, is quite up to the average of previous years. It is possible that a little improvement in this trade can be counted upon early in the present year. The Liverpool demand for spruce deals continues brisk, chiefly for the construction of camps in many parts of Great Britain. Stocks of suitable sizes are nearly drained out. Tonnage for spruce deals from Canada is scarce. At Manchester, spruce deals continue to make records. Large parcels of 5-in. and 3-in. have changed hands at £13 15s per standard and 8-in. and 9-in. x 3-in. are almost cleared up. The Timber Trades Journal in a recent issue publishes the following spruce values ex stocks at Manchester:—

| | | | |
|---|---|---|---|
| 3-in. x 4-in. to 6-in. | £13 15s. | to | £14 |
| 3-in. x 7-in. | £14 | to | £14 15s. |
| 3-in. x 8-in. | £14 10s. | to | £15 |
| 3-in. x 9-in. | £15 | to | £15 10s. |
| 3-in. x 11-in. | £16 | to | £16 10s. |

At Glasgow the consumption of spruce continues good and prices are firmly maintained. Canadian yellow pine deals and sidings are steady.

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

### Ottawa Trade Quiet—Logging Conditions Good

Ottawa, January 7 (Special to the Canada Lumberman): Though business in the lumber trade is not very encouraging just now there is a movement on foot amongst the lumbermen of Ottawa and district to make every effort to make business even "better than usual" during 1915 in spite of the war. Just what methods will be adopted is yet to be determined, but it is likely a carefully planned advertising campaign will be one of the features.

The continued frost and heavy falls of snow, prior to yesterday when a rapid thaw began, have helped operations in the camps and logs are being hauled over good roads to the rivers and lakes. J. R. Booth has commenced to ship logs from his Madawaska camps by rail to Ottawa. By the first of April he hopes to have his big new timber mill ready for operation. The finishing touches are being put on by a large staff of men.

After closing down for two weeks in order to make repairs to the machinery and take stock, the factory of the Estate James Davidson will re-open on Monday, which will mean the return of the 175 employees.

It remained for some of the leading lumbermen of Ottawa to settle, for the next 10 or 15 years at least, the water question which has been such a contentious one for the past four or five years. Just before the municipal election campaign was launched three weeks ago, a committee of prominent citizens and large property owners, of which Senator W. C. Edwards, of the W. C. Edwards Company, was chairman, other members being Sir Henry Egan, Gordon C. Edwards, C. Jackson Booth and Mr. J. B. McRae, hydraulic engineer for the power users on the Ottawa river, made a report on what was considered would prove the best means of obtaining a supply of water for several years to come. This report has been unanimously adopted by the board of trade and by the rank and file of both factions in the dispute. The committee recommended that the supply be drawn from the Ottawa river by an overland pipe from Lemieux Island, with mains and pumps installed large enough to meet the needs of the city for the next 15 years. In the meantime all the necessary data in connection with other supplies that have been suggested can be thoroughly investigated. The new mayor, Mr. Nelson D. Porter, has pledged himself to carry out what the committee recommends without delay. This is important to lumbermen since the insurance rates were advanced about two months ago from 25 to 50 per cent. owing to the unsatisfactory state of the water facilities for fire pressure.

With the going into effect of the new Act, which forbids the use of phosphorous in the manufacture of matches, the E. B. Eddy Company has been put to considerable inconvenience. The Act became operative on January 1st. The inconvenience is caused by the difficulty in obtaining good substitutes.

Lumbermen are watching with interest the progress of the dispute between 14,000 employees of the Grand Trunk Railway and the company. The men have been notified that on April 1st it is proposed to cut wages based on the financial returns of the company for the last six months of last year. The men have replied that they will fight any attempt of this kind to the end. An appeal for a board of conciliation is to be made to the labor department.

### Montreal Trade Conditions—Building Very Quiet

Montreal, January 8th (Special to the Canada Lumberman): There is little to report in the lumber trade. Building is practically dead, and is not likely to recommence for another month at least. There are also indications that when the season opens there will be trouble with some of the union men, who strongly object to a new and reduced standard of wages adopted by the Builders' Exchange with a view of inducing capitalists to invest money in building projects. It is admitted that lower wages have been for some time ruling in practically all branches, and one object of the Builders' Exchange is to establish a uniform basis on which contractors may estimate their bids.

Reports from the local yards are to the effect that very small quantities of stock are being sold.

The unsatisfactory condition of the building business is illustrated by the latest figures issued by the City Hall building inspector, Mr. Chausse, who states that the war is responsible for the heavy decline in permits. For December the permits were valued at $361,135, as against $1,308.230 in the corresponding month of the previous year. The total for 1914 was $17,638,446, compared with $27,037,297 in 1913.

Several wholesalers have received enquiries from furniture makers for large quantities of birch, but only a limited amount is available.

Both in the pulp and paper markets, business is less active. Ground wood is in fairly good demand, but sulphite and newsprint have fallen off. There are, however, indications that with more briskness in United States commerce the sections referred to will pick up considerably in the near future.

### New Brunswick Trade in Good Shape

In the course of an address before the Amherst, N.S., "Maritime Forward Conference" recently, Mr. W. B. Snowball, of Chatham, N.B., said:—"At the present time the lumber business in the Maritime Provinces stands in possibly the best position of any industry in Canada." Mr. Snowball uttered a note of warning, however, and expressed the hope that the lumbermen would guard this position by not making too large a production. He pointed out how very greatly the export of lumber from New Brunswick and Nova Scotia has fallen off, and showed that this was due to a depletion of the forests, and that the time had come for a wise policy of conservation, so that our forests might remain a permanent source of revenue. The province of New Brunswick in 1880 exported 438,000,000 sup. feet of lumber to the United Kingdom and Continent; but in 1913 the export was only 271,000,000 feet. Mr. Snowball's warning, therefore, is timely, for prices were very much higher in 1913 than in 1880. With regard to the present situation lumber is bringing very high prices, and Mr. Snowball himself recently sold 30,000,000 feet for next year's delivery at better prices than those of 1914. The British lumber market is now lightly stocked and only the scarcity of tonnage and the high freights stand in the way of large shipments. The United States market for spruce has lately shown a little improvement, but is still very dull, the shipments from St. John during the month of November being less than half as large as in November, 1913. The log cut in New Brunswick this winter will undoubtedly be larger than that of last winter.

### Spruce Still Firm at Boston

The demand for spruce lumber at Boston is light, but receipts are also light and prices are firm. Although the base quotation for frames is $25, even better offers are reported as having been refused because of manufacturers having orders considerably ahead of the saws. For quick delivery, some retailers have recently had to pay $25. Desirable sizes of random are becoming more scarce and prices are stiffening. At New York, the trade in eastern spruce is dull. Improvement is expected in February, as enquiries for February delivery are already being received. Retail and factory stocks are light, and a very light increase in consumption would improve the volume of buying. Recent quotations for 1-in. firsts and seconds at Boston are about as follows:—Brown ash, $61 to $64; basswood, $43 to $45; red birch, $54 to $56; maple, $39 to $41; plain oak, $85 to $90. Shingles continue in an unsettled condition at Boston. The demand is poor and there is strong competition among sellers. The best quotation for white cedar extras is $3.45 with some business down to $3.35. Clears are bringing $3.80 to $3.90 and second clears $3.50 to $3.65. Best red cedars are quoted up to $3 60, but sales are ranging from $3.40 to $3.50. There is a fair demand for lath and offerings are light. Quotations for 1⅝-in. are from $4.15 to $4.25, and for 1½-in. $3.70 to $3.80.

A prominent firm of Boston wholesale lumbermen report that the market for high grade white pine is weak. Spruce is fairly firm, but very little activity is reported. Vermont matched spruce boards are becoming scarce. Slightly higher prices are reported for N. C. roofers.

### Gillies Bros. Get Interchange Tracks

Judgment in favor of Gillies Bros., lumbermen of Braeside, Ont., was given by the Railway Commission last week in the application for the construction of interchange tracks of the Canadian Pacific and the Grand Trunk at the Braeside plant. In granting the application Chief Commissioner Drayton said this was the first case of its kind that had come before the Board, but as the applicants ship about 2,000 cars of lumber per year it would be in the best interests of all concerned to grant the facility, the cost to be divided between Gillies Bros. and the Grand Trunk.

A Vancouver report announces the recent death of Mr. Robert Babcock, a well-known timber lands broker of that city.

# Getting Acquainted

Is somewhat of a problem, at times, occasionally decidedly unpleasant You have probably found it so in both your buying and selling experience.

Why take a chance of having your pride, feelings or temper ruffled—stick close to your old friends, not quite the excitement may-be, but there's that peace of mind, that satisfaction in knowing that they can be depended upon.

There is no more dependable place on earth to get your Dressed Spruce, than Fenderson's—the value is in it—beautifully dressed—excellent grade—bone dry—you can bank on its being good when you place the order.

If you would help your business grow, handle better stock than the other fellow, your customers talk it over, if pleased, they build your business—if not pleased, they tear it down. Be jealously careful of your strongest advertising medium.

## Remember

The most value for every dollar.

Each car chuck full of satisfaction.

Make that next car a Fenderson car.

You'll like it.

THEIR ORIGIN, VALUE AND USE—COMMENT AND VIEWS ON AN IMPORTANT BRANCH OF THE TRADE.

## Some New Kiln-Drying Thoughts

By Henry Hunter

It is not my intention to discuss any theoretical drying system. We are interested in what can be done and has been done rather than what might be done. With this idea in view, what I have to say is based upon observations made under ordinary factory conditions and actual tests made under these same conditions. I shall take up briefly the troubles resulting from improper drying, with their causes and the conditions which produce them, following this with a brief description of the conditions under which successful drying can be accomplished and these troubles eliminated. I will incorporate in this discussion the results of a series of tests made under the conditions which I shall describe and which will illustrate better than any argument what is possible under correct drying conditions.

The troubles resulting from improper drying, which affect the panel manufacturers and a part of which are common to all manufacturers of wood products, are blistering of veneer, veneer shrinkage, opening of joints, warping, case-hardening, honeycombing and checking. As you all know, case-hardening, honeycombing and checking result from excessive heat or lack of moisture or from both, the surface drying first and preventing the escape of moisture from the centre of the stock. The other troubles are caused by under drying. I do not intend to convey the idea here that improper drying is always the cause of all these difficulties. A part of them may, at times, be caused by other things regardless of how the product is dried. But I do say that where the stock has not been properly dried some of these troubles will result.

Unsuccessful drying is the result of improper conditions as to heat, humidity and circulation in the drying chamber. These conditions may be all or some one or more of the following: insufficient humidity, insufficient circulation, excessive heat, lack of uniformity as to heat, humidity and circulation in all parts of the kiln, and the variation of these conditions from time to time during the drying period. While it is perhaps not possible to dry each individual piece of wood in the same degree, it is certainly true that approximate uniformity can be attained only where the conditions are uniform throughout the drying chamber. The temperature cannot be permitted to vary. Likewise the amount of moisture must be uniform throughout the room. There must be a continuous and rapid supply of fresh air to all parts of the kiln and the prompt removal of the air after it has been used. The problem, therefore, is first to produce these conditions, and second, to control them once they are produced. To produce the conditions as to heat and humidity, it has been found best to heat the air to the desired temperature and humidify it to the proper degree before it is permitted to enter the drying chamber. This, of course, cannot be done where the radiation is inside the drying room proper. There are additional objections to having the radiation in close proximity to the drying product. The best results in rapid and uniform circulation can be obtained, I believe, by having both the intake for fresh air and the outtake for impure air on the floor line. In this way the warm air rises rapidly and passes to all parts of the room, while the cooler impure air sinks to the floor line and is removed. This insures a constant and ever changing supply of fresh air, heated and humidified to the proper degree, and brings it continuously into contact with the work to be dried. The control of circulation as well as that of heat and humidity should be taken care of automatically.

I desire at this point to emphasize the importance of humidity in any drying system and that there must be some provision made for producing and controlling it. The amount of moisture naturally in the air is uncertain, varying with the outside conditions, and cannot be depended upon. There must be some method for producing it, but any arrangement which provides for it without accurate control and regulation will not produce results. Moisture in the drying air is responsible for the open pore and no wood product can be successfully dried without it. Without an open pore, the centre of the stock cannot be properly dried while the outside case-hardens and honeycombing sometimes results. On the other hand, stock dried with open pore can be more easily worked and presents a better surface for the adhesion of glue. Veneer and cut-stock will be more pliable, flatter, and will have good color. The stock can also be worked in less time, with less waste and less expense.

With the drying conditions regulated and controlled as already indicated, lumber can be best dried at a temperature of 140 degrees F., with the humidity held at 57 to 63 degrees. In drying panels, the temperature should not be so high, 120 degrees being the limit.

The following results were obtained from the tests made in a factory which was having most of the troubles above enumerated. They were obtained under the conditions described as being essential to proper drying. The first test was upon a number of panels taken from the glue room. The first moisture test on the core stock showed a variation in moisture content of from 3 to 14 per cent. The first moisture test on the veneer and cross banding showed from 6.7 to 8 per cent. of moisture. After being re-dried under the above described conditions for fifteen hours, the core stock showed a variation of from 3.5 to 4.5 per cent. in moisture and the cross banding and veneer showed from 2.9 to 5 per cent. After the panels were laid, they weighed 65 pounds 4 ounces. After being dried for 22 hours, at 120 degrees, the weight was 63 pounds 8 ½ounces, a loss of 1 pound 11½ ounces or an average loss to the panel of 3.4 ounces. After the panels were dried, they showed a moisture content of from 4.7 to 6.7 per cent., an average of 5.75 per cent.

A test of twenty oak boards taken from the tempering shed to be used as core stock, showed a moisture content ranging from 2.9 to 19.4 per cent. Eighteen maple boards taken at the same time, showed a variation of from 3 per cent. to 6.7 per cent. moisture content. These boards were taken from the same piles at the same time and had all been kiln-dried. After being re-dried for thirty-six hours at 140 degrees, the oak showed a variation in moisture content of from 2 to 3.8 per cent., an average of 2.7 per cent. The maple boards showed a variation of from 1 per cent. to 3.6 per cent., an average of 1.6 per cent. This stock was worked up into six 5-ply oak panels, size 18 x 33, and six 5-ply mahogany panels of the same size. After being laid, the oak weighed 57 pounds 4½ ounces and the mahogany 52 pounds 15½ ounces. After drying, the oak weighed 55 pounds 4 ounces and the mahogany 50 pounds 13½ ounces. The loss of moisture on the oak was 2 pounds ½ ounce, an average of 5.4 ounces to the piece. On the mahogany, the loss was 2 pounds 2 ounces or an average of 5.6 ounces to the piece. The moisture content in the oak after drying was 7 per cent., in the mahogany, 7.1 per cent.

These results speak for themselves. The variation of the moisture content of stock dried under improper conditions, and the uniformity of the same when dried under correct conditions is apparent. The danger of having part of the work come through in good condition, and a part of it go wrong, is eliminated. It makes your drying system certain and dependable. There is no more reason for guess work in your drying than in any other department of your factory. Create the proper drying conditions and control them. Pile your stock properly, so as to prevent the forming of pockets, and the obstruction of circulation. Test your stock for moisture content before placing it in the kiln. Treat it accordingly and test it before removing. Learn your factory conditions. Do not expect your stock to remain dry after leaving the kiln when your shop conditions are wrong. With correct factory conditions and the application of the above described principles in your drying department, your drying troubles will be greatly lessened, if not entirely eliminated.

---

## A Timely Piece of Good Advice

The Fred S. Morse Lumber Company, Springfield, Mass., have sent an attractive Christmas card to their trade friends. As usual with this company, its souvenir this year contains a few paragraphs of timely philosophical advice such as the following:—"Let me do my work each day; and if the darkened hours of despair overcome me, may I not forget the strength that comforted me in the desolation of other times. May I still remember the bright hours that found me walking over the silent hills of my childhood, or dreaming on the margin of the quiet river, when a Light glowed within me, and I promised my early God to have courage amid the tempests of the changing years."

---

The Dominion Pulp Company, Limited, Chatham, N.B., are installing an induced-draft system to furnish draft for their entire plant. The apparatus has been manufactured by the B. F. Sturtevant Company of Canada, Limited, Galt, Ont.

---

There were 400 fires last year on the national forests of Utah, Southern Idaho, Western Wyoming, and Neveda, or 15 more than in the most disastrous season of 1910. Yet the cost of extinguishing them was only one-third and the damage only one-thirtieth of that of the earlier year. The difference is due to better organization now, and to more roads, trails, and telephones.

## Annual Meeting of Montreal Lumber Association

Several important matters affecting the trade were brought before the notice of the members of the Montreal Lumber Association, at the annual meeting held recently at the Board of Trade. Mr. Arthur H. Campbell, president, was in the chair.

The report of the president alluded to the steps taken by the Council of the Board of Trade to secure direct railway connection between Montreal and the Transcontinental Railway. The Council had asked the Government to secure legislation providing for the construction of a branch line affording the required facilities. The Government had apparently taken no action, and the conditions resulting from the war, in the last few months, made it inadvisable to add to the labours of the Government at the moment by pressing the question still further upon its attention.

The question of allowances from track scale weights was also commented upon in the report. The position at the present time is that the railways propose to cancel the present allowance of 500 lbs. on lumber in box cars, and the allowance on flat cars of 1,000 lbs. in the winter, and 500 lbs. in the summer, and on wet wood pulp 1,000 lbs., when ascertaining the allowance of 500 lbs. for stake fastenings, but providing that weighmen will make such allowance as they estimate to cover the weight of accumulated ice, snow, or refuse in and around the car at the time of weighing. The proposed cancellation of the allowance on wet wood pulp was argued before the Railway Commission on March 18, 1913; the railways supplied the Commission with additional information on November 2nd, and the matter now awaits the action of the Commissioners.

The whole question of demurrage, including the proposed reciprocal and average systems, also awaits the ruling of the Railway Commissioners.

On the subject of the regulations governing the stop-over arrangements on lumber destined to United States points, the committee represented to the carriers that the stop-over arrangement on lumber destined to United States points should be when lumber was piled in the yard for sorting for the period of twelve months on lumber consigned to the United States for domestic consumption or for export, and the railways had met this request and had issued a tariff giving effect to this arrangement as from January 15th, 1915.

The C. P. R. embargo on lumber shipped from points on the C. N. R., I. C. R., and G. T. R. when destined for team track delivery at Mile End, Montreal, had been before the Railway Commissioners several times during the past two years. On November 27th the Commission decided to have its chief operating officer make an inspection at Mile End to see if congestion (which was the reason given by the railway for placing the embargo) existed. That inspection resulted in the Board, on December 11th issuing an order requiring the C. P. R. to cancel the embargo against traffic for team track delivery.

An advance over the 1913 figures in summer rates to Montreal on lumber for domestic consumption and for export to British and foreign countries was objected to by the association. The Railway Commission however, had decided not to interfere so far as rates on lumber for domestic consumption were concerned, but ordered that the railways must reinstate the rates previously in effect on lumber to Montreal for export on the basis of 5c from Ottawa, and that rates from points governed by Ottawa should bear a proper relation thereto.

The report concluded with an expression of regret at the death on April 17th of Mr. Wilbur T. McLaurin, one of the charter members of the Association, who had always been a staunch supporter and an active member of the organization. By his geniality and kindliness, he had established for himself a high place in the regard of all the members of the trade.

The officers were re-elected as follows: President, Mr. A. H. Campbell; vice-president, Mr. P. D. Gordon; treasurer, Mr. F. W. Cotter; directors, Messrs. George Esplin, W. A. Filion, D. H. McLennan, and T. J. Rutherford. Mr. P. D. Gordon was unanimously chosen as the Association's nominee for election on the Council of the Board of Trade.

## Lumbermen Say Banks Are Too Tight

Several articles were recently published in the Canada Lumberman drawing attention to the fact that many lumbermen were complaining that the banks were discriminating against them and refusing to lend them money for their operations. This complaint is voiced in a recent Toronto newspaper, by a correspondent who says:—

"We are informed by a reliable and well-known lumberman that the banks are refusing to advance money to get out stocks of lumber. Whereas, in the past this particular lumberman has had $40,000 advanced for this purpose, they have now refused a request for even $5,000 advance. We are informed by the gentleman in question that this is the prevailing trouble throughout the district in which he is located. It means that everything is at a standstill and thousands of people will be thrown out of work who have been in the habit of making a living out of the lumbering industry. It will also mean that when there is a revival of business there will practically be no lumber in the market."

The newspaper commenting upon this report prints the following interview with the general manager of a large Toronto bank:—"The banks are not discriminating against the lumber industry. At the present time great caution must be exercised in making loans, and businesses which if they continued operations during the present period of trade depression, would over-produce any of the commodities, can not be helped. I think this is generally the view held by the banks. Any tendency to over-produce the supply of lumber would hurt that market. It would be a bad thing for the lumberman and it might jeopardize the bank's loans. Companies which have Government contracts for the supply of merchandise are receiving loans from the banks, and any concern or individual, whose credit is good, and who can show us that he has reasonable grounds to believe that there will be a market for his product will get loans. We have plenty of money for legitimate purposes, but we do not wish to assist any over-production at a time when trade depression is being felt throughout the world."

## Lumberjacks Contribute to Patriotic and Belgian Funds

Lumberjacks in the employ of Shepard and Morse, of Ottawa, have subscribed liberally to the Canadian Patriotic and Belgian Relief funds. Checks amounting to $639 have been received from the four camps the company is operating in the woods, by Mr. P. C. Walker, who will send half of the amount to the treasurer of the former fund and half to the treasurer of the latter.

This amount was subscribed voluntarily and some of the men gave more than a week's pay. Mr. E. R. McColgan, superintendent of all the camps, subscribed $2; Napoleon Millaire, foreman of No. 10 camp in the Kippewa district, gave $10 and his men made the amount up to $158.50. In camp No. 2, William Cosgrove, the foreman, donated $10 and the men collected enough to make the total from No. 2, $150. Camp No. 3 subscribed $66,50, Charles Courneau, the foreman, giving $5. At the North River camp $58 was collected, one subscription coming from Louis Bieveneau, a habitant living near the camp.

All these camps are on the Kippewa. From the camp on the Quinze $200 was collected, Austin Ethier, the foreman, gave $5, and J. R. Smith, the bookkeeper, $10.

Canada's trade in forest products for the twelve months ending with November, 1914, amounted in value to $41,954,640, as compared with $42,875,089 in 1913, and $43,112,393, in 1912. For the month of November the values were as follows: 1914, $3,429,970; 1913, $4,107,090; 1912, $3,981,040.

Hon. G. Howard Ferguson, M.P.P. for Grenville, has been appointed Minister of Lands, Forests and Mines for the province of Ontario succeeding Premier Hearst, who has administered that department for a number of years. Mr. Hearst will, however, retain the Northern Ontario Development branch, which will be detached from the Department of Lands, Forests and Mines.

Geo. Gordon & Company, Cache Bay, Ont., have favored their friends with a large calendar for the year 1915. The calendar is especially suitable for offices, the type being large and clear. An interesting picture entitled "Alone" decorates the calendar, representing an attractive young lady seated in a row boat. The picture is attractively colored and will be prized by those who receive copies.

Mr. J. L. Englehart, Chairman of the Temiskaming & Northern Ontario Railway Commission, reports that there is much activity in the new Northern Ontario districts among settlers, in connection with taking out pulpwood, for which, he states, a large market is available. He states also that he expects the season's cut to be possibly in the neighborhood of 100,000 cords. A number of rossing plants have been established along the line of the new railway.

E. H. Frank, traffic manager of the Western Pine Lumber Association, Spokane, has put in eighteen months of hard work on the compilation of a rate book which quotes rates to 33,000 different destinations, including every shipping point in Western Canada and the United States, with the exception of a few southern states. A rate is quoted to every destination on 21 different weights, making a total of 693,000 different items. The book will enable inland Empire millmen to save thousands of dollars a year by arranging a reconsignment at some intermediate point in order to take advantage of a lower rate. For instance, the through rate from Spokane to Calgary, Alta., is .33c a hundred. From Spokane to Eastport the rate is eight cents, and from Eastport to Calgary it is 22½c. A reconsignment at Eastport thus saves the shipper 2½c a hundred, and on a car of 40,000 pounds the saving is worth while. It may mean the capture of an order from a British Columbia millman.

### Ontario

The Goderich Milling & Lumber Company, Goderich, Ont., are constructing a planing mill, one-storey high, 200 x 60 ft.

J. R. Booth's new timber mill at Ottawa, to replace the one which was recently destroyed by fire is expected to be ready for operation by the first of April.

The Board of Works of the City of Ottawa will soon call for tenders for the city's supply of lumber for the year 1915. The Mayor of Ottawa is Mr. N. D. Porter and the engineer Mr. F. C. Askwith.

The plant of the Estate James Davidson at Ottawa was closed down recently for two weeks in order to make repairs to the machinery and to take stock. It was reopened on Monday, January 11th with a staff of 175 employees.

The Little Sturgeon River Timber Slide Company, Limited, has been granted permission to increase its capital from $15,000 to $18,000, and the term of its existence has been extended for a further fifteen years from December 14, 1914.

A Dominion charter has been issued to the Beck Manufacturing Company, Limited, London, Ont., with authorized capital of $400,000. The incorporators include Sir Adam Beck, W. Kingston, and R. M. Toothe, all of London, Ont. The object of the incorporation is to acquire and carry on the several businesses now carried on at various points in Canada by the incorporators. The power given by the charter includes the carrying on in all of its branches of a lumber, timber and box business.

### Eastern Canada

Cote & Freres, lumber dealers, have been registered with head office at Montreal.

Dussault & Houll have been registered as lumber dealers at Victoriaville, P.Q.

The two-storey sash and door factory of Gingrass and David, St. Real Street, Bordeaux, P.Q., has been destroyed by fire.

The woodworking factory belonging to C. Allison, J. L. Peck and Carl Duffy at Hillsboro, N.B., was recently destroyed by fire, the loss amounting to $3,000.

The equipment for the plant of the Bathurst Lumber Company's new pulp mill, at Bathurst, N.B., is arriving. Installation of the machinery will commence about February 1st.

A partnership has been formed by Byron H. Kinghorn, Fredericton, N.B., and M. J. Poupore, Meductic, N.B., to carry on the business of manufacturing **pulpwood, with head office at Meductic.**

Wm. Morice, Middle Sackville, N.B., has bought the Ogden sawmill which has been out of use for a number of years. The mill will be taken down and re-erected on the site of the sawmill operated by the Morices for many years. It will be ready for operation about the middle of May.

The M. F. Schurman Company, Limited, Summerside, P.E.I., who recently lost their sash and door factory by fire, report that they have not yet settled their plans for rebuilding. They expect however, to rebuild in the spring and to construct their new plant of brick.

Joseph Bedard & Sons, Richmond, P.Q., have rebuilt the sawmill which they lost by fire last summer. They have put in a complete outfit of new machinery, and intend to take out the same amount of logs this winter as usual. They report that they expect the lumber trade to improve in their section next spring.

The Fredericton Barrel & Box Milling Company has been incorporated with head office at Fredericton, N.B., and authorized capital of $9,900. The applicants for incorporation were L. R. Bull, Fredericton; F. W. Hatheway, Fredericton; Chas. Hamilton, Gibson, N.B.; C. Wetmore, Woodstock, N.B., and T. J. Feeney, Fredericton.

The St. Lawrence Pulp and Lumber Corporation of Chandler, Que., recently passed into new hands. The new General Manager is Mr. J. E. A. Dubuc, General Manager of La Compagnie de Pulpe de Chicoutimi. Mr. Dubuc reports that every possible effort is being made this winter to have the plant completed and ready to run by next March.

Application is being made to the government of New Brunswick for the incorporation of the O. B. Davis ompany, Limited, to acquire the logging, lumber manufacturing and general trading business carried on by Oran B. Davis at the parish of Drummond, Victoria County, N.B. The head office is to be at the parish of Drummond. The authorized capital stock of the company will be $49,000 and the incorporators will include O. B. Davis, Grand

Falls, N.B.; H. G. Kitchen, Fredericton; D. S. Hooper, parish of Drummond; C. A. Kitchen and D. G. Kitchen, Fredericton.

C. H. Swift & Sons, Utica, N.Y., and Sherbrooke, P.Q., report that they are considering the construction of about five miles of light railroad for logging purposes. Their intention is to rent, if possible, a sufficient quantity of relaying rails for this road and either rent or buy a second-hand five to ten ton locomotive. They will also require some cars for logs.

The New Brunswick Pulp & Paper Company's mill at Millerton, N.B., suffered an almost complete loss by fire on New Year's Day. The damage is estimated at $100,000. The chemical plant and a portion of the boiler house were alone left standing. The mill was built by Mr. James Beveridge, a pioneer of the paper-making industry in New Brunswick. It had not been running lately, but new machinery was under order. It is understood that the insurance amounts to about $97,000.

## Western Canada

It is reported that the Canadian Pacific Mills, Limited, which was recently organized with a capital of $9,500,000 and took over the property of the Ocean Falls Company at Ocean Falls, B.C., will erect a large paper mill.

The North Rupert Investment Company, Limited, with head office at Vancouver and authorized capital of $4,000,000 has recently been incorporated. The powers of the company include carrying on business as timber merchants and manufacturers of lumber, shingles, pulp, etc.

The firm of "Von Cramer & Company, Limited," has been incorporated with head office at Vancouver and authorized capital stock of $10,000. The company's powers include the carrying on of business as timber merchants, sawmill owners, lumber manufacturers, etc.

The O'H.C. Lumber Company, Limited, has been incorporated with head office at Vancouver, B.C., and authorized capital of $25,000, to acquire the interest of A. B. Cody in timber berth No. 326 on the North Arm of Burrard Inlet and in the logs and plant upon the berth. The company's powers also include the manufacturing of lumber, shingles, etc.

## Nova Scotia Trade Conditions

Nova Scotia lumbermen generally regard the year of 1914 as having been a fair one, says a Halifax report. Though, at the present time there is no difficulty in securing a market for the cut of Nova Scotia, the great obstacle is the scarcity of tonnage. The demand in England for lumber has increased extensively since the outbreak of the war, but the problem is how to deliver to the Old Country. Freights are extraordinarily high and shippers are confronted with an unusual situation. Since the commencement of the war Nova Scotia shippers have made considerable profit, however, and there is some reason to hope that the cost of transportation, now so high, will decrease materially in the near future. Cargoes which were booked months ago, naturally were shipped at the low rates of freight prevailing at the time of booking, and in this way the Nova Scotia lumbermen profited.

The United States market is in a state of depression at the present time. Mr. Colin C. Tyrer, of Halifax, recently returned from a visit to New England, and reports that, owing to the financial depression, building operations have declined. The United States market opened in excellent condition last spring, but weakened in the summer and when the war came, fell off rapidly. Spruce scantling and planking from Nova Scotia formerly delivered in New York for $23 per 1,000 ft. could command only $17. United States houses however are hoping for a revival of the market in the spring.

New England lumbermen are availing themselves of the market in Great Britain and are competing with Nova Scotia and New Brunswick there. They have one advantage over these two Provinces in that they can offer better specifications both in regard to percentage of broad widths and average lengths.

Nova Scotia's cut for 1914 is estimated at about 350,000,000 feet, which is about fifty million short of the 1913 output. The decrease is due to the weakness of foreign markets and the cessation of operations by two or three large cutters in Western Nova Scotia. The cut in Halifax County is estimated at over 30,000,000 feet.

The tonnage situation to-day is unprecedented. In the summer, freight rates were about 35 shillings per standard. A shipment was recently booked at 95 shillings and the owners of another ship quoted the extraordinary rate of 115 shillings.

The lumbering industry in Ontario has had the distinction of being the first to be connected with a claim paid under the new Workmen's Compensation Act, which went into force on January 1st. John Masters, an employee of the Shortreed Lumber Company at Kearney, Ont., who was engaged in hauling logs, sustained a severe laceration of the back of his hand, which will incapacitate him for some time. The accident occurred when the Workmen's Compensation Act had only been in force for a few hours. As long as he is laid up Masters will receive compensation to the extent of 55 per cent. of his earnings.

# Timber Values Stay Put

Products of timber fluctuate in price. Demand is the governing factor in establishing the value of such products.

Timber prices also are regulated by demand but it is known there will be a call for every tree from which merchantable lumber can be produced.

## Find Out

where the "For Sale" timber is and what it is. Such information should be secured now. It will be of value later. Our competent organization can secure the data you need.

Pending the advent of a broader demand there is opportunity for profitable investigation.

# Surfacing the Modern Way—

The way of lowest surfacing costs, and of better, smoother results in general work where a wide range of material is run, is the way of

# The Berlin 177 General Utility Double Surfacer

This tool has earned a reputation, second to none, for smooth dependable surfacing on all work in the average mill or shop. Uniform quality of finish is an established result of its use. Economy is equally certain because of the rates of feed, which may be as high as 100 ft. and because of the ability to use the full bed width, as the illustration shows. But its greatest popularity and usefulness results from its extreme adaptability. For this surfacer will actually work pieces as thin as 1/8" or as thick as 12", whether long or as short as one foot.

It has the heavy, powerful build required for large stock dressing, and the compact, accurate construction necessary for small, light work. With rolls close coupled, it feeds crooked and warped stock with least friction. Sectional rolls and sectional chipbreaker afford ample yield to run pieces of varying thickness, if desired.

Look into the adaptability of this surfacer. You will benefit as all its users do.

We'll prove this when you write. Simply tell us the nature of your planing so that we can send you samples run over the proper heads and at the right speed for your work.

***Write today—a post card will do.***

# Duplicating Nature's Process

Case hardening is the result of lumber which is merely surface dried. The wood splits, cracks and demands only a low price on the market.

Sturtevant
(REG. CAN. PAT. OFF.)

## Common Sense Moist Air Dry Kiln

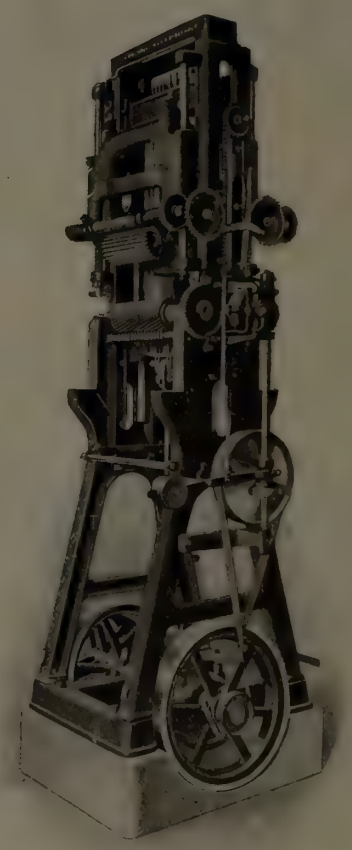
dries lumber from center to surface and under no circumstances is it possible for the kiln attendant to bake the lumber.

The Sturtevant Kiln duplicates nature's process and gives perfectly dry lumber.

Letters from actual users in all parts of the country enable us to offer you evidence as to how our Common Sense Kiln will do work similar to yours.

Shall we send you bulletin 2200?

**B. F. Sturtevant Company, of Canada Ltd.**
Galt, Ontario



# BOLINDER'S

## Saw Mill and Woodworking Machinery

meets the most exacting requirements of the up-to-date Saw Mill man.

Designed to meet the present day demand for machines capable of rapid and economical production with a minimum amount of labor.

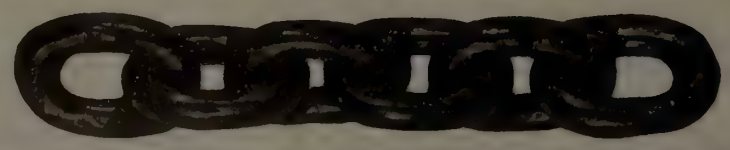
The Bolinder line includes **High Speed Log Sawing Machines, Double Edgers, Cross Cut Saws, High Speed Flooring and Matchboarding Machines, Planing Machines, Automatic Boxboard Machines, Circular and Band Resaws, Special Patented Tonguing and Grooving Cutters, Etc.**

Ball Bearings used throughout.

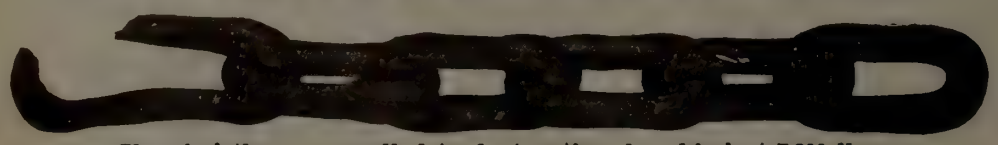
For further particulars apply to

**The Swedish Steel & Importing Co. Ltd.**
Montreal, P. Q.
Sole Agents for Eastern Canada for
J. & C. G. Bolinders Co., Limited, Stockholm, Sweden

# "AJAX" The World's Strongest Chain



Above Cut shows a piece of 9-32 inch Chain proof tested to 3,000 lbs.



Showing the same pulled to destruction, breaking at 7,800 lbs.
(See how this Chain stretched before breaking.)

Do your log loading with the "Ajax" loading chain, every link of which is guaranteed. The illustration tells a convincing story.

Manufactured only by

**Standard Chain Company**
Pittsburgh, Pa.
The World's Largest Chain Producers.
Montreal: Alexander Gibb, St. Nicholas Bldg.
Winnipeg: Bissett & Loucks.
Vancouver: John Burns, 329 Railway St.

# "STERLING BY-PASS" EXHAUSTERS

**Entirely new in principle. Nothing like it ever offered before**

**Material Does Not Go Through The Wheel**

**More Durable—No Vibration—Wheel Not Overhung**

**Saves Power**

***Write for details regarding this exhauster***

**Sterling Blower Company**

**Main Office and Works:—HARTFORD, Conn.**

# Dixon's Graphite Axle Grease

Here's a grease that will go farther and last longer than any other grease you can buy. That means economy. And because it is weather-proof and water-proof and weight-proof, it gives the kind of lubrication that saves wheels and axles and horse-flesh. If you want to prove this, ask for a sample and "Axle Grease Booklet", No. 238.

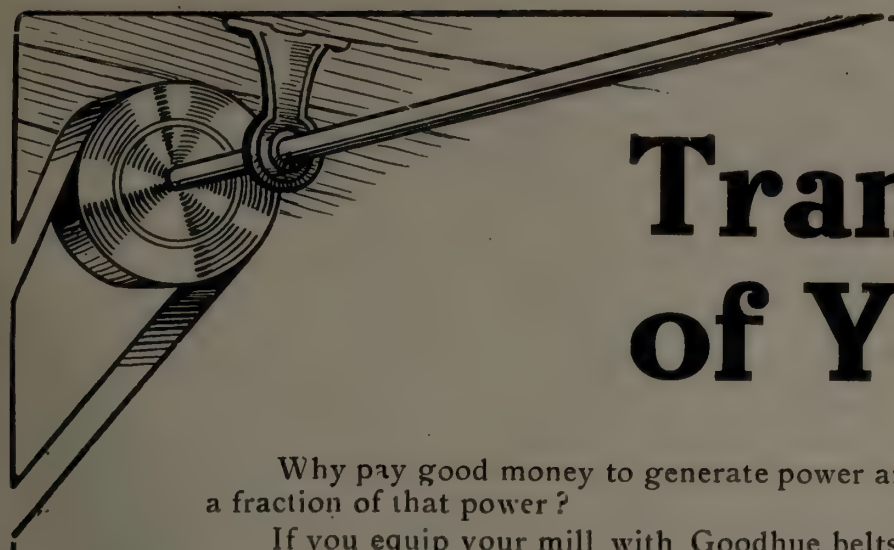
## "Wilson Bros." Hardwood Flooring

**is the Flooring that is manufactured expressly to supply the demand for the best. It is made by modern machinery from carefully selected stock, and every precaution is taken throughout our entire system to make it fulfil the requirements in every particular. Write us for prices.**

**Wilson Bros., Limited - Collingwood, Ont.**



# Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power?

If you equip your mill with Goodhue belts you can transmit 100% of the power generated.

Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

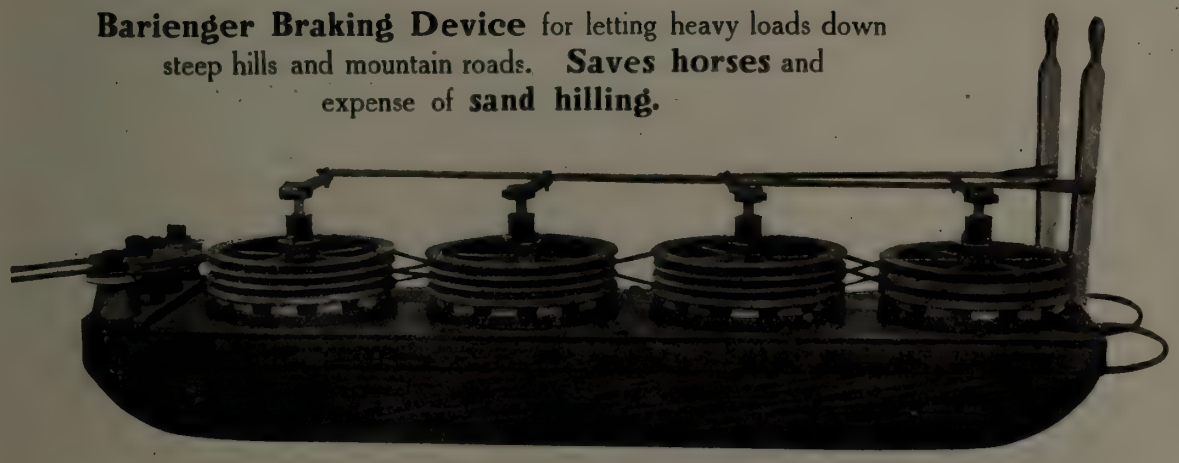
*Write us for particulars and prices*

YOU CAN DO IT WITH A— **GOODHUE BELT**

J. L. GOODHUE & COMPANY, LIMITED.
DANVILLE, QUEBEC CANADA.

# You Need a Brake This Season

**Barienger Braking Device** for letting heavy loads down steep hills and mountain roads. **Saves horses** and expense of **sand hilling.**



Now is the time to consider the use of this brake for another season before hauling roads are planned and built. By using this brake lumbermen are able to work much steeper roads, and in consequence, shorter roads and there is a considerable saving in the cost of building roads.

# Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

# Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

**W. W. Cory,**

Department of the Interior, Ottawa, Deputy Minister.

TRADE L&I.J. WHITE 1837 BUFFALO,N.Y. MARK

Planer

## Why Are WHITES' Knives Different?

You can probably buy knives cheaper so why should you buy WHITE KNIVES? You can buy $2 shoes—why don't you? They look just as good, will wear just as good for a while. Of course they will only wear about half as long—you **MIGHT** get a pair that would wear as long if you want to take a chance.

## We Don't Believe In Taking Chances

Do you? Don't you want something you can depend upon—something that you don't have to keep monkeying with half the time to keep in order, knives that wear 10 to 50 per cent longer without any jumping, bending, chipping, or breaking in the weld? Ask our agents for quotations, or write us.

MANUFACTURERS:—
**The L. & I. J. White Co.,** 20 Columbia St., Buffalo, N. Y.

Agents:—
Radcliff Saw Co., Toronto, Ont.

# Veneer Machinery

The illustration is a front view of the Coe style "A" extra heavy pattern rotary veneer cutter. It is made for any length of knife up to 120 inches; diameter of swing, 68 inches, diameter of spindle, 6 to 8 inches; weight is proportionate to length of knife. This Coe style "A" cutter is used for the heaviest cutting and for making the finest figured veneers. It is the best Rotary Veneer Cutter made in the world.

**The Coe Dryer Delivers Bone Dry Stock from Green Veneers.**

**The Coe Automatic Roller Dryer is built of Steel, Iron and Asbestos.**

The Coe Automatic Roller Dryer is designed and built entirely of steel, iron and asbestos which construction gives it unusual durability and ability to withstand the severe service of being operated under the high temperature necessary to dry veneers thoroughly and rapidly.

The Coe dryer will handle any size or thickness of veneers of any species of wood. It will deliver them bone dry, commercially flat and straight without splits, wrinkles or checks or without discoloring, glazing or polishing their surface.

Coe dryers have been designed and built for handling all kinds and thicknesses of stock and for all capacities.

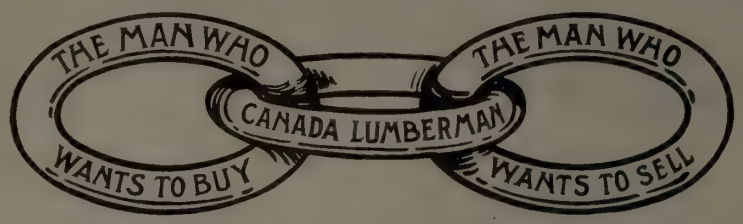
# The Coe Manufacturing Co.

**Painesville, Ohio, U. S. A.**

*Established 1850*

***The oldest and largest manufacturers of complete veneer equipment in the world.***



# The Connecting Link

Way back in 1880 the **Wanted and For Sale** columns of the Canada Lumberman and Woodworker were used extensively by the lumbermen of Canada for the purchase and sale of timber, lumber and machinery.

Time has but served to enhance the value of this medium, until to-day the **Wanted and For Sale Department** of the Canada Lumberman has become a national market.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide field, the percentage of waste circulation for advertisers has been reduced to a minimum.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

**Canada Lumberman & Wood Worker**

"AMPHIBIA"

*Amphibious as The Frog*

# "AMPHIBIA"

## The Intelligently Built Waterproof Leather Belt

A belt to run efficiently must be built intelligently from the obtaining of hides at their proper season through every stage of manufacture to the finished belt.

From nearly 40 years experience in the tanning and manufacturing of the best leather belts we have a thorough appreciation of what leather belt in a saw or planing mill must stand. With this knowledge we have built "AMPHIBIA" waterproof leather belt—built it intelligently from the best hides.

The leather in "AMPHIBIA" belting is given a special tanning which renders it absolutely waterproof and also extremely flexible. It has a surface that grips the pulleys and transmits a maximum amount of power.

Send us a trial order stating where the belt is to run and we will ship you something that will exceed your ideals of a perfect leather belt. Write us.

## To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

# Arkansas Soft Pine

## "Pick of the Pines"

A keen interest in the uses and values of Arkansas Soft Pine is being manifested by home owners, carpenters, contractors and architects. You, the retail lumberman, should have knowledge of the information we are giving them.

The accompanying advertisement contains explicit and reliable data. It is recommended for your perusal.

How about your stocks? Have you all the Good Arkansas Soft Pine your trade will need this year?

Are your customers experiencing any difficulty in securing all the Arkansas Soft Pine they need for interior and exterior work?

Crossett Lumber Company, Crossett, Ark.
Eagle Lumber Company, Eagle Mills, Ark.
Edgar Lumber Company, Wesson, Ark.
Fordyce Lumber Company, Fordyce, Ark.
Freeman-Smith Lumber Company, Millville, Ark.
Gates Lumber Company, Wilmar, Ark.

Arkansas Lumber Company, Warren, Ark.
Cotton Belt Lumber Company, Bearden, Ark.

## A Special Message Addressed to You

If you had assembled all the facts pertaining to all the pines you would select **Arkansas Soft Pine** for all manner of interior woodwork, and get your **"Pick of the Pines."** Your conclusion would be the same as that reached by the United States Government officials, if you, as they, were absolutely unbiased and guided by the facts your investigation brought to light.

**Predicated on the investigations that been made for you by Uncle Sam you should employ Arkansas Soft Pine for interior and exterior use for these reasons:**

FOR THE INTERIOR—No other wood shows such a variety of pleasing figure. Some of it is splashy and bold; some of it has been delicately engraved by nature, the greatest of all artists.

Its uniform texture insures the even absorption of fillers, stains or dyes and a proper finish with shellac, varnish or wax. Properly treated an effect is secured that is unsurpassed by the finished appearance of any other wood.

FOR THE EXTERIOR—Arkansas Soft Pine contains practically no rosin or resinous oils. There is a notable absence of pitch streaks. It does not gum the carpenter's tools or power machinery.

Open cells permit of the absorption of sufficient of the oil and pigment to bind paint firmly to the surface to which it is applied. The result is that Arkansas Soft Pine holds paint. It is easy to work and worth working.

These are elemental Arkansas Soft Pine facts with which you should be familiar, because the difference between the cost of this wood and others not so good is so slight that you cannot afford to take a chance.

*For Interior Woodwork there is no comparison between the value of Arkansas Soft Pine and other softwoods.*

**Special For You:** We have a limited supply of finished samples. We will honor requests in the order received. Send for yours.

1 8-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

## FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

2 Double Duplex, high pressure Water Pumps.

1 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

If You Want Real Service Use

## Dixon's Silica-Graphite Paint

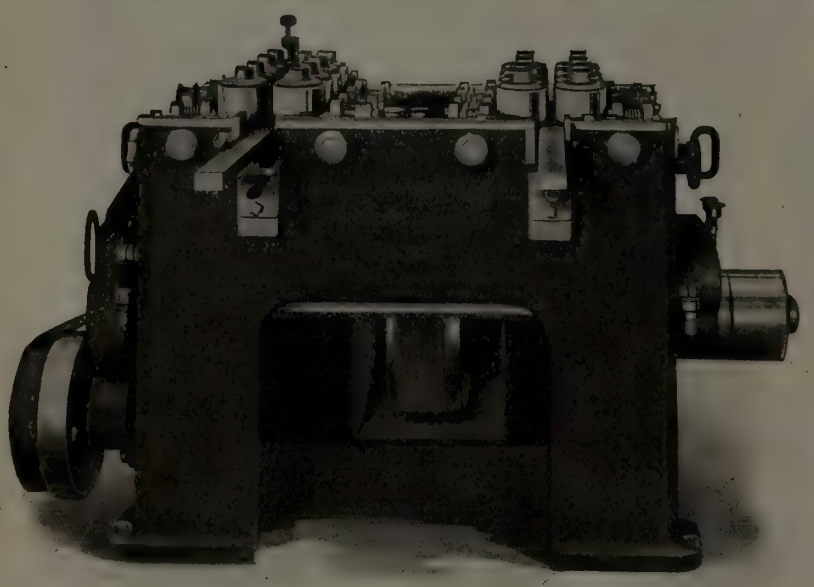
It will give you more real protection per dollar spent than any paint you can buy. That is why Dixons—even at a higher price—is the least expensive paint you can use. The price you pay for Dixon's is a price paid for dependable protect on against the things that destroy your exposed metal surfaces. Send for "Protective Paint" Booklet No. 238—B.

Made in JERSEY CITY, N. J., by the

**Joseph Dixon Crucible Company**

Established 1827

## Box Board Matcher



Let us mail you catalogue of Box Factory Machinery and Horizontal and Vertical Re-saws.

**Mereen - Johnson Machine Co.**

MINNEAPOLIS, MINN.

**Not altogether what we say but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

**West & Peachey - Simcoe, Ont.**

## The OPERATING EXPENSE of

a Shaw Motor-Headworks or Gasoline Warping Tug

## IS LESS THAN $10.00 PER DAY

This Includes, Full Crew (less log men) Fuel, Oil, Upkeep and Depreciation

## IT WILL WARP 2,000,000 FEET OF LOGS or TOW 100 BOOM-STICKS

*Manufactured by* **RUSSEL BROTHERS - Fort Frances, Ont.**

# Hilke Stacker

A 40-foot Hilke Lumber Piler in the yard of Seattle Cedar Lumber Company, Seattle, Wash.

A 30-foot Hilke Piler in the yard of Shevlin Clark Company, Ltd., Fort Frances, Ontario, Canada. Plain Saw Dust Roadway.

## A Saver of Space, Lumber, Time and Money

This machine will pay for itself from one to six times per annum, all depending on the scope of its opportunities.

It reduces by half the cost of piling and unpiling lumber.

It saves half the cost of alley floors or roads.

It reduces by half the number of pile bases.

It cuts squarely in two the cost of roofing lumber.

It saves just half your yard space, and this always means much even where land is very cheap, because it costs money and lots of it to haul lumber around a yard.

It takes lumber down from high or low piles with perfect freedom from breakage or injury.

It sets the pace for the men and helps them to do much work with little labor.

It is as mobile as the men who operate it and when placed in front of a pile is instantly ready for work.

It removes at once and forever the need of using elevated tramways, with their great first cost, impaired circulation and imperfect drying below their surface.

It is a maker for efficiency because it is itself so efficient that it naturally turns the lumberman's mind toward other possible yard economies of which there are usually many never before observed. It absolutely eliminates breakage of lumber in piling and unpiling, an important item.

It is patented in the United States and Canada by Henry C. Hilke, and it is manufactured in Canada and the United States

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

**Vol. 35 Toronto, February 1, 1915 No. 3**

# The Lumber Trade of 1914

Expectations that failed to be realized and developments that no one in the lumber business dreamed of in advance were the outstanding characteristics of the year 1914 from the lumberman's point of view. There was every reason during the first few months of the year to believe that trade depression was passing away. Almost everyone had come to think that this was the case. The situation was encouraging in nearly all its details when the European war broke out. It is no exaggeration to say that by the present time we would have been well advanced on the road to normal trade conditions, had the war not occurred; but with the coming of the war not only had we to face its enormous military consequences, but also to adapt ourselves to a new trade situation for which we had no precedents of any value. Trade had to meet an entirely strange situation. It is to the credit of the people of Canada that it was not long before trade commenced to feel its way in the dark. The most important outcome of the situation up to date is the fact that an enormous readjustment of industrial conditions has already been effected. In Canada we have already felt our feet touching upon a firm bottom and are now making our way painfully, but confidently towards renewed activity.

A year ago we said farewell to 1913 and all its business perplexities with a feeling of infinite relief. It had been a year during which every section of Canada had felt, in greater or less degree, the blighting effect of a period of speculative expansion which had been in progress for several years. At the beginning of 1914 we felt that we had passed the crisis of this speculative fever and were on the mend. We believed also that there were better times in store for us after our industrial system had been purged of the ill effects of its nervous breakdown. We had little thought that other factors were at work which would, in a twinkling hurl us into a new situation of far greater difficulty than the one through which we had passed. We progressed throughout the first half of 1914 in a promising manner. We saw the demand for lumber improve and the prices become firmer. We saw the depression in British Columbia apparently reach its lowest depths and make a halt which gave promise of introducing a period of improvement. We saw building activity and manufacturing activity in central Canada commencing to increase. We saw the farmers of the country preparing to harvest an excellent crop in a market which would pay good prices. We saw the eastern provinces renewing their business activity in response to a better demand, both domestic and foreign, for their numerous products. Briefly, we expected, with good reason, that we were sailing at last before the wind and would not have to face again, for several years at least, such industrial storms as those of the previous year or two; but the beginning of 1915 finds us, in a more remarkable and difficult situation than any which can possibly arise out of the simple operation of the laws of supply and demand. What the future may have in store for us is something which we cannot work out from the meagre information at hand. We have nothing to work upon in the way of precedent. We have only our own determination and common sense to help us in peering into the future. The most profitable thing we can do at present is to consider where we stand today. As to the past our best cue is, to conclude that there is no use in crying over spilt milk, for, as a wag once said, "There is plenty more to spill," and if we keep looking backward long enough, we are likely to spill some of that which is left.

---

Considering the situation in which we find ourselves today it is chiefly interesting and important because of the different effects which the revolution in industrial conditions has had upon the trade of the different sections of Canada, and the chief fact of interest is a peculiar one, namely that that part of Canada which is nearest to the seat of war is benefitting from the abnormal demand for wood of all kinds which has arisen out of the war. While the east is benefitting in this way, central Canada is securing some benefit and is managing to get along at least on an even keel, though making but little progress in advance, so far as the lumber industry is concerned. It is marking time to a great extent, meeting the requirements of a very quiet market. In spite of the quietness however, Ontario trade is looking forward with considerable unanimity to a better trade situation in the spring. West of Ontario, in the Prairie Provinces, trade is more or less at a midway stage between the quietness of Ontario and the dullness of British Columbia. The grain crops of the past year which have been sold at good prices are doing much to place the trade of the Prairie Provinces upon a safe basis. It is pretty generally believed that next summer, whatever may happen in connection with the war, the lumber trade of the Prairie Provinces will be active.

When we come to the province of British Columbia, the situation is the least favorable of any in Canada. The Pacific Coast provinces, unlike the others of Canada, had not been able to counteract the ill-effects of the previous few years of speculative expansion, before the war broke out. British Columbia was the chiefest sinner of all the Canadian provinces in connection with the unwarranted speculation which spread all over Canada up to about the spring of 1913. Real estate in British Columbia had risen to prices which discounted many years of future development and even went beyond the reasonable expectations of the future. Hand in hand with this went a free and easy treatment of credit and an increase of manufacturing capacity in connection with the lumbering industry, which have been the chief factors in its undoing. Today the lumber manufacturing industry in British Columbia recognizes the serious situation which it has reached and is earnestly discussing the best means of getting back to a profitable basis, at the same time preventing the recurrence of such a situation in the future. There is no doubt that the industry in British Columbia has had many outside evils to contend with which were not of its own making. Competition of the keenest kind has met it in all its markets and its manufacturing and marketing costs have been greater than those of other manufacturing localities, yet we believe that a more conservative policy in connection with increasing the productive capacity of the province, together with a more radical treatment of the real estate fever in its early days, would have gone far towards enabling the province to meet the present situation as successfully as the other provinces.

There would be no advantage in reviewing the course of prices

during the past year. Such an analysis is interesting only when it enables us to construct a basis upon which to work out the probabilities in connection with the prices of the immediate future. Nothing which happened last year will assist us in this regard. We have to face the year 1915 with our business situation very much in the hands of fate, and to make the best of the situation as it develops. The future course of the lumber industry depends upon events which still have to happen. Throughout Canada today there is little accumulation of stocks. There is no excess of production. In the eastern provinces production is keeping up to the average, probably exceeding it, because there is an abnormal demand for its lumber product. In Ontario, production is being greately decreased, with the probable exception of the one important district of the Georgian Bay where large quantities of down timber have to be cut in order to be saved from destruction. There is no question that during the next few months there will be no surplus of lumber stocks. Manufacturing costs in connection with such lumber as is produced next year will have been much less than normal, so far as the woods operations are concerned, as labor is cheap and more efficient, and the outlook is for a fair season so far as logging conditions are concerned. The cutting season was excellent in nearly all parts of the country. The drawing season started out well, although at the time of writing the weather had softened to such an extent that many localities were suffering from lack of frost. However, the outlook in this connection was still promising as most of the hard weather was still to come, according to the records of previous winters.

The probable demand for lumber for next spring and summer is something which no one cares to predict. It is thought, however, by some lumbermen who are not often wrong, that there will be at least a fair amount of building activity. Doubt also prevails in connection with the probable requirements of manufacturers who use lumber as a raw material, also such large consumers as the railway companies. The lumber industry, however, may for the present take much satisfaction out of the fact that it is in a good situation to take advantage of improved trade conditions whenever they may develop and also is in a good situation to tide over any prolonged period of trade inactivity. When trade activity is again renewed the big consumers of lumber will immediately come into the market, because for many months they have been permitting their stocks to run down. The conclusion therefore of those who consider all the available facts in connection with the present situation is that a fair amount of trade may be expected to continue until such time as activity is again general, when the lumber industry will find itself once more enjoying an extensive and profitable trade.

## An Ontario Dealer's Review of Hardwood Trade

The year 1914 started out with us,—and we believe with most of the hardwood firms in Eastern Canada,—with a considerable number of orders left over from 1913. For a few months the factory trade was fairly good, both from Canada and from the United States standpoints; but as the season progressed the tendency of the factories in both countries was to curtail their buying and to purchase their stock only as they required it. As a consequence, our system of doing business for the year 1914 was completely changed from a contract basis to practically a carload basis. This necessitated more expense in the sales end of the business and a great deal more work in getting out the orders. On the other hand, these disadvantages probably helped us to establish important advantages because the extra efforts put forth to obtain new orders have produced for us a very considerable volume of new business. Accordingly, although the implement and piano trades fell off very heavily in their consumption of lumber, our aggregate business during 1914, thanks to the new carload trade, only decreased 4½ per cent. We ascribe this fortunate result very largely to several causes. In the first place we have been specializing in hardwood lines for a special trade. We have been giving very close attention to inspection of stock. We have been careful to apply favorable hardwood rules of inspection. Our customers therefore have come to regard our rules of inspection as a high standard, particularly suitable for the requirements of their trade.

Canada has, during the last few years, come to a realization of the suitability of hardwoods for all lines of finish. More particularly has this been the case during the past year and Canadians have also come to realize that a great deal of excellent hardwood is being produced in Canada which will give fully as high a class of finish as any imported stock. The tendency, since the commencement of the war, has been to place trade as much as possible in Canada. This has helped along the movement for the use of Canadian hardwoods in Canada.

We have no complaint to make for the year 1914. It possibly did not come up to our expectations, but when we realize the conditions of a great many of our competitors in all parts of the world, we have good reason to be well satisfied with our own situation. There has been no very material reduction in prices of hardwood during the past year and stocks of high grade hardwoods have been fairly well absorbed, so that, at the beginning of 1915, we do not think there is any more high grade hardwood in the country, and probably there is a little less high grade hardwood on the market, than there was at the beginning of 1914. Figures which we have recently obtained indicate that the production of hardwoods during 1915 will be considerably less than 50 per cent. of the production of other seasons. With anything like a normal condition of trade there should be very little fear of material reduction in prices, or of the necessity for carrying over any great quantity of hardwood lumber into next year.

We do not think there has been a time in many years when there was so little dry hardwood stock in the hands of the consumers as there is today. Furniture factories have done no buying worth talking of during the past year and have very little stock on hand today. Implement factories have pretty good stocks. One of the serious trade factors in Canada and in the United States today is the fact that no railway equipment is being bought. Car manufacturers throughout the country are at a standstill. This, however, has its compensating feature, namely, that the rolling stock of the railways is very much depleted. When they do get back their normal earning powers they will have to buy equipment. Taking everything into consideration we believe that during 1915 we will have a fair trade, but that we will have to make a renewed effort in order to maintain the volume of business at a normal level.

## Canadian Trade Balance More Favorable

The trade of Canada for the first six months of the fiscal year 1914-15 (Apr. 1 to Sept. 1914) shows dutiable imports entered for consumption amounting to $158,584,382; free imports, $121,753,446; domestic exports, $180,874,165; and foreign exports, $39,422,606, making a total trade of $500,634,599. In 1913, for the same period, dutiable imports amounted to $227,058, 618; free imports, $113,671,273; domestic exports, $188,405,245; and foreign exports, $22,467,297, giving a total trade for this period in 1913 amounting to $551,602,433.

During the months of August and September, 1914, the total merchandise imports amounted to $52,073,073; the free imports to $28,885,102; the coin and bullion to $27,337,040. The customs duty collected during these months amounted to $14,375,554; the domestic exports were $63,307,345. In 1913, during the same two months, the total merchandise imports were $77,275,252; the free imports, $35,008,118; the coin, $776,948. The customs duty collected amounted to $19,031,559; the domestic exports were $71,224,253.

According to unrevised reports, the total trade for the first eight months of the fiscal year, to December 1, 1914, amounted to $766,626,856, a decrease of only about $11,000,000, but inclusive of coin and bullion to the amount of $48,329,727. The customs revenue for the eight months was $53,628,018, as compared with $76,108,761 of last year. Exports of manufactures amounted, during the eight months, to $45,425,224 an increase of $10,,000,000. Exports of animals and their products increased $12,000,000 in the eight months.

The balance of trade against Canada was materially less than a year previous. It amounted in the eight months (April-September) of 1913 to $137,000,000. For the same period in 1914 the adverse balance was only $49,000,000.

## The New Australian Tariff on Imports

Reports have recently been received from the Canadian Trade Commissioner in Australia, Mr. D. H. Ross, giving an outline of the new Commonwealth Custom's Tariff, which was recently introduced by the Federal Parliament. The report states that three classes of increases have been made in the duties upon imports. The first increase is a general advance of from 5 to 10 per cent. in the preference upon goods manufactured in the United Kingdom, this increase being secured by advancing the general tariff of duties upon goods imported from all other countries to that extent. The second increase is in the duties from which increased revenue is desired. The third increase provides for the increased protection promised to Australian industries prior to the recent elections.

In the order named, the principal articles of goods and products of Canadian origin imported into Australia are (1) agricultural implements, (2) motor cars and vehicle parts, (3) printing paper, (4) lumber, and (5) fish in tins. Upon these items the duties imposed under the new tariff show substantial increases, while—in the main—the duties imposed upon similar lines of United Kingdom origin remain unaltered or with an increased preference.

The following statement shows the rates of duty under the new general tariff now imposed on certain articles in which the Canadian lumber manufacturers and pulp and paper manufacturers are interested, as well as the duties which were previously in force:—

| | | |
|---|---|---|
| Pulp for manufacturing paper | Free | 5 p.c. |
| Printing (glazed, unglazed, mill-glazed, or coatd in rolls or sheets not less than 20 x 25 inches or its equivalent and not ruled or printed in any way | Free | 10 p.c. |
| Wrapping paper | 5s. per 112 lbs. | 6s. 6d. per 112 lbs. |
| Mill-board; card-board; pasteboard; grey-board, leatherboard; wood-board and manilla-board | 6d. per 100 super. ft. | 1s. per 100 super. ft. |
| Wood:— | | |
| Timber, viz.:— | | |
| Timber, undressed, n.e.i., in sizes of 7 in. x 2½ in. (or its equivalent) and upwards, and less than 12 in. x 6 in. (or its equivalent) | 2s. per 100 super. ft. | 3s. 6d. per 100 sup. ft. |
| Timber, undressed, n.e.i., in sizes less than 7 in. x 2½ in. (or its equivalent) | 2s. 6d. per 100 sup. ft. | 3s. 6d. per 100 sup. ft. |
| Timber, undressed, cut to size for making boxes | 4s. per 100 super. ft. | 5s. per 100 super. ft. |
| Timber, undressed, in sizes less than 7 ft. 6 in. x 10 in. x 2½ in. for door stocks | 2s. per 100 super. ft. | 3s. per 100 super. ft. |
| Timber, dressed, n.e.i. | 3s. per 100 super. ft. | 4s. per 100 super. ft. |
| Architraves, mouldings, n.e.i., and skirtings, of any material | 5s. per 100 lineal ft. | 6s. per 100 lineal ft. |
| Shingles | 3s. per 1,000 | 5s. per 1,000 |
| Pickets, undressed | 2s. 6d. per 100 | 3s. 6d. per 100 |
| Pickets, undressed | 6s. per 100 | 7s. per 100 |
| Laths, n.e.i. | 7s. 6d. per 1,000 | 10s. per 1,000 |
| Laths for blinds | 25 p.c. | 30 p.c. |
| Spokes, dress or prepared (not being of hickory), 2 in., or under in diameter | 10s. per 100 | 12s. per 100 |
| Palings | 15s. per 1,000 | 15s. per 1,000 |
| Prepared hubs, n.e.i. | 1s. each | 1s. 3d. each |
| Rims, n.e.i. | 1s. 3d. each | 1s. 3d. each |
| Staves, dressed or partly dressed, but not shaped | 2s. 6d. per 100 | 4s. per 100 |
| Three-ply veneer | 5s. per 100 super ft. | 7s. 6d. per 100 sup. ft. |
| Veneers, n.e.i. | 3s. per 100 super. ft. | 5s. per 100 super. ft. |
| Timber, for making boxes or doors, being cut into shape, and dressed or partly dressed | 5s. per 100 super. ft. | 6s. per 100 super. ft. |
| Picture and room mouldings | 30 p.c. | 35 p.c. |
| Broom stocks, being square timber rough sawn into sizes suitable for the manufacture of broom handles | 20 p.c. | 20 p.c. |
| Timber, bent or cut into shape, dressed or partly dressed, n.e.i. | 25 p.c. | 30 p.c. |
| Hickory spokes, dressed 2 in. and under in diameter | 10 p.c. | 15 p.c. |
| Hickory, undressed | Free | 5 p.c. |
| Logs, not sawn | Free | 5 p.c. |
| Spars in the rough | Free | 5 p.c. |
| Spokes of hickory, roughturned, but not shouldered or tenoned | Free | 5 p.c. |
| Felloes of hickory, cut, shaped or bent, plain, in the rough | 10 p.c. | 15 p.c. |
| Rims of hickory, bent, squared, plain in the rough | 10 p.c. | 15 p.c. |
| Staves undressed | Free | 1s. per 100 lbs. |

The duty upon furniture is increased from 35 p.c. to 45 p.c. A duty of 10 p.c. is placed upon wooden tool handles attached to the tools. These formerly entered free. The duty on tool handles of wood unattached is increased from 20 p.c. to 25 p.c. The duty on woodware for vehicles remains unchanged at 30 p.c. for bars, shafts, whiffle-trees, etc. All other articles of wood, whether partly or wholly finished including sash and frames, window screens, split pulleys, washboards, etc., remain at 35 p.c.

# Will Form Board of Trade Section

### Toronto Lumbermen Decide to Affilliate with Board in its New Quarters—Proposal Unanimously Approved

A meeting of the lumbermen of the city of Toronto was held at the Board of Trade in its new quarters in the Royal Bank Building, on Friday, January 22nd. There was a large attendance and an interesting discussion took place upon the proposal to form a lumbermen's section of the Toronto Board of Trade; the result being that steps were taken with this object in view.

An excellent luncheon was served by the Board of Trade, after which Mr. J. L. Campbell was appointed chairman of the meeting and Mr. H. Boultbee Secretary. The Secretary then explained the objects of holding the meeting and outlined the events which had preceded it, since the formation of the Lumbermen's Club of the City of Toronto in the spring of 1914. This club had held a number of interesting luncheons and discussions and had finally passed a resolution in favor of affiliating with the Toronto Board of Trade, with the idea of forming a lumbermen's section of the Board.

The chairman then called upon several of those present to express their views in connection with the situation. Among those who spoke were Messrs. W. J. Lovering, John Donogh, J. B. Reid, J. G. Cane, W. C. Laidlaw, W. J. MacBeth, G. W. Boake, and J. E. Chamberlain. All the speakers referred with approval to the proposal for joining the Toronto Board of Trade and forming a section. Mr. F. G. Morley, Secretary of the Board of Trade, spoke, briefly outlining the necessary preliminaries to be attended to in the formation of a section. In accordance with Mr. Morley's suggestion a committee was appointed consisting of Messrs. John Donogh, J. B. Reid and the Secretary, to attend to the preliminary arrangements which involve the drawing up of a set of by-laws. When these are settled they will be submitted to the Council of the Board, accompanied by the signatures of the members wishing to form the lumbermen's section.

Considerable discussion also took place in connection with the disposal of the funds now in the hands of Mr. G. W. Boake, treasurer of the former Toronto Lumbermen's Club. A number of those who had subscribed to this fund were present and after the discussion they decided that the balance on hand should be returned pro-rata to all those who had subscribed.

During the discussion upon the proposal for forming a lumbermen's section it was made clearly evident that such a step would be of great advantage to the lumber trade in Toronto. Mr. J. B. Reid, who voiced the general opinion clearly, said that he was most emphatically in favor of such a step. From the business standpoint there was no doubt at all that the lumber trade in Toronto was desparately in need of some sort of an association to protect the lumbermen against one another and against the public. He spoke of the troubles which members of the trade often had and which became very apparent at the end of the year when it was found that the books contained a good many bad accounts. There were other troubles also of considerable importance, many of which might be removed by the formation of a lumberman's section of the Board of Trade. Mr. Reid's remarks were typical of those of the other members present, the general conviction being that with the endorsation of the Toronto Board of Trade behind the lumbermen's section, they would be in a position to introduce and carry through important and beneficial undertakings.

The meeting was adjourned, subject to the call of the chairman. The next meeting will be held shortly after the committee referred to above have completed their work.

---

Building operations in the United States during the year 1914, as indicated by reports from 68 of the principal cities show a decrease of only 9 per cent. as compared with those of previous years. Up to August 1st, when the war began the construction work was almost identical in volume with that of the first seven months of 1913. The loss occurred entirely during the last five months of the year, and was the result of the disarrangement of the financial market. The total value of building permits issued in 68 cities was $634,177,323, as compared with $697,594,916 for 1913. A few cities show substantial increases and all the others a small decrease.

---

The Canadian Lumbermen's Association have decided to postpone their annual meeting and banquet which was to have been held early in February. This decision was reached on January 19th, but the date for holding the postponed meeting was not then decided upon.

# Ontario Production Shows A Decrease

## Output of Lumber During 1914 Less Than in Previous Year by Fifty-seven Million Feet—Log Output Reduced This Winter

The following tables show the quantity of lumber, lath and shingles produced in the Georgian Bay and Northern Ontario district during 1914 and during 1913, according to reports which have been sent to the Canada Lumberman by the manufacturers. In conformity with the belief which prevailed throughout the year, the figures show that there was a decrease in the output of lumber in this district. The actual decrease was 57,644,326 feet, which is not so great when one considers the conditions which prevailed during the two years. The output for 1914 was 776,664,941 feet, which is only about 16,500,000 feet short of the output for 1912. Compared with 1911 when the output was 831,472,640, the output of 1914 shows a reduction of a little over 54,800,000 feet. Among the more important decreases shown during 1914 are the following:—Blind River, 2,600,000; Fesserton, 2,500,000; Fort Frances, 12,000,000; Gravenhurst, 2,300,000; Haliburton, 2,600,000; John's Island, 3,000,000; Kenora, 11,400,000; North Bay, 16,000,000; Parry Sound, 6,600,000; Peterboro, 1,000,000; Port Arthur, 10,000,000; Sarnia, 2,000,000; Waubaushene, 3,500,000. Among the more important increases were the following:—Biscotasing, 4,000,000; Bracebridge, 3,000,000; Byng Inlet, 38,000,000 (this mill having been out of commission on account of fire during 1913); Chapleau, 6,300,000; Cache Bay, 2,000,000; Lindsay, 2,000,000; Marksville, 3,700,000 (this being a new plant); Nesterville, 8,000,000; Otter Lake, 4,000,000; Owen Sound, 2,000,000; Severn, 6,700,000; Spragge, 4,000,000.

The majority of the reports received by the Canada Lumberman from manufacturing points in Ontario state that logging opefations this winter are being reduced to a great extent.

The decrease in operations this winter in Ontario applies practically to all districts with the exception of the Georgian Bay district. On account of the large quantities of timber which were blown down in the fall of 1913-14, the operations in this district will be much heavier than in former years according to reports which have been received from a number of the larger manufacturers. This excess of production is regretted by most of the manufacturers concerned, but is compulsory in order to save this large quantity of timber. To some extent, therefore, the increased output of the Georgian Bay district will offset the decrease in other districts. It is even reported, by the Department of Lands & Forests of the Province of Ontario that logging operations in the province generally this winter will be heavier than last winter. In a statement recently made public by Mr. Aubrey White, Deputy Minister of Lands & Forests, the production of pine logs on Crown lands this winter will be 375,000,000 feet. Last year the total was 360,000,000 feet. The cut of spruce is estimated at 18,000,000 feet, hemlock 27,000,000 and other varieties of timber 39,000,000 feet, a total of 84,000,000 feet, compared with an output of 65,000,000 feet in 1914. The estimated output of railway ties during the present winter is only about 1,000,000 pieces, whereas last year 6,000,000 were produced. This reduction is the result of the cutting down of railroad construction operations.

The output of pulpwood is expected to show a large increase on account of the greatly increased consumption of paper, particularly newsprint, since the commencement of the war. The cut of pulpwood on Crown lands during the present winter is estimated at 425,000 cords. Last year the cut was 131,000 cords.

## Ottawa Exports to the United States

The declared value of lumber exports, from Ottawa, to the United States during the calendar year 1914, as furnished by the United States Consul General's Office was as follows:—

| | |
|---|---|
| Rough lumber | $1,650,544 |
| Dressed | 137,371 |
| Dressed (Tongued and Grooved) | 19,054 |
| Lath | 79,727 |
| Pickets | 29,184 |
| Shingles (Cedar) | 30,348 |
| Pulpwood (Rossed) | 14,922 |
| Railway Ties | 2,707 |

# Ottawa Valley Lumber Production

### A Decrease of Over 81,000,000 Feet in the Production as Compared with 1913—Shingles and Lath also Show Decline

Ottawa, January 21 (Special to the Canada Lumberman): There were over 81,000,000 feet less of lumber cut in the Ottawa Valley in 1914—81,453,578 feet to be exact—than in 1913, or 119,121,779 feet less than in 1912. The comparative figures are 450,471,255 in 1914; 531,924,833 in 1913, and 569,593,034 in 1912. In the same district the lath and shingle productions were almost correspondingly less in comparison with the two previous years. In 1914 60,650,000 pieces of lath were cut as against 70,597,075 in 1913 and 97,781,475 in 1912; and in shingles the figures are :—33,000,000 for 1914 compared with 41,-170,000 for the year before and 65,805,000 two years ago.

These decreases both in 1914 and 1913 are not surprising in the least to lumbermen who are cognizant of the conditions that militated against the trade in the past two years. The year before last, money was exceptionally tight and the business world at large suffered in consequence. Last year dawned with indications that things would improve. It was not very far advanced however, before impediments, over which the lumbermen had no control, began to loom up in the Ottawa Valley. There was first, less than the average fall of snow during the latter part of the winter. Then followed a record dry spring, with the result that the water in the Ottawa and its tributaries became almost unprecedentedly low. By this time the mills in the district should have been operating to capacity, it was found difficult to get sufficient logs owing to the scarcity of water. Meanwhile the money market was not showing much improvement, but with characteristic optimism the lumbermen hoped for better things. Unfortunately the worst was yet to come. Early in the spring a big flume at the J. R. Booth plant gave way, which put the sawmills and the rest of the plant out of action for some time, and of course had an effect to a certain extent on neighboring plants. Shortly after this, the big timber mill at the same plant was burned down. These two accidents, linked with the low water in the river—the lowest at the end of the summer in the memory of any resident in the Ottawa Valley—resulted in Mr. Booth's mills being idle for more than half of the season, so that his lumber cut last year totalled only 37,000,000 feet as against 75,000,000 in 1913, and 80,000,000 in 1912.

The dry season was not alone wholly responsible for the recent lack of water in the Ottawa. It will be remembered that the Ontario Government's conservation dam at Lake Temiskaming broke away early in the summer and thereby let the reserve supply of water behind the dams into the river in the early summer instead of in the early fall. But it was on August 4th that the worst blow came—a blow that affected not only business in the Ottawa district, but all over the world. This was the declaration of war. The war cloud loomed up in the middle of July.

The outbreak of war sent ocean insurance on all cargoes up exceedingly high. Trade routes on the Atlantic and on other oceans too, were menaced. This, coupled with the taking over of several boats on the Canadian trade by the Dominion and British military and naval authorities, interfered seriously with the export of lumber to Britain and other countries distant from Canada. The political horoscope in the United States was not encouraging to lumbermen in that country to import from Canada on any large scale. Better things from south of the line are expected in the spring. Now that the Atlantic has been cleared of the German battle cruisers, and the Baltic and North Sea trade routes are not open very much, it is expected that there will be a demand for Canadian lumber from Britain and other European countries, especially in the medium and lower grades.

But to return to the figures of the cut for last year. In the appended list it will be seen that only six firms cut more last year than the year before. These are, The Fassett Lumber Company, of Fassett, Que.; Gillies Bros., Braeside, Ont.; Estate James Davidson, Ottawa; Dennis Canadian Company, Whitney, Ont.; the St. Lawrence Company, of South Lancaster, Ont., and M. Bertrand, Masham Mills. W. C. Edwards Company, of Ottawa, cut five million feet less. The Shepard and Morse Company cut about half of what they did in 1913. This was owing to the fact that they did not saw logs at Fraser and Company's mill last year, and owing also to the difficulty in getting logs to their mill through the lack of water, and the serious breakdown in their mill in August. Gilmour and Hughson, of Hull, Que., cut the same as last year.

In addition to the factors opposed to helping trade already mentioned, profits were less last year than they were for sometime previously. Prices were fairly firm, but demand was slow on account of both the export and local business being slack. In a word, trade was much less in 1914 than in previous years.

This year the lumbermen in this part of the country find they have large stocks on hand. Prices are not likely to vary much, unless conditions improve very considerably. As to the outlook for 1915 a diversity of opinion prevails, as the canvass made by the Canada Lum-

berman proves. Some predict a revival, while others do not look for any improvement until the war is over.

The cut of logs in the woods this winter will, it is estimated, run from 25 to 40 per cent. less than that of the previous season. This does not necessarily mean that there will be a falling off in the output of the mills next season, for, practically every lumberman has a big stock of logs in the water. When the war commenced, the prices of camp supplies went higher than they had been for years. It was soon realized that it would prove rather unprofitable to operate extensively in the woods, so only the number of camps deemed absolutely necessary were put in.

Labor throughout 1914 was plentiful at lower wages than had been paid in the three or four years before.

**Ottawa Valley Lumber Production**

## Banker's View of Ottawa Valley Trade

Mr. John Aird, assistant general manager of the Bank of Commerce, in a review of Canadian industry and trade during 1914, referred in the following manner to the lumbering operations of the Ottawa Valley:—

"The cut of lumber in the Ottawa Valley proper during 1914 is estimated to be 375 billion feet as against 475 billion feet for 1913; that is, about 100 million feet less. The shrinkage in the cut is in consequence of the low water in the Ottawa River and its tributaries, of which the Gatineau is the most important. The cut in the other lumbering districts of Ontario will probably show a somewhat larger percentage of decrease as compared with the year 1913. The manufacturers of the Ottawa Valley will, however, have some advantages over the manufacturers at other Ontario points. The latter are practically limited to the home market for their sales, whilst the former have now, and generally have had, not only the home markets but also those of Great Britain and the United States.

"The financial situation has caused a distinct falling off in the demand from the home market and not much change in the situation can be expected until there is a marked revival in Canadian industries and normal conditions are again established. The American market, too, has been affected in a somewhat similar way to our own, and since the commencement of the European war, shipments have been smaller. It is the opinion of the lumber people, however, that a revival of business in the United States will take place in the spring, when they look for distinctly better conditions. As to the markets of Great Britain, it is expected that the closing of the North Sea will shut out to a large extent the supplies which have been previously received from Russia, whilst shipments from Norway and Sweden must also necessarily be materially reduced. These conditions will doubtless bring about a considerable demand for the poorer and lower grades of spruce and white pine, rather than for deals and higher grade lumber.

"The prices of high-grade lumber during 1914 were considerably less than in the two preceding years, but the drop took place before the war and was largely due to the financial conditions in foreign countries. As to the future, we look for a reduction of 10 to 15 per cent. in the price of deals and of the higher grades of lumber. The cut of logs in the woods this winter will, it is estimated, run from 25 to 30 per cent. less than that of last year, but this will not necessarily mean a falling off in the output of the mills, as many concerns have large stocks of logs in the rivers. It is anticipated that the logs, and doubtless the lumber also, will be produced more cheaply this season than for several years previously."

## Reports from Ontario Manufacturers

The following paragraphs are taken from reports upon logging operations and market conditions which have been received from Ontario manufacturers.

We look for a moderate trade in lumber during the continuance of the war. When the war is over we expect a large demand. Free importation from the United States is the hardest thing the lumber manufacturer in Canada has to contend with today. Now that the country is in need of a war revenue, a duty of at least $2 per thousand feet should be imposed upon all foreign lumber marketed in Canada. Canadian lumber manufacturers should get together at once and see to it that competitive lumber from all foreign countries pays its share of our war tax. At present it is hard for us to say how our output of logs during this winter will compare with the previous winter. We think, however, that it will be from 75 per cent. to 100 per cent. of the 1913-14 output. During 1914 we sold more lumber in the United States than for some time past, on account of the light demand in Canada. Ordinarily we can sell in Canada all we can make, without seeking a foreign market. The demand for shingles and lath has been fairly good during the past year, although much less than in the previous year. We are carrying over larger stocks than a year ago because of our small cut in 1913, which was caused by a break in the cement dam as a result of which we had to carry over a large quantity of logs, some of which are still in the water. Stocks in the country generally are lighter than a year ago notwithstanding the small demand of the past six months. We sold elm, ash, maple and birch, at from $1 to $2 per M. less than in 1913. The best grades of shingles were lower this year and sold slowly. Our output of logs this winter will be less than last winter. We do not think the outlook for 1915 trade is good. Last year our volume of trade was less than in 1913, and it was unprofitable. Prices were lower in general. There was a good market for both shingles and lath.

We expect our log output this winter to be about 25 per cent. in excess of our last winter's cut, but this will depend, of course, upon weather conditions. Indications from the United States markets for 1915 are encouraging, but the general situation, of course, is very uncertain. The prices and demand for lath were exceptionally good during 1914.

Our output of logs this winter will be about 40 per cent. less than last winter. We think there is a fair outlook for trade in 1915. The demand from the United States is improving. Last year our volume of trade was greater than in 1913, but profits were on about the same level. Prices had a fair average during 1914. Our present stocks of lumber are larger than a year ago. The demand for lath last year was good.

Our log output this winter will be about the same as last winter. We expect that hemlock will be dull this year, but that it will remain at the same prices as during 1914, as very little stock is going out

and 1914 stock is in the hands of wholesalers who bought it at a high price.

We are taking out less than half as many logs this winter as last winter. So far, we think the outlook for trade this year is very good. Prices during 1914 were about $2 a thousand less than during 1913.

Our log output will be about forty per cent. less than last winter. We think the outlook for trade during 1915 is good for the low end and for lath. All our stock was sold at the close of the sawing season.

We will take out this winter about 35 per cent. of our cut in the previous winter. The outlook for 1915 is not very bright at present. Our trade is almost all cooperage stock, staves, hoops and heading. It is impossible to figure ahead until peace is declared.

Our output of logs this winter will be about 75 per cent. less than last winter. Prices of lumber last year were about $1 per M. lower than in the previous year.

We are taking out no logs this winter.

We will take out this winter about one-quarter of our cut in the previous winter.

Our log output this winter will be about 25 per cent. of that of last winter. Trade conditions ought to improve when the war has been successfully finished. Our profits last year were 15 per cent. less than during 1913. Prices were from $2 to $3 per thousand lower.

We are taking out very little stock this winter. We expect trade conditions to continue quiet until the war is satisfactorily concluded. We have much more unsold stock than a year ago. We found prices lower and the demand less during 1914 than during 1913 in all lines.

Our log output this winter will be about the same as last winter. Our stock of lumber today is 75 per cent. heavier than a year ago.

I am taking out no stock of logs this winter. After the war is over I think the trade will take a year to get back to normal. I have about one-third more lumber on hand today than a year ago.

We are taking out a smaller quantity of logs this winter than last winter, and are not looking forward to very heavy trade during 1915. Our stock of lumber is about 10 per cent. lower than a year ago.

This winter we are taking out about 30 per cent. of our last winter's cut.

We are not taking out any logs this winter. In our opinion trade conditions will remain as they are until a peace treaty is signed. Logging operations are being restricted because of the tightness of money. Profits were better during 1914 than during 1913, and logs were cheaper.

Our log output this winter will be 20 per cent. less than last winter. Our present stocks are larger than a year ago.

My log output this winter will be about 25 per cent. of that of last winter. In my opinion the outlook for trade is not good until the war is over.

I will take out about one-third less logs this winter than last winter. The outlook for 1915 is poor. I am carrying over about twice as large a stock of lumber this year as last year. Prices last year were about $2 per thousand less than in 1913.

Our output of logs this winter will only be about 10 per cent. of our output in the previous winter. We think that the outlook for trade is poor until Germany has been defeated. The trade in lath during 1914 was good. Our present stocks of lumber are about 50 per cent. heavier than a year ago. Prices last year were from $2 to $3 per thousand less than in 1913. The volume of trade was about 60 per cent. smaller than in the previous year.

Our output this winter will be very light.

We will take out no stock of logs this winter.

Our cut of logs will be about half as large this winter as last winter.

I will take out this winter about half as many logs as I did last winter.

Our output of logs during the present winter will be about 25 per cent. of last winter's output. Our stock of lumber on hand is much larger than a year ago.

We intend to take out a very much larger quantity of logs this winter than last. Owing to the present unsettled conditions it is hard to give an opinion regarding the situation during 1915. However, we are hoping that conditions will be nearer normal before the season is through, and that we will have a good trade. Our profits in 1914 were slightly greater than in 1913 and prices were a little higher. We have a larger stock of lumber on hand today than a year ago. The lath market during 1914 was very strong, but shipments fell off a little during the last few months of navigation.

Our log output this year will be about 60 per cent. less as compared with our output of last winter. Our volume of trade during 1914 was about 25 per cent. less than during 1913. Our profits varied from nothing to a fair amount. During 1914 spruce sold at about $18.50 per M. as against $20.50 in 1913, and the demand was poor, whereas in 1913 it was good. Lath were in good demand and shingles were slow during 1914.

Our log output this winter will be much smaller than last winter.

We will take out only half as many logs this winter as last winter. The outlook for 1915 trade is poor. We cannot see anything ahead in the lumber business until the farming community begins to buy agricultural implements, furniture, etc., and this will not commence until after another harvest, regardless of war conditions, and then the harvest must be a bumper one. We intend to go slowly. Last year we sold our stocks at an early date and the prices we obtained were as good as we obtained in 1913. We now have much larger stocks than we had a year ago.

We are not operating in the woods this winter.

We are taking out about about 40 per cent. less of logs this winter than last winter. During December, sales were better and enquiries more numerous, but buyers were looking for a cut in prices. We think that trade will brighten up again in the spring and, with the smaller cuts being taken out, prices will hold firm. During 1914 prices of lumber were about $1.50 per M. lower than during 1913.

Our log output this winter will show a decrease of 30 per cent. as compared with the previous winter. Our present stocks are more than three times as large as they were a year ago. Our volume of trade in 1914 was smaller and our profits were 25 per cent. less than in 1913.

We will not take out any logs during the present winter.

We will cut about two-thirds as many logs this winter as we did last winter. Trade conditions during 1915 may improve both in the United States and in Great Britain if the war is over by spring; otherwise we do not expect any improvement. Our volume of trade during 1914 was less than during 1913. Profits were about the same. Good lumber was lower about $3 per M. and the lower grades were higher last spring by about $2 per thousand.

We will take out about half as many logs this winter as last. The market for lath in 1914 was good. Shingles were slow. We obtained about $1 per M. more for our stocks in 1914 than in 1913 and we had a greater volume of trade, so that our profits were better.

We are not taking out any logs this winter.

Our log output this winter will be a little less than last winter. The export trade to the United States last year was about the same as in 1913. We did less trade and had smaller profits in 1914 than in 1913. High grade lumber was lower and the lower grades were higher. The lath market was good.

Our log output this winter will be about 75 per cent. of that of last winter. The outlook for 1915 trade is just fair. We expect that the demand will simply be for filling immediate requirements and that building operations will be slow. The volume of trade with us during 1914 was 50 per cent. less than during 1913 and there were no profits. Prices were about $2.50 per M. less than in 1913.

We are not doing any logging this winter. We think the outlook for 1915 is very poor. Our stock of lumber today is is 75 per cent. larger than a year ago. During 1914 prices were from $2 to $3 per M. lower than during 1913.

If the money market loosens up there will be a very good demand for spruce bill stuff during 1915. We are taking out about the same quantity of logs this winter as last. Stocks of lumber on hand are larger than a year ago.

Our log output this year will be about one-third of that of the previous winter. The demand from Great Britain is good, but we cannot get tonnage. We do not think the outlook for 1915 trade is very good.

We are taking out practically no logs this winter. We think the outlook for 1915 trade is very uncertain and we do not expect much improvement until the successful termination of the war.

We are taking out about 10 per cent. fewer logs this winter than last winter.

Our log output this winter will be about the same as last winter. Our stocks of lumber on hand today are about 35 per cent. greater than a year ago. The volume of 1914 trade was 40 per cent. less than 1913 and profits were about 15 per cent. less.

We are taking out a smaller quantity of logs this winter than last winter.

We are taking out no logs this winter.

I am taking out about two-thirds as many logs as last winter. I have much more custom sawing at mill and so will have a busy season. I also expect that tourists coming into this district during 1915 instead of going to Europe will cause a good local demand for

lumber. Many wholesale buyers are enquiring for stocks, but will not offer good prices, or promise to take prompt shipment.

The outlook for 1915 at present is not too good; but I hope for better conditions in the near future when the factories have cleared out their stocks. We are not taking out any logs this winter.

Our output this winter will be slightly increased as we are taking out a quantity of down timber. Prices of Norway pine and spruce during 1914 were from $1 to $3 per thousand lower than during 1913. We are carrying over about the same quantity of stock as we did a year ago. The market for good grades of lath during the early part of 1914 was good and the low grades were slow. We think the outlook for 1915 is fair.

Our cut of logs this winter will not be as large as last winter. The outlook for 1915 trade is uncertain. Lath and shingles are in a little better demand now.

In our opinion the outlook for 1915 trade is fair. We will take out fewer logs this winter. We did less business in 1914 than in 1913, but our profits were about the same. Our stocks are heavier than a year ago. We found the demand for shingles and lath poor during 1914.

Our log output this winter will be 10 per cent. greater than last winter. We think the outlook for 1915 trade is fair. Our present stocks are about 1,000,000 feet heavier than a year ago. Our 1914 profits were about the same as those of 1913.

Our log output this winter will be only 20 per cent. of last winter's. We are carrying over 1,500 feet more than we did a year ago.

We will only take out about 60 per cent. as many logs this winter as last winter. Our present stock of lumber is about 40 per cent. less than our stock was a year ago.

Our output of logs this winter will be only about 25 per cent. of the average quantity taken out in previous years. The volume of trade during 1914 was less than during 1913 and profits were slightly lower. Towards the end of the year prices were also lower. Our stock of lumber today is smaller than a year ago. We found a good demand for lath throughout the year.

We will take out only about half the quantity of logs that we took out last winter. We found prices of lumber lower during the last few months of 1914 and we now have about 25 per cent. more stock than a year ago. The trade in lath last year was good. We sold a little more lumber to the United States than in 1913.

## Have a "Feeling" That Trade Will be Good

Editor Canada Lumberman: Toronto, Jan. 5th.

The first half of 1914 was about average with us, that is, when we say average, it was about what it has been for the past six or seven years, which we considered very fair. Of course, there was a feeling during this time that in the Fall there was likely to be a slump in real estate, and it naturally made buyers a little careful. However, up to July 1st we had very little to complain of in the volume and also in the prices obtained. The indications for the second six months of the year, if taking the month of July's business would be any criterion, were good, as July was a really good month with us, but from the 1st of August until the end of the year, business was very slow indeed. So far as we can see, the retailers and manufacturers have been trying to lower their stock as much as possible, therefore, there have been small sales for the wholesaler, which naturally, falls back to the sawmill. We feel that if the war had not come upon us when it did, although the indications were that some slump would take place in real estate, not only in Toronto but throughout the Dominion, still, the trade would have been fair and stock would have been somewhat scarce for the next Spring's trade. However, there have been some fair sales made, and so far as we can see, stock is not overly plentiful, providing, there is any stir in the market in the coming Spring, which we have a feeling there will be. We are unable to give you any particular reasons why we feel this way, but are trying to content ourselves that such will be the case.—James G. Cane & Company

## A Spot Where the Sun is Shining

Editor Canada Lumberman: Stouffville, Ont., Jan. 10th.

Trade conditions were never better than they are at present in this locality. Of course prices are lower than formerly, but that only tends to loosen up the farmer who is the man with the ready cash at these times. We have more prospects ahead for building materials this winter than we had last winter, which was very good. Orders for spring delivery are coming in very nicely, and we look forward to good business from now on. To be caught up with orders is something we do not know, and while we do not employ very many men, we still have all hands at work.—D. M. Heise.

## Business Commencing to Improve

Editor Canada Lumberman: Buffalo, N.Y., Jan 5th.

A review of the past few months we do not think would interest anyone. We would have to go further back and that would be reminiscing.

It is indeed unfortunate that the whole globe is upset at the present time. We begin to feel, however, that it is settling down to a base from which we can find footing to start up again.

Business in the States is brightening up and we really are looking forward to good fair business throughout the year 1915, but trade through Ontario, we regret to say, still remains dull. We are hoping, however, that it will pick up, beginning very soon. We consider the present times warrant careful planning, plenty of backbone and confidence in one another.—New Ontario Colonization Company, Limited.

## Logging Operation Smaller in Northwestern Ontario

Editor Canada Lumberman:— For Frances, Ont., January 21st.

The lumber business has been rather dull since September last but most of the local lumbermen succeeded in disposing of their stocks at fair prices.

The logging has been exceptionally heavy in this district for a number of years past and a good many logs were left in the woods last year, so that, though only about half the camps are going in this year that there were last, the number of logs brought to the mills will average about the same as usual.

Prospects for the spring do not look very bright but the lumbermen are optimistic and will be in a position to take care of all orders.

The tie contractors all have camps in and several contractors have been signed up at slightly reduced prices.

There will be a large quantity of pulp wood cut this winter, most of it for local use at the Fort Frances Pulp & Paper Company, Limited, plant.—Russel Brothers.

## North Tonawanda Lumber Receipts During 1914

Receipts of lumber, etc., by vessel, at North Tonawanda, N. Y., during the navigation season of 1914, amounted to 184,018,400 feet. The season's receipts of all kinds were the smallest in 39 years. Of the lumber received 110,000,000 feet came from Duluth. The Canadian stock received totalled about 25,000,000 feet, which was one-third less than the amount received in 1913. In addition to the lumber the receipts included 80,000 cedar posts and 6,000,000 pieces of lath.

Receipts of lumber, etc., at Buffalo by vessel during the navigation season of 1914 were as follows:—Lumber, 69,957,000 feet; shingles, 625,721,000; lath, 878,000. For the 1913 season the receipts were: Lumber, 113,735,000; shingles, 710,677,000; lath, 2,079,000. There was thus a decline of about 40 per cent, in lumber, of about 12 per cent. in shingles and of 57 per cent. in lath.

## National Association Met the Strain Well

The official bulletin of the National Hardwood Lumber Association, for the month of January, 1915, contains the following reference to the present trade situation and the outlook:—

Nineteen-fourteen, the old, is gone and nineteen-fifteen, the new, stretches ahead. Watchman, what of it? Is it for better or for worse? The National Hardwood Lumber Association believes it has good reason to face the future with equanimity and confidence.

"The latter half of the old year carried a burden of a cast without precedent in the records of the world, and which still weighs heavily everywhere. As a result it has been necessary in the course of our work to deal with a good many new and formidable problems. In some markets local paralysis of the lumber trade has necessitated a prompt re-adjustment of the bearings of our Inspection Service in order to escape set inactivity and its consequent losses. There has been greater depletion in the ranks of membership through failures, withdrawals from business, and the stress and strain on individual finances than could possibly have occurred otherwise. For the same reasons prospects for new members have been fewer and these harder to convince. Then, too, the routine processes of business have been abnormally difficult, and especially so as applied to Association work. The making of a collection, for instance, frequently partaking of the nature of a surgical operation. Despite all this, the National Hardwood Lumber Association finds itself today as physically strong and as structurally sound as a year ago, while its potential financial condition is even better. Its Inspection Staff has been kept intact throughout, and since July 1, 1914, its inspectors have passed forward a total of 57,043,378 feet of hardwood lumber. During the same period forty-two new members have been added to the rolls. On January 1, 1915, the Association did not have a dollar of indebtedness, its bank balance was fully up to the normal mark and its gross assets stood at a higher figure than ever before. These are facts which are worth considering."

# Can You Supply Pit Props?

**ENGLAND CONSUMES 3,000,000 LOADS OF 40 CUBIC FEET EACH ANNUALLY, AND WANTS THEM NOW**

The report which was published in the Canada Lumberman of January 15th upon the demand for pit-props in Great Britain is probably of importance to many Canadian timber owners who can furnish such stocks. There is a demand in Great Britain today for large quantities of pit-props and there is an excellent prospect of any business which is secured during the progress of the war becoming permanent and resulting in an outlet for large quantities of this class of material, which will make it possible for manufacturers to conduct their operations in a more economical manner.

This pit-prop business is now offering. It is of large enough proportions to be exceptionally attractive. Its importance is so great that the consumers of pit-props in Great Britain took the trouble to send a commission to Canada to enquire into all available sources of supply in this country. Their report shows that Canada has an almost inexhaustable supply of pit-prop timber especially the maritime and eastern provinces, and that the working up of this trade is simply a question of cost.

Numerous enquiries upon this subject have been received by the Canada Lumberman, indicating that many manufacturers are ready to consider the business, but reports of actual contracts secured are very few. Does this mean that the manufacturers of Canada, after enquiring into the situation have concluded that the business will not be sufficiently profitable to make it interesting? It is not likely that this is the case. It is possible that one of the reasons is that manufacturers have not yet acquainted themselves sufficiently with the importance of this prospective market. **In order to get at the bottom of this matter we would like to have the names and addresses of manufacturers who are in a position to supply pit props, such as are required.**

The latest information available as to the quantities and dimensions of pit prop timbers required in Great Britain is published in a report just issued by the British Board of Agriculture and Fisheries, in the course of which the following appears:—

"In the extraction of coal large quantities of timber are employed for supporting the roof and sides of the excavations, as well as for tramway sleepers and many miscellaneous purposes. The average annual total coal production of the United Kingdom for the last few years is estimated at 265,000,000 tons, and the amount of pitwood used at approximately 4,500,000 tons, or 1.7 per cent. of the total weight of coal raised.

"The great bulk of the pitwood used in this country during normal times comes from abroad, the amount of the home supplies being probably not more than 20 per cent. of the total consumption. In recent years the quantity of pitwood imported has amounted to about 3,000,000 loads of 40 cubic feet per load. About 55 per cent. of the imports normally come from Russia, Sweden and Germany, 4 per cent. from Norway, and the remaining 41 per cent. from France, Portugal and Spain, the proportion varying a little from year to year; the imports from other countries have been relatively very small indeed.

Pitprops have been declared contraband of war by the German Government, and trade with the Baltic ports has consequently been seriously hampered. . . . .

### Type of Material Required

"The timbers chiefly in demand for pitwood are those which combine strength with lightness. Where the roof of the mine is dangerous, it is also of importance that the timbers should be of such a character that they give warning of impending movements by gradual fracture; brittle woods are in such cases unsuitable.

"As a result of experiments made by Professor Henry Louis at Armstrong College, it has been found that seasoned props have a distinct advantage in strength and durability over unseasoned props; no timber should, in fact, be used for pitprops while it still contains sap. The absence of large knots, or of even slight curves is also of importance, since when present they form points of weakness at which an otherwise sound prop readily gives way.

"The timber which comes from the North of Europe is either Scotch pine (redwood) or spruce (whitewood), and it reaches the mines in the form of clean, straight pieces, sawn into suitable lengths and devoid of bark. It is usually sold at a rate per hundred lineal feet, the price varying with the diameter of the props. The material from France and South Europe is maritime pine. In this case the timber is shipped in sawn lengths which are unpeeled, the larger sizes being sometimes rather rough from being subjected to the process of tapping for resin. This timber is used chiefly in the South Wales coalfields, where it is sold at a rate per ton.

"The three species mentioned in the preceding paragraph represent the bulk of the timber used for mining purposes, but are generally less esteemed than larch. Larch is stronger than any of the other three timbers, is more resistant to fungus attacks and consequently better suited for permanent work, but is, on the other hand, more expensive.

### Dimensions Required

"The extreme diameters of poles used as pitwood are 2-in. and 13-in., but, although a good deal of slender timber is used in some districts and large timber in others, it may be said that as a general rule the minimum diameter of timber for which there is any considerable demand is 3-in., and that it is only in exceptional localities, e.g., ironstone mines, that poles of a greater diameter than 6 in. are used to any considerable extent.

"Pit timber is used in lengths ranging from 1 1/3 ft. to 18 ft. As a general rule the length varies with the diameter in the ratio of approximately one foot to one inch.

"The sizes in greatest demand in various localities are set out in some detail below. It may be stated briefly that in coal-mining districts the greatest demand is for timber 3 ft. to 6 ft. long, although there is considerable demand for lengths as small as 2½ ft. and as large as 7 ft."

**Dimensions Chiefly in Demand in the Principal Coal and Iron-Mining Districts in England and Wales**

| | Diameter (in.) | Length (ft.) |
|---|---|---|
| North of England (Tyne District) | 3 | 3-4 |
| Cumberland | 2½-4 | 2-5½ |
| *Yorkshire (Cleveland) Baulks | 6-9½ | 10-18 |
| *Yorkshire (Cleveland) Props | 5½-9 | 6-15 |
| West Yorkshire | 4½-5½ | 3-6 |
| South Yorkshire | 2-8 | 2½-9 |
| Lancashire and Cheshire | 2-7 | 2-7 |
| Midland Counties (Derby, Leicester and Notts.) | 3-8 | 3-9 |
| South Derbyshire | 4-6 | 3¼-6½ |
| Nottinghamshire and Erewash Valley | 6 | 6-7 |
| Leicestershire | 5-6 | 3½-6½ |
| North Staffordshire | 5-6 | 6 |
| Cannock Chase | 5-6 | 5-7 |
| South Staffordshire and East Worcestershire | 4-8 | 5-6½ |
| Warwickshire | 5-6 | 5-6½ |
| Shropshire | 3-6 | 2¼-6 |
| North Wales | 3-6 | 3-7 |
| South Wales and Monmouthshire | 4½-5 | 6-9 |
| Forest of Dean | 3-6 | 3½-6½ |
| Somerset | 2-10 | 1½-10 |

*Ironstone Mining.

## Railroad Construction in 1914

The year 1914 was away below the average, in the matter of new railway construction in the United States, while the three years previous were also away below the average yearly construction of many past years. However, 1914 construction made the poorest showing of all. Railway construction in the United States for 1911, 1912, and 1913 was practically the same for each year. The 1914 construction was less than half of that of 1913.

The Canadian construction of 1914 was in excess of that of the United States for the same year, and for Canada it can be said that in only 1913 has the 1914 record of new construction been beaten since 1900.

The statistics show a total construction in the United States of main lines, second tracks and long sidings of 2,127.22 miles, for 1914, as against 4,366.63 miles in 1913. The Canadian onstruction for 1914 amounted to 2,130.57 miles, while that for 1913 was 3,366.20 miles.

The close of the year in the United States finds 1.015 miles of first or main line track under construction and uncompleted, with surveys made for 1,229 miles of new lines and 2,031 of projected lines. The same for Canada finds 465 miles of new track under construction, with surveys made for 2,127 additional miles and 80 miles of projected railway.

The amount of orders being placed for new equipment at the beginning of the year 1915, is in excess of what it was far 1914 or any past year since 1911. Several of the leading railway systems are also planning much in the way of double tracking of main lines and if the plans are carried out, it is possible for the record of 1915 to equal if not surpass the best made during recent years.

# Important New Plant at Chandler, P.Q.

## Sawmill With Capacity of 125,000 feet per day and a 110 ton Sulphite Pulp Mill Erected by St. Lawrence Pulp & Lumber Corporation, Limited

SOME time in the month of March of this year one of the most complete sawmills and sulphite pulp mills in Canada will commence operations. This is the plant of the St. Lawrence Pulp and Lumber Corporation, Limited, situated at Chandler, P.Q., on a bay of the Gaspe Peninsula. The buildings are now practically finished, having been constructed by the Aberthaw Construction Company, of Boston. The capital is entirely American, and the promoters have spared no money in securing the very latest form of mills and equipment; the plant is, in fact, the last word in saw and pulp mill construction and practice. It comprises nearly twenty buildings, with arrangements for a further extension of several of them, should occasion arise.

The limits, of 640 square miles, and an old mill, were purchased from the Grand Pabos Lumber Company, owned by American capitalists. The limits comprise balsam and spruce, with a little birch and cedar. The mills will have excellent shipping facilities, by rail and water; transportation by rail is obtained by the company's own double track line running right through the plant, connecting with the Atlantic, Quebec and Western Railway, which has connection with the Intercolonial, while, to facilitate shipping by water, the Federal Government will build a deep water wharf, 1,500 feet long, giving 27 feet of water at low tide.

The plant, which covers, together with the lumber yards, about 16 acres, is separated into two parts, one comprising the saw mill, rossing mill, and hot pond, and the other the pulp mill, offices, boiler rooms, etc. The saw mill is 64 feet by 193 feet, and has a capacity of from 100,000 to 125,000 feet per day. It is equipped with a gang saw, two circular saws, both with steam feed, two edgers and two resaws. The mill is also equipped with two log jacks, one for summer and the other for winter; the summer jack connects with the main pond, in the Bay, and the winter one with the hot pond. There are the usual number of live rolls for cenveying the lumber from the saws to the transfer tables, where the lumber is placed on trucks, and transferred by a small Dake engine to the yard line. From here the lumber is sent to the piling yards, which have a capacity of from 40,000,000 to 50,000,000 feet, by overhead trestles. The method of transferring the trucks by a Dake engine is very economical, as one boy can take care of the entire day's output.

### Equipment of the Sawmill

The log haul is at the south end of the mill. From it, corrugated rolls convey the logs to the double log deck, which is equipped with steam flippers which throw the logs to right or left, the long logs being handled on the west side of the mill, the short logs on the east side. The log deck is also equipped with transfer chains and 3-arm steam loaders to transfer the logs to the carriages. A steam nigger operates before each carriage. The west side carriage has three blocks with 36-in. opening, and a one-block trailer for handling logs up to 53 feet long. The east side carriage is 36-in. opening, three block. Both carriages are provided with Waterous No. 4 Combination Setworks and Receder, and Waterous Steam Setter. They are operated by steam feed. The circular saws on both sides of the mill slab for the gang unless dimension stock is being cut.

Immediately back of the saw frames, chain transfers convey the cants from either side of the mill to the gang, which stands in the centre of the mill floor. The slabs from the saw frames are carried by live rolls toward the rear of the mill where they are handled by circular resaws, one on each side of the mill. After being re-sawn, the lumber is automatically carried forward and transferred to the edgers,

Interior of sawmill of St. Lawrence Pulp & Lumber Corporation, Limited, Chandler, P. Q.

the slabs being forwarded and dropped on the transfer chains which carry them through a four-saw slab slasher and from there to the picking conveyor.

The lumber from the gang is carried by a series of live rolls, and by board flipper and roller transfers is delivered to either or both edgers. Here it meets the boards to be edged which have been transferred from the resaws. The finished boards from the edgers and from the gang are conveyed by live rolls to the trimmer transfer at the rear of the mill and from there are conveyed to the two-saw trimmer and the sorting table.

The slabs and refuse are passed through two large hogs, part of the refuse being conveyed across the mill below the machinery floor to be burned in the boilers of the sawmill power plant, the remainder being used in the power plant for the sulphite mill.

In the boiler room five horizontal return tubular boilers 72 in. by 18 ft. are set in two batteries. These boilers are provided with steel plate Dutch ovens and are suspended in steel settings.

A Waterous Twin 18 x 24 Side Crank Mill Engine, placed in a separate building, operates the entire sawmill machinery with the exception of the vertical gang which is driven by a separate engine.

The greater part of the sawmill equipment was supplied by the Waterous Engine Works Company, Limited, of Brantford, Canada, who also designed and superintended the erection of the sawmill and the power plant. The gang saw was manufactured by Wickes Bros., Saginaw, Mich.

The rossing mill is adjacent to the sawmill, and is a two-storey building. The logs are conveyed by a haul to the mill, rossed and chipped, and then sent on a conveyer belt across the railway track to the pulp mill. The rossing machinery was supplied by the Waterous Engine Works Company, Limited.

A shingle mill is situated across the log pond some distance from the rest of the plant, and was originally the old rossing mill of the Grand Pabos Lumber Company. It has ten Dunbar machines, which will turn out 100,000 shingles per day.

### Hot Pond Provides for Winter Operation

The hot pond is 90 x 160 feet, and is located just south of the railroad tracks. It is separated from the bay by a bulkhead, so that, during the winter logs can be handled without danger of being frozen up. Hot water is supplied from the boiler room and the exhaust, the temperature being kept up by the supply from the condensers.

One of the most interesting features of the operations is the method of transporting the logs from the limits. There is a lack of stream flow in the Gaspe peninsula, and this is unfavorable to the economical driving of logs, while it also leaves untouched many large areas of spruce and balsam. In order, therefore, to secure regular means of supplying the mills it was decided to lay down railway tracks to various portions of the limits. Twenty-one miles have been constructed, the main lines having spurs which radiate at the required points. When the limits have been cut in one district, the lines can be taken up and relaid in other sections. Owing to the peculiar formation of the land and the various gullies, the limits are specially favorable to this method of shipping the lumber; without it, it would be economically impossible to deal with certain parts of the limits. At present, each line taps the limits within a radius of nine miles. A Montreal Locomotive engine of the Mogul type, with side rod, of 90 tons, two Shay engines of 70 tons each, 30 steel logging cars (to be increased by 50), a snow plough and five ordinary cars comprise the equipment. There are four streams on the limits, and these are also used for driving logs; two empty into the bay at Chandler, one a few miles below, and one at Port Daniel, 16 miles above.

### The Sulphite Pulp Mill

The pulp mill is by far the largest portion of the plant, and will have a capacity of from 100 to 110 tons of sulphite pulp per day. Starting from the west end of the layout there is a pulp storage building, 78 x 162 feet, which has a platform upon a railroad siding alongside the double track road. Near this is a building, 78 x 231 feet, used as offices and as a supplies and repair shop. This building also contains a bleacher room, 200 x 78 feet, with nine large concrete bleacher tubs. South of the bleacher room is the machine room, 49 x 269 feet, while east of the latter is the screen room, 150 x 156 feet, divided into two parts, with coarse screens in the southerly section, and fine screens to the north. Next are the four blow pits, 67½ x 81 feet; each pit measures 18 ft. 6 in. by 52 ft., with a depth of 16 ft. 8 in. at one end and 15 ft. 2 in. at the other.

The digester house, to the north, is 35 x 81 ft. and contains four digesters, 16 ft. in diameter by 54 ft. 6 in. high. These are fed by a conveyor in the monitor on top of the buildings. The acid plant is 57 x 58½ ft. It is proposed to install an electrolytic plant at some future date. Between the site of this plant and the digester house is the filter building, 60 x 73 feet, with provision for expansion northward as may be necessary. The power building is east of the main group, and consists of a turbine room 72 x 78 ft., and a boiler room 72 x 164½ ft. Power is furnished by four batteries of boilers of 950 h.p. each, manufactured by the Edgemoor Iron Company, which operate steam turbines, there being provision made for installing a fifth battery. All the water required—about ten million gallons per day—will be pumped from the North River and conveyed 1½ miles by means of pipes. It is proposed to generate all the electricity required for running the plant and for lighting purposes, the Canadian Crocker Wheeler Company, of St. Catharines, Ont., supplying the electrical equipment.

The waste wood, sawdust, is collected and conveyed by a system of belt elevators to the boiler house, where it is used to supplement the coal. The refuse consists not only of the wood room waste, but also of the sawmill waste.

### A New Town Created

The erection of the plant has resulted in the establishment of a new town, which has been laid out by Mr. C. Allbright, of Philadelphia. The company have built about fifty houses, another 125 have been constructed by private owners, while there are 25 stores and a moving picture theatre. The company are the owners of a general store.

The saw mill, shingle mill, yards, and railway were designed by Mr. H. W. Racey, who has just resigned as general manager, but still remains in a consultative capacity with Messrs. Chandler Bros. & Company, the bankers and promoters; Mr. H. S. Ferguson, of New York, designed the pulp mill, Mr. E. W. Prouty being the resident engineer. Mr. J. Henderson was the superintendent for the construction company while Mr. J. E. Hamel, of the Waterous Engine Works Company, was construction superintendent of the saw mill. Mr. Gustave Hansen is pulp mill superintendent; Mr. E. J. Dallaire mill superintendent, and Mr. F. E. Campion bush superintendent.

The plant is equipped throughout with the Manufacturers' Automatic Sprinkler System, supplied and installed by the General Fire Equipment Company, Ltd., of Toronto. This equipment consists of 2,500 automatic sprinklers arranged and spaced according to the latest insurance rules; two 1,000 gallon underwriters' fire pumps which force the water through an extensive hydrant system, and branches from that through various buildings, each building being separately controlled. Supplementing this is an auxiliary supply 40,000 gallon tank on a trestle, the bottom of which is 25 ft. higher than the highest building.

---

## A Review of Montreal Exports

An interesting commercial review of the season ending December 4th, 1914, showing the export trade from the port of Montreal in Canadian products has been compiled and published by the Commercial Department of the Montreal Gazette. The book contains a number of interesting illustrations and many valuable articles. Referring to the timber and deal exports of Montreal, the report says:—

"The early arrival of cold weather and snow has restricted building operations which were already greatly curtailed by the general business situation. A fair amount of business, however, is reported by several wholesalers and there is a rather general feeling that, at the beginning of next season, trade will revive considerably. Shipments of spruce and birch to the Old Country continue on a small scale, but very little pine is going forward. Freight rates for lumber are high, the increase since the beginning of the season being from 33s 9d to 60s and as high as 65s per standard. The total exports from Montreal will show a large decrease this year. In the St. Maurice Valley district it is expected that the cut this season will be about the same as last season. Practically all the mills in the Three Rivers district are closed and there are still many logs in the rivers.

"No important changes are reported from St. John, N.B. Indications are that all low grade stocks of rough lumber and much of the merchantable rough stocks will be used up by next spring. There will be from 18,000,000 to 20,000,000 feet of logs carried over the winter at St. John for spring sawing, mostly long logs for American stocks. Prices for English deals continue very firm.

"Owing to the European war and the great scarcity of ocean freight space the export trade in this department from the port of Montreal has been the smallest for some years past."

---

## Quebec Cullers' Annual Report

The following comparative statement of timber measured and culled to date at Quebec, is furnished by the Supervisor of Cullers' Office, Quebec, P.Q.

| | 1912 cu. ft. | 1913 cu. ft. | 1914 cu. ft. |
|---|---|---|---|
| Waney white pine | 1,172,720 | 244,280 | 599,800 |
| White pine | 1,760 | 7,560 | ..... |
| Red pine | 12,200 | 960 | 1,040 |
| Oak | 113,840 | 177,240 | 343,480 |
| Elm | 313,640 | 284,880 | 305,760 |
| Ash | 520 | 1,000 | 680 |
| Birch and Maple | 42,920 | 47,680 | 50,800 |

# Review of New Brunswick Trade in 1914

## A Fairly Profitable Year for Mills Sawing English Deals—Good Prices and No Labor Troubles—American Market Poor

Probably the year 1914 will go down in the history of the port of St. John, N.B., as one of the most profitable for the sawmills which had sufficient provincial logs to keep them running throughout the season. Very few of the mills, however, were able to make a complete and full season, on account of the shortage of logs. Just why all the mills did not have plenty of logs to make a full season's sawing, is hard to say; but a year ago, in the fall and winter, men for the woods were hard to get, wages were very high and the mills at St. John, having been tied up with a strike all summer until about October first, and then starting off when the owners least expected, left the mill owners with no chance to plan in the early fall how many logs they would cut for 1914. When the men did not go back to work until October, it was too late to make a good start, as the best yarding season in the northern woods starts with early fall and many plans must be laid before this work is begun. Therefore, instead of having a new cut of one hundred millions of logs, only fifty-five million came through the booms in 1914.

Taking as a basis two hundred days, which is about the average open sawing season at St. John, the mills would cut out the following:

| | |
|---|---|
| Messrs. Stetson, Cutler & Co., two mills | 27 to 30 million feet |
| Chas. Miller | 9 to 10 million feet |
| Randolph and Baker | 18 to 20 million feet |
| Murray and Gregory | 13 to 14 million feet |
| Warner & Company | 8 to 10 million feet |
| Miller, Moore & Company, and J. E. Moore & Company (Three mills) | 24 to 25 million feet |
| Sayre & Company | 3 to 4 million feet |

Or a total of from 102 to 113 million feet of logs.

Messrs. Stetson, Cutler & Company as a rule run well into the winter and sometimes all winter and would increase this cutting to 125 to 130 million feet. This year there was a shortage of about 25 million feet of logs, and therefore many mills did not make a full season. Randolph & Baker finished very early in the fall, as did Sayre & Company. Messrs. Stetson, Cutler & Company, Warner & Company, and Murray & Gregory, with one of the J. E. Moore mills, were the only ones to complete a fair year's sawing, finishing about Christmas time. Therefore, as far as the sawing season was concerned, it was not an ordinary one, but fell below the average at least 25 per cent. A few logs are being held over, about 15 million. These are all in the hands of Stetson, Cutler & Company. This quantity of held-over logs is much below the average, and, had Messrs. Stetson, Cutler & Company known early in the season that the English deal market would have improved as it has, they would probably have piled these logs and sawn them up this winter.

The cut of logs for 1915, to come through the booms will probably be about 70 million for St. John, made up about as follows:

| | Feet |
|---|---|
| Stetson, Cutler & Company | 26,000,000 |
| Murray & Gregory | 14,000,000 |
| J. E. Moore & Company | 12,000,000 |
| Randolph & Baker | 13,000,000 |
| Chas. Miller | 4,000,000 |
| F. E. Sayre & Company | 1,000,000 |
| Total | 70,000,000 |

besides which there will be about 10 million feet from below Fredericton in the lower country, which, with 15 million held over will make a total of from 95 to 100 million feet for sawing next season.

Up to date, it has been one of the best seasons for getting logs, as the swamps all over the country are well frozen. Snow delayed in coming and gave the operators a fine chance to yard up their logs. Of course, all depends on the spring driving as to just how many logs will come out.

### English Deals in Strong Demand

As we said before, it has been a fairly profitable year for the mills sawing English deals, prices for which were pretty good, starting last February, when the mills sold out at $17.50 per M. for specifications 50 to 60 per cent. 7 x 8 x 3 in., balance 9 in. and up, with scantlings at the price of about $15 per M. No labor troubles came to mar the season, and men worked well, the best of good feeling having come to both operators and men. It is to be hoped, if the mill business is to continue at St. John, that this same spirit will predominate. All through the summer these prices held, and after the war broke out prices took a further rise, until today, persons who have deals for sale can get about $20 per M. and $18 per M. for the scantlings. These are the highest prices ever paid for deals in the history of the business. Of course, it is all the outcome of the war. The admiralty are calling for the stock for repair work and they must have it at any cost.

Local business was good all through the season. A lull came at the start of the war, but during the fall a fair trade continued and this season's reports show an increase over last in local sales. At the present time the whole bottom has dropped from under local business but this is nothing more than is expected at this time of year. Of course, it is furthr aggravated by the war troubles. Prices for local goods remained firm all season. Refuse of all kinds was selling from yards at about $12 per M. all around.

### Present Stocks of Deals Light

Stocks of deals at the mills at St. John are not heavy. There would be very little stock now on hand had tonnage been available to carry it, but that has been, and is, the most serious trouble which the shippers are finding. From early in the fall to the present time vessel after vessel which was to come to this port to load has been cancelled and taken for transport work, leaving the shippers in a bad fix. Freights have advanced from 50s. two months ago, until today 100s. is being offered with little or no space at that price. About seven to eight million feet of deals are on the mill wharves for shipment. This is only a fair stock compared with former years. With no mills going at the port, and any space offering at all, by spring not a deal will remain.

Laths and boards, which both go to the American market, have been the only stocks which have slumped. These have been in demand only at bargain prices since the early fall. Today, very few buyers can be found willing to pay a profitable price for these stocks. Large quantities of both are on hand and are held largely in the hands of speculators, especially the laths. Many of the mills sold these cuts of laths at from $2.75 to $2.85 per M. on the wharves for summer season in the early year. These prices left a profit for the buyer when shipped, but since August this has not been the case.

Shingles have come through the poorest season for some years and to-day it is almost impossible to find a buyer who will pay the prices asked. While stocks are not heavy here, elsewhere in the east they are extremely heavy, but very little cedar is being cut in the woods this winter and stocks to be manufactured next year should show a tremendous reduction. Town after town is extending its fire districts against shingles. This is one of the greatest causes for the slump, the people being forced to stop using them. While the business was good a few years ago many mill operators added machines to their mills, increasing the output very much, and, of course, this heavy output, with a great reduction in the use of the material, has caused heavy stocks and low prices.

### 1915 a Difficult Year to Forecast

What the new year may bring to the lumber manufacturer of the east is hard to say. It is not an ordinary year which he faces, but a very complex one, and which way to move for the best he does not know. Logs will cost him as much, if not more, than formerly, as supplies are very much higher than before. Labor in the woods is much poorer in quality than before. Seemingly it is growing poorer year by year and wages are increasing. While the English buyers are paying high prices for immediate delivery, they are not gambling to any great extent on the season to come, and not many sales have taken place for next year. In many cases the lumberman thinks this is a year to wait, as prices seem to be soaring. One week he hears of a sale, the next week of a higher one, and so on; which keeps him guessing. He feels that he wants as much as his neighbor and also, if the war should continue, with the Baltic ports closed, no deals can reach England from that source, which has been our greatest competitor and a growing one for some years. Also, with the destruction that is going on, and which will take place, a demand for lumber must be created, and we cannot see why good prices will not continue.

As to the United States market, there is really no practical change. There is talk, but when one tries to sell, it is quite a different matter. About all the American two-inch and such sizes are going to the English market, and all the mills here, both American and Canadian, will undoubtedly saw English deals on the opening of navigation, unless some great change takes place. This should have a stiffening tendency on this market.

No sales of laths have yet taken place for 1915 cuts. Three dollars is the asking price.

Locally, the outlook for 1915 is not promising. No large buildings of any kind are being promoted and people are simply holding on to what they have and awaiting developments.

It is reported that Messrs. Randolph & Baker will place a band mill in one of their mills at St. John, taking out an old live gang mill, and replacing it with the band. All other mills are under repairs.

## New Brunswick Exports Decreased

The exports of lumber from St. John to transatlantic ports last year amounted to 84,027,826 superficial feet of spruce, and 7,651,181 superficial feet of birch plank with 1,411 tons birch timber, compared with 80,714,861 superficial feet spruce, 5,823,761 superficial feet birch plank, and 2,307 tons birch timber in 1913.

The following table gives the shipments from New Brunswick ports during the last three years.

| Port | 1912. Ft. | 1913. Ft. | 1914. Ft. |
|---|---|---|---|
| St. John | 76,846,726 | 80,714,861 | 84,027,826 |
| Dalhousie | 15,909,671 | 16,000,000 | 12,000,000 |
| Bathurst | 7,615,378 | ..... | ..... |
| Newcastle | 33,494,529 | 22,103,758 | 26,126,424 |
| Chatham | 45,623,040 | 52,384,955 | 35,945,187 |
| Richibucto | ..... | 1,594,990 | ..... |
| Buctouche | 287,556 | ..... | 253,354 |
| Campbellton | 35,152,226 | 54,351,943 | 37,370,151 |
| Out Ports of Sackville | ..... | 8,527,876 | ..... |
| Sackville | ..... | ..... | 392,198 |
| Albert | ..... | 15,669,408 | ..... |
| Shediac | ..... | 3,792,069 | ..... |

Four years ago the total exports from the Province to trans-Atlantic ports amounted to over 280,000,000 feet compared with less than 200,000,000 feet this year. The names of the shippers from St. John last year, with the amounts of spruce lumber shipped were as follows:

| | 1913. | 1914. |
|---|---|---|
| W. Malcom MacKay | 32,668,873 | 37,703,517 |
| J. E. Moore & Co. | 22,868,067 | 19,548,966 |
| George McKean | 17,943,693 | 22,417,059 |
| Other shippers | 7,234,228 | 4,358,284 |

The exports of lumber, pulp and pulpwood to the United States last year showed a slight decline in value over those for 1913. The statement by quarters follows:

| | 1913. | 1914. |
|---|---|---|
| First quarter | $ 297,539.34 | $ 195,255.95 |
| Second quarter | 452,141.61 | 531,509.33 |
| Third quarter | 405,647.40 | 539,876.41 |
| Last quarter | 370,140.24 | 203,388.41 |
| Totals | $1,525,468.59 | $1,470,030.10 |

The following is a statement of the items and their values for the last quarter:

| | |
|---|---|
| Lumber | $58,489.59 |
| Wood pulp | 89,968.95 |
| Pulpwood | 13,284.00 |
| Lath | 25,114.33 |
| Pine boards | 9,002.25 |
| Shingles | 7,093.20 |
| Staves | 436.09 |

The following table shows the destination of the St. John trans-Atlantic shipments during the past three years.

| Ports | 1912. Deals Ft. | 1913. Deals Ft. | 1914. Deals Ft. |
|---|---|---|---|
| Liverpool | 19,178,393 | 16,885,275 | 12,203,237 |
| Manchester | 25,832,652 | 21,218,201 | 14,889,863 |
| London | 14,725,768 | 15,273,694 | 15,883,968 |
| Glasgow | 3,899,740 | 10,161,757 | 13,800,737 |
| Sharpness | ..... | 3,693,560 | 2,035,221 |
| Cardiff | 322,050 | ..... | 1,514,721 |
| Newport | ..... | 2,925,286 | 3,085,927 |
| Swansea | 2,690,420 | ..... | 2,384,957 |

| Llanelly | ..... | ..... | 668,811 |

## Shingle Association Had a Good Year

The annual meeting of the North Shore Shingle Association was held at Bathurst, N.B., recently, and was well attended, practically all the shingle mills of Eastern Canada from Chatham to Gaspe being represented. The executive elected for the ensuing year was as follows:—Angus McLean, Bathurst Lumber Co., President; W. F. Napier, Shives Lumber Co.; D. E. Richards, Richards Mfg. Co.; R. B. Ross, Forest Reserve Pulp & Paper Co.; W. P. Eaton, Miramichi Lumber Company, and F. E. Blackhall, Secretary-treasurer.

The North Shore Shingle Association was formed early in 1912 so that this meeting was the third annual and afforded a good opportunity to compare records and note results.

Each year has shown marked improvement both as to volume and quality of business handled, and notwihtstanding the money stringency that prevailed during the latter part of last year, sales kept up as usual and collections were excellent.

The total output of the mills forming this association reached approximately 250,000,000 shingles during the season.

The value would approach $600,000 at the mills.

The stocks at most of the mills were pretty well cleaned up, except where winter sawing is being done. In these cases the wintered stock is greatly appreciated by the trade as it enables them to take care of early demand in the spring before the mills start.

The demand for extras has been exceedingly good so that there is but little of this grade to carry over.

The demand for second clears usually exceeds the quantity turned out. The past season has been no exception in this regard. Since the association was formed, standard grading rules have been adopted and the quality of shingles at association mills has been much improved.

Along with uniform quality, uniform prices and terms have been maintained and with such large supply to draw from the mills are in a much better position to handle large contracts promptly. This is something that is appreciated by large buyers.

Considerable publicity in the way of newspaper advertising will be done during 1915 as the association feel that the merits of white cedar shingles should be placed before the consumers. Particular buyers all over Canada as far west as Ontario and over the eastern States insist on New Brunswick or eastern Quebec white cedar shingles, but at the same time they specify well-known brands that they know to be well manufactured.

In regard to the output for 1915 it will be fully up to, or exceed that of 1914 and stocks in dealers' hands are practically nil. Stocks at the mills are lower than they were this time a year ago so that, taking the situation altogether, things should work out pretty satisfactorily during the season of 1915.

## Reports from New Brunswick Manufacturers

The following paragraphs are taken from reports received from New Brunswick manufacturers:—

We are taking out about 10 per cent. more logs this winter than last winter. The outlook for trade during 1915 is good. The demand from the English market is the best that it has been in years. The United States market must respond or go without Canadian lumber. Prices last year averaged from 5 to 10 per cent. less than during 1913 and profits showed a reduction of about 20 per cent.

Our log output this winter will be much larger than in previous years. The outlook for 1915 is good.

Our log output this winter will be the same as last winter. The outlook for the lumber business during 1915 is exceptionally good. Lumber and shingles are rather dubious. The trade with Great Britain last year was excellent, but that with the United States was very bad. Profits last year on long lumber were better than in 1913 and on short lumber they were poorer.

We will take but 20 per cent. more logs this winter than last winter. The market in Great Britain during 1915 will depend entirely upon the war situation. The prospects in connection with the United States market are that prices will be low. Our profits last year were about the same as in 1913.

Our log output this winter will be about 90 per cent. of that of the previous winter. The outlook for 1915 is favorable at present for shipments to Great Britain. United States and western Canada markets are weak. Profits in 1914 were about the same as in 1913. Prices were probably 10 per cent. better. Our stocks now are a little lower than a year ago.

We will take out twice as many logs this winter as last winter. We consider the outlook for 1915 pretty good. The market in Great Britain last year was characterized by increasing values and the United States market was a weakening one. Our profits were better for 1914 than for 1913 and the volume of our trade was greater. Long lumber was 50c per thousand higher. Laths were 15c per M. better, but shingles were not so good.

# Trade of Quebec Province During 1914

## Large Decrease in Exports to Great Britain—High Freights and Scarcity of Vessels Prevented Shipments—Paper and Pulp Benefitted by War

Montreal, January 25th (Special to the Canada Lumberman):—The past year was an unsatisfactory one for the lumber trade. The home demand fell away and the foreign business was hampered by a number of handicaps. The war was responsible for a great deal of the depression, but the set-back was not wholly due to this cause. The collapse of the real estate boom accompanied by tight money was a strong factor in the compartive decline of trade during the early part of the year. It was not, however, until the war commenced, that business became really dull. Up to that time, orders were fair, with a tendency to decrease gradually. The cities felt the brunt of the smaller turnover, the towns and villages, owing to a bountiful harvest and good prices, being in a better position to bear the burden. In the cities, many large industrial plants, such as those building cars, which were large consumers of lumber, were practically bare of orders, which naturally had a bearing upon the lumber trade.

There were complaints during the year of the dumping of the lower grades of Georgia pine. Wholesalers now state that this has practically ceased, owing to the lumber being found unsuitable for this market, and to the fact that although low in price it was relatively dear, when its poor quality was taken into account.

The New York market was a good buyer, especially of spruce, during the first four months, but then it fell away.

The dullness spread to the production of pulpwood, following the smaller demand from the United States, where the paper mills were free buyers of pulp in place of the wood. A considerable amount of wood is still on hand throughout Quebec, and there is likely to be a diminution in this winter's cut as a consequence.

During the latter part of the year the position of spruce underwent a change. Quite a strong demand for the English market set in, and after the close of navigation, in spite of the high freights, a considerable quantity of lumber was shipped to the other side. The shutting off of European supplies was the cause of this buying. Several mills have already sold their entire cut for the English market at prices which show a substantial advance. It is probable that a slightly lower grade of lumber will be sent to the Old Country. This buying will mean a more limited supply for home consumption and will also have an influence in keeping prices strong.

### How Local Trade was Affected

Almost throughout the year the local trade compared unfavorably with the preceding twelve months. This was due to the slump in the contracting business, naturally accentuated by war conditions. In spite, however, of the small buying, prices were maintained in a surprising manner. The opening months were fairly satisfactory, considering the reaction in general commerce, but at no time was there anything approaching briskness. It was seen early in the year that several contemplated large building projects would be laid up, owing to the financial position, although there was a decided increase in the number of flats and small residences constructed. How serious was the decline in building operations will be gathered from the city permits issued. In 1914 the total was $17,638,466 as against $27,037,297. A considerable portion of this may be set down to the war, as, directly hostilities were declared construction work was stopped on many jobs and contemplated work was postponed.

Collections were difficult at times, owing to the general tightness of money. The failure of many small and two large contractors hit several lumber firms.

The sash and door factories were only fairly well supplied with orders, and naturally felt the decline in building operations. Box factories did not have a satisfactory year. One of the principal firms, however, was helped out by a very substantial order from the Government for ammunition boxes.

### The Timber Situation

With regard to the timber section, the following statement by Mason, Gordon & Company, Montreal, sums up the situation: "At the opening of 1914 we looked for business to fall off as compared with the preceding two years, but up to the declaration of war we were agreeably surprised, as sales were pretty well up to the average mark. With the opening of war, however, all public works were stopped, with the exception of those actually in course of construction, and the railways and other large industrial corporations shut down on all construction work which was not absolutely necessary, the result being that the demand for timber stopped entirely.

"The outlook for 1915 is anything but bright, as there is practically no new work being considered, and unless the war is brought to a finish in the early part of the year, of which there seems to be very little probability, the prospects are that the timber business in Canada will be poorer than it has for many years past. Notwithstanding the claims made by Old Country timber and lumber merchants that they have ample supplies on hand, the writer's belief is to the contrary. Information derived from outside sources leads to the opinion that the stocks are not large, and that it will be only a matter of time until the trade will have to come to this market for large supplies and make up their minds to pay the additional and very heavy freights being asked by all classes of shipping men."

### Prospects for the Current Year

The outlook is uncertain, much depending upon the course of the war. Whatever may be the volume of business transacted, the chances are all favorable to quotations keeping firm. There has been a considerable decrease in the cut, and this will tend to maintain a buoyant market. Should the freely predicted boom in the United States materialize, Canada will no doubt feel the effect, and the lumber trade will participate in the better business, thus making up for any loss in the home trade. So far as Montreal is concerned, the building business is not likely to exhibit any great recovery. Office accommodation is more than sufficient, and the demand for small houses is not equal to what it was a year ago. On the other hand, local yards are pretty bare of stock, and even a moderate demand by consumers will mean good orders going to the wholesalers.

### Serious Decline in Exports

It is many years since exporters to Great Britain and the European Continent experienced such a trying season as that of 1914. Every shipper lost business as compared with the corresponding period a year ago, which in its turn showed a decline of just over 3½ million feet. The following table gives details of the exports:

| | 1914 Ft. B.M. | 1913 Ft. B.M. | 1912 Ft. B.M. |
|---|---|---|---|
| Watson & Todd, Limited ... | 26,165,790 | 34,596,642 | 33,217,881 |
| R. Cox & Company ... ... | 11,336,151 | 18,326,191 | 17,316,113 |
| J. Burstall & Company .... | 6,708,937 | 8,905,256 | 9,149,894 |
| W. & J. Sharples ... ... ... | 6,296,006 | 13,571,128 | 12,943,460 |
| E. M. Nicholson ... ... ... | 5,284,731 | 7,695,305 | 7,670,003 |
| E. H. Lemay ... ... ... ... | 3,339,582 | 3,522,941 | 8,857,349 |
| Dobell, Beckett & Company. | 2,677,768 | 3,527,783 | 4,267,930 |
| Cox, Long & Company ... .. | 474,818 | 1,878,741 | 2,211,896 |
| Railway Steamship Lines and small shippers ... ... ... | 9,117,618 | 13,795,180 | 13,736,236 |
| | 71,401,401 | 105,819,167 | 109,370,762 |
| Decrease for 1914 ... ... | 34,417,766 | | |

| The destination of the lumber was as under: | Ft. B.M. |
|---|---|
| South Africa ... ... ... ... ... ... ... ... ... ... ... | 1,543,053 |
| Great Britain and Continent ... ... ... ... ... ... ... | 69,858,348 |

During 1913 101,543,392 feet were sent to Great Britain and the Continent; 4,011,701 feet to South Africa, and 264,074 feet to Australia and New Zealand.

The falling off, shared in by nearly all classes of lumber, was due to a combination of untoward circumstances, the war, of course, being the predominant factor, but even before the commencement of hostilities there were indications of a shortage in the shipments. The season started in rather poor shape, the deterrent influence being the high prices asked; consequently the earlier shipments were small in quantity. When the war started there was a decided lessening of exports, as, apart from the natural disinclination to buy under such conditions, the steamship companies put up rates to such an extent that business was seriously handicapped. Following the outbreak, the Government commandeered a large number of vessels on the Canadian route thereby lessening the tonnage available and preventing shipments which would otherwise have been made. Towards the end of the season space was in great demand, but practically none was to be obtained, and whereas, in former years, firms were rushing goods to the other side, during the latter part of the past season trade was practically at a standstill. Had the Government taken the needed vessels from other than Colonial routes, it would have considerably helped the lumber business so far as Canada was concerned, spruce in particular being in great request just prior to the close of navigation. This demand has continued. The closing of the Baltic resulted in Canadian red pine being ordered in larger quantities than usual, but owing to the scarcity of space, it was impossible to fill all the orders. Birch was only a moderate market.

As to the outlook for next season, almost everything depends up-

on the war. Freights just now are exceptionally high, 90s. being refused for London, and if this condition continues it is almost certain that British buyers will only purchase for immediate requirements. Ships are in great demand, and until the war is over and tonnage released, there seems little chance of rates dropping to reasonable figures. Freights, indeed, are likely to be the all-important factor in the export section. Should the unexpected happen, and the rates come down, there is the prospect of a satisfactory opening next season, as Canada will be relieved from Baltic and other competition, for the time being, and thus have a much freer market than in past years. With cheaper labor available, manufacturers may be able to help the trade with lower cost of production, although very little relief can be expected from this quarter. The increasing price of lumber is an influence to be reckoned with in the open market of Great Britain.

### Pulp and Paper Trade Improved

The European situation, so unfavorable to many branches of commerce, stimulated the Canadian pulp and paper industries, in most lines. The outbreak involved the cutting off of certain pulp supplies from Europe for the United States and also resulted in an increased demand for newsprint from this market. The mills over the border were handicapped by a serious shortage of water, and this compelled certain buying orders of pulp to come to Canada. Under all these circumstances prices ruled very firm, especially since the war, although there has been a drop from the highest quotations.

The ground wood market showed a distinct improvement as compared with the preceding year, but production would have considerably increased had not the Canadian water powers been low during a portion of the period. The United States were very good customers, the exports of 188,612 tons from January to November inclusive being 18,000 tons more than the entire exports for 1913.

Sulphite was in strong demand, owing to the war, and stocks were cleaned up. Gradually, however, the orders eased off, and these are now on a normal basis. Under the stress of the large buying, prices advanced materially, and notwithstanding a subsequent decline, it is expected that they will hold firm throughout the current year. Canada exported to the United States from January to November 19,000 tons of unbleached and 11,000 tons of bleached chemical pulp. A considerable portion of this was kraft pulp, and there are now three mills engaged in the export of this description of pulp to the United States.

When the war opened there ensued an extraordinary demand for newsprint, many good orders coming to this country both for the United States and British possessions. Since then there has been a slackening but there is still a large amount of buying. Canadian mills were able to dispose of their entire output for last year and to run their plants to the full capacity. The exports to the United States were from 23,500 tons in January to 27,000 tons in November. The prospect is that during 1915 these exports will be materially increased. Only one additional news mill will come into operation and that in the latter half of the year.

Other lines of paper and boxboard were adversely affected by general conditions, with the result of considerable curtailment in the manufacture. The made-in-Canada movement may not unnaturally be expected to help this industry.

In connection with the low water conditions, such important rivers as the Ottawa and St. Maurice fell so low that the average quotas of logs were not floated down, and many saw mills and pulp mills experienced a considerable shortage in their timber. A Government dam at Lake Temiskaming gave out. This had been built as a reservoir for the Ottawa River, to hold back the water until required during the dry season, thus maintaining the level at such pulp and paper making points as Ottawa and Hull. It is understood that the dam is to be put into first-class condition, which will, of course, tend to improve the condition of the Ottawa River.

New pulp and paper plants continue to be erected. Some were opened during the past year and others will be put into operation during the current twelve months. The following additions were made to 1914 production: St. Frances Mill, Fort Frances, Rainy River, 150 tons of newsprint per day; Brompton Pulp and Paper Company, East Angus, P.Q., 50 tons of newsprint; Abitibi Company, Iroquois Falls, Ont., 200 tons of ground wood; Montreal Box Board and Paper, 35 tons of box board; Hinde and Dauche Company, Toronto, 40 tons of box board; the Beaver Board Company, Thorold, Ont., 50 tons of wood board for beaver board purposes; and the Partington Pulp and Paper Company, St. John, N.B., 20 tons of bleached sulphite.

During 1915 it is expected that the Abitibi Company will manufacture 200 tons of news pulp, commencing in July, while the St. Lawrence Pulp and Lumber Corporation, Chandler, P.Q., will market 100 tons of sulphite fibre, and the Bathurst Lumber Company, N.B., 60 tons of boxboard and 25 tons of bleached sulphite. The Belgo-Canadian Company, Shawinigan Falls, P.Q., will add 50 tons of sulphite, and the Riordon Pulp and Paper Company have made an addition of 25 per cent. to their capacity at Hawkesbury, and have also made extensive improvements to their sulphite plant at Merritton. The Laurentide Company are adding 60,000 horse power to their development at Grand'Mere, P.Q., the scheme including a new ground mill and other additions. At Ottawa the Booth Company have added two digesters to their plant, doubling the capacity of the mill. It will thus be seen that there are plenty of mills to take care of any increase in orders.

One of the circumstances which will probably have to be taken into account during 1915 is an increase in railroad rates for all shipments to the United States, the companies having decided to add five per cent. to those now in existence. This arises out of the judgment of the Interstate Commerce Commission allowing the United States lines to raise their rates. It remains to be seen whether our Railway Commission will allow a corresponding increase to be made on this side.

During the year the Canadian Pulp and Paper Association has widened its borders, and is now developing into an aggressive organization. Most of the large companies and firms are members.

---

## Price Brothers Had a Successful Year

The annual meeting of the shareholders of Price Bros. & Company, Limited, Quebec, P.Q., was held on January 28th. A favorable report was presented upon the operations of the year 1914. Profits were shown to the extent of $692,830, an increase of $180,303 over the previous year. After all charges were deducted, a balance of $233,779 remained to be brought down as compared with $173,788 in 1913. This balance would represent 4.7 per cent. on the $5,000,000 common stock, on which no dividends have yet been paid, as compared with 3.5 per cent. in 1913 and 4.3 per cent. in 1912. With the balance brought forward the total at the credit of the profit and loss acount would reach $1,260,031, but the directors decided to set aside a sum of $250,000 to depreciation reserve, leaving $1,010,031 at the credit of profit and loss, which is $16,220 less than at the end of 1913. Sir Wm. Price, president of the company, in his report expressed satisfaction with the company's operations in the paper business, he stated that pulp had been affected by low prices and lumber by slowness in the general demand. On account of the low prices for pulp, the company's ground wood mill at Rimouski had been shut down during the year. The lumber department, while proving as profitable as formerly, had suffered in common with similar undertakings, particularly in the domestic market, but the outlook was now considered better, owing to the increased demand from the United Kingdom.

Referring to the Kenogami paper mill, the president said that this undertaking had added considerably to the company's earning power. The directors were satisfied that 1915 would show even better results from this source. The mill was now operating at full capacity and contracts had been made for the output of the year 1915.

---

## Outlook is Decidedly Hopeful

Editor, Canada Lumberman:— Montreal, Que., January 18th.

I feel that, considering the severe shock which the lumber trade sustained with the outbreak of war and the immediate and consequent restriction of financing, following the year of depression preceding, the lumber business has withstood well the demand made upon it. There has been no slaughtering of prices, not more than the number of failures ordinarily expected, and there has been shown, to my mind, everywhere, a desire on the part of those engaged in the trade (which by the way, is the best business in the world) to stand by one another. I do not know of one single instance where one lumberman has sued another to enforce payment of a debt which the other party was unable to pay.

Undoubtedly there is, and will continue to be an increasing demand for Canadian lumber in the British Isles, parts of Europe, and other parts of the world, due, in the first place, to the extraordinary demand for lumber now prevailing in these countries, and, in the second place, to the curtailment of supply from northwestern Europe. Our seaboard markets are the first, naturally, to benefit from this demand, but undoubtedly this will have a reassuring effect throughout the trade in Canada. I am advised that many eastern manufacturers have sold their entire output of spruce to be cut this season at prices higher than have yet been known. I understand, on good authority, that a cut of thirty million feet of spruce to be sawn this season was sold at approximately $20 per M. f.o.b. the vessel. Undoubtedly, with the opening of spring, whether there is an improvement in the war situation or not, there will be a great demand for lumber at increased prices.

I consider the outlook for 1915 decidedly hopeful.—C. A. Spencer.

---

Hon. John Hall Kelly, M. L. C., of New Carlisle, P.Q., in a recent interview, stated that business conditions in the county of Bonaventure and along the coast of Quebec were, in comparison with other parts of the province, very good. So far this season, he says, there has been a decrease in the cut of timber, owing chiefly to the fact that money has been very tight.

# Nova Scotia's Lumber Trade During 1914

## Output Considerably Greater Than Generally Supposed—Outlook for 1915 Exceptionally Promising—Some Comparative Estimates

IT is almost impossible to obtain complete statistics of the annual lumber cut of Nova Scotia. It is true that the yearly shipments of lumber from the numerous ports of the province may be obtained from the Custom houses, but this method of acquiring information is a tedious one, involving considerable correspondence and requiring lots of time, for some of the Collectors of Customs are in no hurry to answer questions. But, assuming that returns of all shipments have been secured, the seeker for statistics is still far from knowing the exact amount of the annual lumber cut. He has no reliable figures concerning the quantity of lumber required for home consumption. No accurate records are kept of the quantities used every year for building purposes, for railway ties, for pit timber and for making barrels and boxes. The character of the material used for some of these purposes precludes the possibility of keeping correct measurements, and even the census taker is unable to get anything better than approximate figures. These, however, may be fairly correct, and while any consumption of the quantity of lumber used for home consumption must necessarily include some guesswork, yet it is quite possible that a reasonably accurate estimate may be made.

It is generally supposed that newspapers like to make a good showing concerning the products and resources of their own country. It is even hinted that some of them are slightly inclined to exaggeration when dealing with these subjects in order to make a good story. But some of our provincial papers are entirely free from any suspicion of exaggeration so far as the lumber trade of 1914 is concerned. One leading paper makes the astounding statement that "the export in Nova Scotia was 200,000,000 feet as compared with a normal of 225,000,000." The same paper just one year before announced that "information from all available sources indicates that the lumber cut for this province for 1913 would total about four hundred million feet, which is a fairly average cut." One year earlier the same paper said: "The average output from our forests is half a billion feet of lumber." This agrees very well with a statement made by the Deputy Crown Land Commissioner and Chief Provincial Forester, who should know what he is talking about, and who said a year ago: "For many years the annual timber cut has been in the vicinity of 500,000,000 feet."

### Popular Estimates of the Cut Much Too Low

Not content with cutting off "at one fell swoop" at least one-half of the average yearly output, without giving any adequate explanation, the paper proceeds "to note the lumber cut from Nova Scotia by counties." This is, perhaps, fortunate, for it gives a better opportunity to compare the figures with the facts. Take the county of Cumberland, for instance, which was allotted 30,000,000 feet as its share in the cut of the province. The facts are that the shipments from Parrsboro alone to Great Britain, last year totalled 32,972,489 feet, or more than the total allotment of all kinds of lumber to the whole county, while the shipments from Pugwash to the United Kingdom aggregated 19,369,829 feet. When to these figures are added six million feet shipped by one operator at Apple River to the English market, 400,000 feet shipped by a Parrsboro operator to the same market via St. John, and the shipments from River Herbert and other ports not included above, it will be found that the shipments to Great Britain alone from this county are more than double the total cut assigned to it by the newspaper statistician. Probably somewhat similar results might be obtained in nearly all the counties by careful investigation. The cut of Queens and Shelburne was put at 15,000,000 feet. Mr. Charles F. Wright, Collector of Customs at Liverpool, assures me that, from the best information he can obtain and from his own personal knowledge, "the cut in the two counties last year was not short of 26,000,000 feet." Lunenburg, according to the newspaper authority, had a cut of 45 million feet last year. The returns from the port of Bridgewater were 35 million feet of lumber, valued at $612,000; 3,708 cords of pulpwood worth $22,224, and 6,617,000 laths, valued at $18,633. In the opinion of Mr. N. C. Owen, Collector of Customs, the shipments of long lumber would have reached forty millions but for the unusually early closing of navigation. With the shipments from all the other ports in the county uncounted, it looks as if the newspaper allotment were somewhat under the mark.

Another startling statement, which would be important if true, is contained in the article which makes such a slashing cut into the lumber cut of Nova Scotia. The statement is in effect that New Brunswick spruce commands over two dollars per thousand more than the price Nova Scotia lumber is bringing, "the reason for the difference being that the wood from the sister province is larger, longer and of a more even quality." This statement, as it stands, is a base libel on the lumber of Nova Scotia. The truth is that while some New Brunswick lumber is better than some of the Nova Scotia product, some Nova Scotia lumber is superior to some of the lumber cut in New Brunswick. In other words, some grades of lumber in both provinces are better than some other grades. The only basis for the statement about the difference in prices, which as a whole is entirely false and misleading, is found in the fact that on the North Shore of New Brunswick there are some mills fitted to cut lumber of any required dimensions, and this dimension lumber commands from fifty cents to one dollar per thousand more than the average price for lumber in other parts of New Brunswick and in Nova Scotia. Why a leading newspaper should take the trouble to reduce by at least one-half the output of an important provincial industry, and at the same time depreciate the quality and price of what is left, is something that passeth understanding.

### The Shipments From Parrsboro

The shipments from the port of Parrsboro last year were fairly satisfactory, and, in comparison with the output of the preceding year, give some indication of the condition of the lumber trade in the greater part of the province. The deals, scantlings and battens shipped to the United Kingdom last year totalled 32,972,489 feet, valued at $531,710. The corresponding shipments in 1913 aggregated 18,186,656 feet, with a valuation of $278,910. The exports of spruce boards and scantlings to the United States last year amounted to only 6,165,807 feet, valued at $121,972. This was a considerable falling off in comparison with the exports of 1913, which showed a total of 7,830,071 feet, valued at $117,695. The decrease last year was due to the slump in the United States market, for fully three million feet of lumber intended for that market is being held over, but it will be noted that the export for 1914 had a larger valuation than the greater quantity exported the preceding year. The number of laths exported to the United States last year was 9,134,500, valued at $23,082. This was a large increase compared with 1913, when the number shipped was 4,677,600, and the valuation was $10,769. The piling exported last year numbered 42,963 pieces, valued at $82,620. In 1913 the pieces numbered 38,353, and the valuation was $69,871. The total amount of sawn lumber shipped from Parrsboro last year was 40,965,196 superficial feet, and the valuation was $676,765. The valuation of the piling added makes a total of $759,394, which is the largest valuation for many years. In 1913 the quantity of sawn lumber shipped was 26,951,289 feet, valued at $407,374, with the value of piling added the estimated value of the total lumber shipments from Parrsboro that year was $477,245. In 1912 the total value of the output was estimated at $530,419.

The difficulty that must be found in getting anything like correct returns of the output of even one county is well illustrated by one item in the output of the mill of Chas. T. White & Sons, Limited, East Apple River. The item reads as follows: "3,400,000 pieces of dowels, 12 inches to 48 inches in length." The most accomplished guessers would be likely to come a few feet out of the way if they attempted to reduce that number of dowels to board measure with no other guide than the item quoted above. Another puzzling problem will be found in any attempt to estimate the quantity of lumber contained in the pit timber cut and used in this county. Possibly the exact number of the pieces may be obtained, but as the props used in the mines differ greatly in size and length, and as there may be many more of one size than of any other size, or of one length than any other length, it is obvious that it would be no easy task to fix upon an average standard by which the dimensions of all pit timber may be measured. Large numbers of pit timbers are cut in this county, and should be counted in the lumber output, but it is almost impossible to get any more than an approximate idea of the amount of lumber they contain. The same is true in a limited degree of railway ties, of which large numbers are cut in this county and in other parts of the province, and of boat masts, flagstaffs and clothes props, of which considerable quantities are sometimes shipped to the United States from the western part of this county, and yet all of these things form a part of the lumber output of this county and should be counted in it. If this were done the lumber cut of this county would be much nearer to one hundred million feet than to the thirty millions assigned to it so glibly by the newspaper before mentioned.

Probably the same thing would hold true with regard to all the counties in the province with the exception of Yarmouth, Digby and Annapolis, where a falling off amounting to many millions has been caused by the closing during last year of the mills of three large operators. This temporary suspension will result no doubt in a larger output in the future, and will cause no permanent loss to the province,

but it has caused a reduction in last year's output amounting to perhaps forty million feet.

### Forest Fires Caused No Serious Losses

With regard to forest fires the past season was decidedly exceptional. Not a single large fire was reported. Whether this was due to increased activity on the part of the forest rangers or to other causes, or to a combination of careful watchfulness and good luck, the result is certainly highly satisfactory. Mr. G. W. Smith, representing Chas. T. White & Son, Limited, writes with regard to forest fires as follows: "We keep fire rangers in the woods during the dry season, and have steel towers 75 to 80 feet high erected on the highest land overlooking the forest. We find these of great value." Chas. T. White & Son, in addition to their large mill at East Apple River, control several other mills on the New Brunswick side of the Bay of Fundy, and their combined output amounts to about twenty-five million feet of lumber annually. They evidently appreciate the importance of preventing forest fires, and are willing to spend good money to secure that result.

The outlook for the lumber trade in this province was never better than it is at present. The great war has increased prices by cutting off the supply from northern Europe, and when the war is ended the demand will probably be greater than ever. It is evidently to our interest to let the nations which will require much lumber know that we are in a position to supply it, and it surely is the height of folly to represent our lumber cut at this particular period as very much smaller than it really is.

## Nova Scotia Trade Expecting a Good Year

A Nova Scotia newspaper recently published the following reference to the lumber industry of that province during the past year:—The total lumber cut in Nova Scotia and New Brunswick in 1914 was scarcely up to that of 1913, but the deal shipments were larger. The total trade in deals was estimated at 400,000,000 feet, and prices averaged $16.75 per thousand feet, ranging from $14.50 to $19, the latter being the outside high price for a good specification. This return is better than that obtained in average years, and is $2.50 per thousand above that of 1912. Owing to the shutting off of the Baltic supplies on account of the war, the market in England at the present time for deals is very firm, and is almost certain to continue so, at least throughout the first half of 1915. Our expectation therefore is that a larger cut of deals than usual will be made this winter. The American market, excepting in April and May, was not satisfactory at any time during the year, but the local trade kept up very well until the end of August. Throughout 1915, especially in connection with the large public works in progress, we expect the local demand will be very fair. All the manufactured stock of 1914 has been well cleaned up and the industry is in a sound condition. The usual quantity of mechanical pulp was manufactured and produced fair profits, but the English market is at present extremely depressed and the immediate outlook is not bright. There is some prospect of a trade in pit props, but as the price which the mine owners of Great Britain have been paying for European supplies delivered is about the same as the minimum price at which our people can afford to sell them f.o.b. Halifax, we do not look for any considerable business in this line unless the war is a long one. There was no damage to speak of from forest fires during the year.

## The Track Being Cleared for Progress

Chase, Talbot & Company, New York, in a recent lumber market letter, say in part:—"Building operations in Manhattan last year fell off about $50,000,000. A good omen for this year. The steel trade is improving. Prices are hardening. The new Federal Banking System is an aid to all industry in extent difficult of calculation. The final grant of the five per cent. increase in railroad rates to the fifty-two eastern roads will stimulate their purchase of much needed supplies. The status of the money market is normal and the opening of the Stock Exchange has shown that no considerable liquidation need be feared.

"Our opportunities can only be measured by our energy. If there is any nation in the world justified in hopefulness during this period of European war it must certainly be our own. We shall have no regrets if we first see clearly and then summon the maximum of courage. Endeavor to differentiate between emergency conditions, necessary measures to correct such, and the fundamental soundness of commercial enterprise. We shall all find it necessary to employ our best effort to work up hill, but we must do it or fall into the pit, upon the brink of which we all stand. The path is clear, there are no dark clouds, conditions augur well for a realization of our fondest hopes, the most encouraging of which perhaps is that the present administration bespeaks fair treatment for all business interests that may come into contact with the government."

## Personal Paragraphs from the Trade

Mr. Frank Pauze, vice-president of U. Pauze & Sons, lumber merchants, has been elected president of the Montreal Chambre de Commerce.

Mr. W. K. Grafftey, of the Montreal Lumber Company, has been re-elected an Alderman of the Westmount Council. There was no opposition.

Mr. E. W. Tobin, M.P., who is largely interested in lumber in the Eastern Townships, has been elected Mayor of Bromptonville, P.Q., by acclamation.

Mr. A. G. Rose, of the Estate James Davidson, Ottawa, is on a business visit to England. He left by the Vaterland from Halifax and will be away for several months.

A branch of the Home Guards has been formed by the employees of the Estate James Davidson, Ottawa, under the command of Major Henderson, a member of the firm.

Mr. A. C. Manbert, of the firm of Graves, Bigwood & Company, Traders Bank Building, Toronto, left early in January with his family for a two months' visit to his brother in South Pasadena, Cal.

Mr. J. K. Muir has retired from the firm of Muir, Terry & Gordon, wholesale lumber merchants, Confederation Life Building, Toronto. The business will in future be carried on by Mr. H. J. Terry and Mr. A. E. Gordon, under the name of Terry & Gordon.

Mr. John D. Mershon, President of the John D. Mershon Lumber Company, of New York, N.Y., Saginaw, Mich., Kansas City, Mo., and Chicago, Ill., announces the retirement of Mr. Wm. D. Mershon, who has been manager of the New York office. The New York office hereafter will be under the management of Mr. Harry J. Strong, who has been Mr. John D. Mershon's assistant in Saginaw for several years. Mr. W. J. Denning and Mr. P. M. Gerhart will continue to look after the Canadian trade, Mr. Gerhart looking after Ontario, while Mr. Denning will call upon the trade in the Province of Quebec, as he has been doing in the past. Mr. John D. Mershon reports business very good at the present and is very optimistic over redwood business conditions in 1915.

## Sudden Death of W. H. Rowley

William Horsley Rowley, president of the E. B. Eddy Company, Hull, P.Q., died recently at the King Edward Hotel, Toronto, during a business visit. Mr. Rowley's death was very sudden, occurring as the result of heart trouble, while entertaining a friend in the tea room at the hotel.

The late Mr. Rowley was in his 54th year and was one of the most prominent and successful financial men in Canada. He was possessed of remarkable executive ability, and as president of the E. B. Eddy Company was the head of the largest industry of its kind in the British Empire.

Mr. Rowley was born in Yarmouth, N.S., on March 21st, 1851, his parents being U. E. Loyalists of English descent. At the age of 16 he entered the Bank of Yarmouth as a clerk, having already graduated from the Royal Military College, Halifax. He remained with the bank until 1871 and then joined the Merchants' Bank of Canada. In 1880 he was appointed manager of the Ottawa branch of the Merchants' Bank and continued in this position until 1887 when he became secretary-treasurer of the E B. Eddy Company, a position which he held until the death of Mr. Eddy in 1906. Mr. Rowley was then elected president of the company and joint general manager with Mr. Geo. Millen.

The ranks of New York City wholesale lumber salesmen lost one of their sterling members recently when Michael E. Courtney succumbed to a stroke of paralysis. He had suffered a similar attack about two years ago. Michael E. Courtney was born at Huntington, P.Q. When very young he moved to Burlington, Vt., where he first entered the lumber business as a boy not yet in his teens. He began with the firm of Bronson, Weston & Dunham, receiving a thorough education in the practical end of the business through active experience. This connection was continued for many years, and when it terminated he became associated with the A. C. Dutton interests at Menominee, Mich. Following this he was for ten years with the Shepard & Morse Lumber Company in the New York branch of that company's business. This association was concluded in 1908, when C. E. Kennedy entered the wholesale business on his own account, and he had since been identified with this business in a selling capacity, operating in the Metropolitan District and part of Long Island.

The Herbert Morris Crane & Hoist Company, Limited, Peter Street, Toronto, have issued an interesting illustrated bulletin describing "The Morris Belt-driven Friction Hoist," a simple but effective hoist for small loads, which is easily applied and seldom requires any special construction for its erection. This hoist can be driven either from an existing line shaft or by means of a special engine or motor.

# Survey of Prairie Trade During 1914

## The Course of Events and the Prospects for 1915 Reviewed and Discussed by Leading Manitoba Lumbermen

In reviewing the conditions of the lumber trade of the Prairie Provinces during 1914, it is unnecessary to say that the trade has not been in a flourishing condition. It is certain however, that conditions of the past season compared with 1910, present very interesting figures. It will be seen that the decrease is not so large as would be expected. The succeeding three years 1911, 1912 and 1913 were however, exceptional good years in all lines of business, the climax being reached in 1912. In 1913 trade, although poor compared with the preceding two years, was yet ahead of 1910. Most people are in the habit of measuring their prosperity by comparing it with the past two or three years. We should however, take sufficient of the previous years to make a fair comparison, before coming to any decision regarding last year's trade.

The past season started with the banks and loan companies conserving their credit to an unprecedented extent, a state of affairs which continued until the end of the year. In addition to this, the financial situation was made infinitely worse by the plunging into war of the British Empire. The result of this financial stringency soon made itself very apparent. The value of building permits throughout the west decreased at an alarming rate. Municipal bodies postponed the carrying out of further expenditures, private enterprise became practically nil; in fact, almost the whole work of construction was postponed pending such time as would see the situation cleared. This financial stringency has caused numerous embarrassments to those engaged in many branches of the lumber industry; more especially in British Columbia than in the Prairie Provinces.

Western Canada as a whole will benefit from the lessons which are now being learned in economics, finance and business, and when normal conditions return, these lessons will prove of great service to the community, inasmuch as wild-cat speculation will probably be a thing of the past and sounder business will be the keynote of the future.

The outlook for 1915 presents a difficult problem. There still remains the difficulty of obtaining loans and it is certain that this trouble will be with us until the end of the war. The whole of the west will curtail expenditures for 1915. Construction work in civic, government, and private enterprise will all be much less than during last year, unless some unforeseen circumstance arises to upset present calculations. Much depends upon the success of next year's crops, and upon the speedy termination of the war in the allies' favor. It is quite possible that, were success to come to the allied army soon, we would find a larger amount of money circulating in Canada.

The stocks now held by retail lumbermen are being kept at a very low level. When trade improves, the mills will therefore find an increase in their business. A gratifying feature of the situation is the fact that throughout the year collections have been reported good.

Surveying the outlook from all points, it appears that the lumber trade will benefit by the war. Business will be done on a much sounder and healthier basis than in the past. The companies which weather the present storm will reap reward when conditions return to a normal basis. Those whose existence depends upon speculation, and those who are established by huge credits and very little cash will probably suffer.

### Western Conditions Analyzed

Editor Canada Lumberman: Winnipeg, Man.

In response to your request for a letter on the lumber situation, I may say this is rather a difficult subject to discuss intelligently owing to the demoralization of the trade at present. It is no news to state that 1914 has been an unsatisfactory year to all branches of the trade and it would take someone with more of a prophetic nature than I claim to possess to say what 1915 holds out for us. We are too prone, however, to contrast the situation now with that of 1912 when the entire West was in the throes of a boom and manufacturers as well as retail dealers have overlooked the fact that the commercial development of western Canada the last few years has been really abnormal. Railroad building of main and branch lines was at its height and new townsites opened every few weeks, to cover the demands of which trainloads of lumber were required and immense orders were placed by the railways for construction purposes and I venture to say it will be, at the least, five years until this condition again exists. Our immigration to the West has been unprecedented in any other country: Our cities such as Winnipeg, Regina, Saskatoon, Moose Jaw, Calgary, Edmonton and the Coast cities filled up and built up and unfortunately anticipated the requirements too far ahead and over built. All this caused a greatly increased demand for lumber and induced the manufacturers to extend their operations until in a normal year, or in a period like the last six months, a condition below normal, it has resulted in over-production which forced prices down to such a point that producers, on the Coast especially, were manufacturing and shipping lumber at an actual loss of two or three dollars per thousand. The base price at the mill kept getting lower and lower while the freight rate remained stationary. Many mills have closed down voluntarily, others have been closed down by the sheriff, while the few mills at the Coast running to-day are doing so owing to the fact that they have secured a meagre offering of export business and are forced to market their side lumber and commons at a loss.

The cessation of business and tightness of the money market is generally attributed to the war but in my opinion it is a moot point if western Canada has suffered to such an extent from this cause. It is generally conceded that our crop this year was away below normal and if the war had not helped prices to the extent it did, our farmers would be taking in the neighborhood of 40c per bushel less for their wheat than they had received in former years. It is generally conceded that the value of the light crop this year was as great, or nearly so, as the value of the big crop last year. This money would, of course, not be as well distributed, as large returns for grain does not help a district with nothing to sell. Did the real estate boom not reach the crest of the wave, however, before there was any thought of war, and had not the farmers and city men who had speculated in farm lands which still lie idle, in town lots where the weeds are now growing, and in buildings in cities, which buildings are mainly unoccupied, reached a point where the money they had taken from their business or the money they are owing the retail merchants in all lines for supplies would have to be repaid and no means to do so

Whether we will benefit at the cessation of the war (which we all trust will be soon) is something that admits of diversity of opinion but unanimity of sentiment. That we will get funds to continue our city building, municipal bond work, sewers and all the purposes, for which we are necessarily (being in a growing stage) a borrowing nation, is a point of consideration. Our money comes mainly from Great Britain, France, Belgium and Holland who are all lending nations. Whether the devastation in some of these old lands will not be so great that they will need their money to loan on rebuilding projects in the Old World is something I am sensible of my limitations to pass an opinion on. That we will have a much increased immigration of skilled farmers, masters of mixed farming and that a great deal of our fertile soil placed under cultivation is something it does not take a rose-colored imagination to predict. When this happens and the stream of immigration comes in countless thousands, the mill saws will buzz merrily again and the country retail lumber dealers will begin to hire extra men to help handle their business. At present the one bright gleam of sunshine in the horizon of the manufacturer is that while there will not be a large volume of trade in the cities as the building will necessarily be light, stocks in the country yards are generally much lighter than ever before at this time of the year and good orders will be placed for present requirements. The fly in the honey to the retail dealer is that while country building should be brisk the insidious mill to consumer artist is rapidly gaining ground and methods of figuring this unfair competition are well worthy of the careful consideration and co-operation of every dealer.

We all realize this West is, and will be, more a producing country than anything else; our hope of prosperity lies in the production of cereals from the soil and in stock to feed on the fallow and grazing lands of the different farms. We have in the cities, as shown in the recent census of unemployed, many thousands of able-bodied men who are in destitute circumstances on account of the lack of work to give them employment. Many of these men have been engaged in railroad work and the railroad development is over until the land fills up more and new freight is created to demand transportation. What are these men going to do? Many of them are Galicians and peoples from the countries of South-Eastern Europe who, in their own land, are essentially farmers and land tillers. We want men on the farms and do not need them in the cities. These men, given experience, would make good farmers but they have not the means or the wherewithal to go on the land. Both governments have been in favor of assisted immigration but after they have assisted the immigrant to get here their interest in him ceases until election time. Could money be better employed than for the government to set aside a large sum of money to put these people on farms in districts or colonies and take all the agricultural graduates they can secure, put them in charge of a district to teach these new settlers to farm properly, allot the settlers sufficient implements to farm with and make farmers out of them; fill up the country; become good citizens and large users of lumber. I would venture to say that in ten years ninety per cent,

of these settlers would have paid back to the government with interest all the money expended on them, and the country as a whole would be that much better off with the prosperity which would ensue from turning bare prairie into waving golden fields of grain.

It is much easier to write a letter boosting conditions than one taking the above viewpoint and my object in this is to see, if by co-operation we cannot build up our market by devising some scheme to build up our farm lands and populate it with potential lumber users. —H. S. Y. Galbraith, President H. S. Galbraith Co., Ltd.

### The Banking Problem a Great Factor

Editor Canada Lumberman: Winnipeg, Man.

So far as the general lumber situation is concerned, I think it is impossible for me to say anything other than what is already known. The saving features of the situation are, that stocks are low everywhere, and that there has been, and will be during the coming year, a material reduction of lumber output from all the mills. We are interested more particularly in the Northern spruce mills, and I do not believe that there will be over twenty per cent. of the usual cut taken out this year.

So far as the city trade is concerned, we cannot expect any improvement until after the war is over and financial matters can be settled. In country trade, the situation is only a reflection of the general sentiment that these are hard times, and that everybody should go slow. As for the farmers—outside of those who expected to get loans through on their properties—I cannot see that they have been injured by the European war—but their state of mind is the same as that of the merchant or manufacturer whose business has been severely affected.

I think that the present situation in the west is perhaps due more particularly to the spotted, or light crop which we had last year; and also to the extreme conservatism which is being shown by the banks throughout the west. Through the retail yards in which I am interested, I have had occasion to note the great handicap under which the farmers and other residents of the western country are placed by reason of their banking facilities being in the control of managers who have comparatively little interest in the community itself.

These are times when the bankers are rightly conservative in regard to loans, but this conservatism reaches an extreme state after it has been strained through the general manager's office in the east; also through a western manager—with headquarters in Winnipeg; and finally reaches the local manager in one of our little western towns. To make himself secure at the head office he is much inclined to err on the side of conservatism, and many individual cases have come to my notice, where men who were entitled to credit were unable to secure any; or, if they did manage to secure a small loan, the bank took over from them as security practically everything that they had, thus embarrassing them when security was asked of them by lumber dealers or some other creditors.

It seems to me that this is a great problem in our country, and, although the banking system here has its advantages, at the same time we lose a great deal in not having a system whereby the man who controls the bank is identified with the community, and has an individual and personal interest in the community itself, and in those who reside there.—W. P. Dutton, Dutton Wall Lumber Co.

### War the All Important Factor

Editor Canada Lumberman: Rivers, Man.

It is well known and recognized that the trade of the past season was extremely poor in the lumber business owing to crop conditions. The depressed state of the financial markets was acutely accentuated by the outbreak of European hostilities. Around this district there appears to prevail a feeling of pessimism regarding future conditions, which may or may not be warranted. The future conditions wholely depend upon how quickly the war terminates in our favor, then we may expect a slow revival in the lumber trade.—Jas. Allen, North American Lumber and Supply Company, Limited.

### End of War Will Bring a Good Demand

Editor Canada Lumberman: Winnipeg, Man.

The lumber trade of the Prairie Provinces during the past year has gradually dropped to a very low level. This has been greatly accentuated by the outbreak of hostilities in Europe. The present is a splendid time in which the trade may—as it were—gather wind, in order to meet the situation when the war is over. The majority of the mills are curtailing their output, and the retailers are keeping their stocks very low, so that when things start to pick up, it is confidently expected that there will be a brisk demand for all kinds of lumber.

As soon as the war is over, there should be a good demand and it is quite possible that prices will go up. Of course it is well known that our prices are governed by those across the line. The lumbermen of this country anticipate a large increase in the foreign trade in lumber. This will not affect the prairie mills so much as it will the eastern and western mills, especially those situated near the water. Building operations in the city will be very slight next year. Very few business blocks will be erected. One good feature of the situation is the fact that speculative building will be almost nil. This will put business on a much sounder basis all round. Taking everything into consideration, it was not to be expected that we could go on as we were during the past few years, and it is obvious that the business which will be done in the future will be more stable and more permanent than that which has hitherto been transacted.—W. G. Maconnel, Commonwealth Lumber Company.

### Expects Improvement Even if War Continues

Editor Canada Lumberman: Winnipeg, Man.

Although the 1914 trade in lumber was disappointing, we can hardly see how any other result could have been expected. This was caused of course, chiefly, by the upsetting of the world's finances by the European war.

For the year 1915 we have hopes that conditions will improve somewhat, even if the war does not come to an end. Were the spring to open up early and the farming portion of the west to feel optimistic, there is no doubt but what business would be stimulated.

We think it is only necessary for every lumberman in the west to make the best of conditions as they are, and if they do not improve as rapidly as we hope for, still to do their best and be inspired with confidence in the situation. Then we will find that business eventually will resume its normal basis, and we will forget our present troubles.—Tomlinson & Mitchell.

## Logging Operations in the Prairie Provinces

Mr. E. F. Stephenson, chief inspector of the Dominion Government Timber Agencies, while on a recent trip in the province of Saskatchewan stated that very few of the large operators in the three prairie provinces were carrying on logging operations this winter. He thought that the city of Prince Albert was very fortunate in that the Prince Albert Lumber Company and the Ladder Lake Lumber Company, which is controlled by the former, had shown sufficient courage to enter the woods and thus provide employment for a large number of men.

## Building Operations in the United States

Building operations throughout the United States for the year 1914, as indicated by the reports from 68 of the principal cities, show a decrease of only nine per cent. as compared with those of the previous year. Up to August 1, when the European war began, the construction work was almost indentical in volume with that of the first months of 1913.

The loss occurred entirely during the last five months of the year. The cause was apparent to everyone concerned in the building trades, namely, the disarrangement of the financial market. Building operations, on account of the large units involved in this work, compared with most other industrial activities, are peculiarly sensitive to money conditions. The unfavorable comparison is therefore not an index of anything intrinsically reactionary in the building industry itself, but simply represents the insuperable obstacles in the way of activity. Thousands and tens of thousands of plans have been held back by the unresponsiveness of the banks and this accumulated work will be renewed with the general easement of loans.

The official reports of building permits by 68 cities for the year 1914, total $634,177,323, as compared with $697,594,916 for 1913, a decrease of 9 per cent.

December naturally makes the poorest showing of the year, since by common consent new undertakings have been carried over into 1915. The December figures are $34,310,848, as compared with $58,661,519 for December, 1913, a decrease of 44 per cent. Twenty-one cities show gains, some of them quite notable.

## Army Will Now Use Canadian Stocks

A cable from London, Eng., says that the War Office, as the result of representations made by Sir G. H. Perley, has intimated that it will remove the embargo hitherto imposed on the use of Canadian white pine or spruce in army tenders. Sir George Perley convinced the authorities that no better timber was available than Canadian. One of the largest wood importers states that the chief War Office supplies for huts, etc., have hitherto come from the Baltic, and says the Admiralty has been large buyers for years past of Canadian white pine and spruce.

Graves, Bigwood & Company, Traders Bank Building, Toronto, report that their woods operations in Northern Ontario are making good progress. According to latest reports the frost and snow which came during the third week in January was very welcome and made the outlook promising for logging operations during the rest of the season.

# Resumed Activity Predicted for B. C.

## Readjustment in Progress Which Will Enable Province to Improve its Situation—Prosperity for the Farmers will Stimulate Trade

By E H. Newton

One year ago I was accorded the privelege of writing an article for your annual number. To make anything like an intelligent forecast for a year opening up as last year opened calls for a thoughtful consideration of many things, almost any one of which may have much to do with the shaping of the program, as well as with the changing of it as time goes on. In reviewing my letter of a year ago, and then reviewing the events up to the time when the enemy of peace and civilization made a thrust at the world, thereby upsetting the equilibrium of trade and commerce, I find that my predictions were in every case justified by events. Indeed, and might I not, without posing, or laying any claim to being a prophet, go further than this and say, that it seems as though a veil of mystery which was spread over us at that time and for some time before and which I tried to find words to describe, has since been lifted, making plain that which was then obscure? Let me quote from that letter, written January 9th, 1914. "We tried hard to be optimistic, but is was of no use, there was a condition which must be met. We had gloomy forebodings of something that seemed in the air. We knew not what it was, but it was there like Ceasar's ghost, and we could not get away from it, and even at this date it is impossible to properly describe it. It seemed as though some impending calamity was coming upon us, and we worked the whole year through under the disagreeable feeling which one experiences when it is believed that the worst is yet to come."

### The Cloud of Mystery Clearing Away

That cloud, which had been hanging over us obscuring the light and which has perhaps had more to do with holding up the wheels of progress than most of us were at that time aware of, and which mystified us for months, has burst. The thunder clap has been heard; the world has been shaken; we have all felt the jolt, and much uncertainty has existed where an over-confidence but a short time before had so permeated our being that we imagined we were up against such mountains of prosperity that it had become a scramble to see who could climb the fastest, and any such things as profits that chanced to be in our way were pulled up by the roots or trampled down in our eagerness to get to the mountain quickly, all choosing the road of broad gauge and high speed. The sane man was not in the running, and the pessimist had flown to a place of safety. None dared even to look back upon such a commonplace thing as experience, remembering, I suppose, Lot's wife; while such philosophy as Longfellow's was mythical. (This reasoning applied to all manner of men, and not to lumbermen alone). Now we sit down, and, while we try to get a view of the mountain in our imagination away in the distance, we wonder if it is not really the myth, and we take a copy of Longfellow from our pocket and read:

"The heights of great men reached and kept,
Were not attained by sudden flight;
But they, while their companions slept,
Were toiling upward in the night."

The task before every Canadian is plain, now that we have awakened from our dream. We must remove all trace of that uncertainty which exists, and must do everything in our power to hasten the complete return of confidence, which is the advance agent of thrifty action. Have we not already many signs to show that confidence is again quietly slipping back and settling down in our midst? Show me the man who, a few months ago did not think about his bank account, if he had one, and wonder if it was safe in the bank, or if the bank was really safe? Where has that feeling gone to now? Confidence has returned and crowded it out, and it is going to crowd out many other things that have no place in a country like ours. We are going to awaken more fully before long, to realize that we are not so badly off as we had imagined, and then it will no longer be a question of whether our money is safe in the bank, but what use are we going to make of it by way of investments. Our fields are not being trodden down by invaders, nor is the ground being plowed up by their bullets, and yet perhaps we have been guilty of displaying less courage than have those whose country has been thus beseiged. It is said that the darkest hour is the one just before dawn, and so, since many things have already happened which throw unmistakable rays of light and hope upon the horizon, have we not sufficient reason for believing that we have already passed through that darkest hour, and that the dawn of a new era of prosperity is becoming visible? If you had been using all your energy and tact for the past five or six months in a vain effort to surmount or break down an unsurmountable and indestructible wall, and if, when you had become pretty well exhausted, you discovered that the wall was higher and stronger than ever, and exceedingly dangerous, what would you be thinking about doing next? Well, sir, that is just exactly what the aggressor is thinking about, but need we wait for this before we can welcome a return of confidence? I believe that when peace is restored we will see such a revival of trade as would justify the most sanguine hopes. But with our country unbroken and untrammelled, and with the necessary machinery and equipment lying idle, what are we waiting for? Are we going to allow others to reap the harvest which is soon to come, and which is rightfully our own? We have unlimited resources in our forests and our government needs the revenue from it, and, as a matter of fact, must have it. Is it reasonable, then, that we should be reconciled to let our mills remain idle while this timber is being shipped out of the country to be manufactured by our competitors and then perhaps shipped back into our own market, or if not, then into others which are within our reach? Never will we submit to such a thing. This is our opportunity to find our level, and if salaries, wages, or other expenses have been forced too high by the wave of optimism, as has been stated, to allow us to compete, then we must get them back again to a level with those of our neighbors. All extravagances, if such there are, must be sought out and eliminated, and whatever other obstacles stand in the way of our enjoying our full share of the trade which should come to us from other parts of the world, as well as from markets closer home, should now be removed. We never had such an opportunity as this for readjustment, for now that the eyes of the world are focussed upon something else we can make the adjustment quite unobserved.

### Resumption of Activity Expected

With the changes that must be brought about by the present unsettled conditions in the world, the extent to which we will be able to extend our trade is somewhat problematical at this time. I believe, though, that every indication points to a resumption of business at home with the opening up of the season, and while the volume may not be so large that it will startle us to begin with, yet I believe that the season will go out with much more reason for gratification than it begins with.

The farmers' wave of prosperity is now rolling toward them, and it is likely to roll high. This bids fair to stimulate them to such action as they have never been known to take for the production of a record crop. The prices which they are likely to realize for this crop, much of which will be shipped out of the country will bring new capital in, and we know that with this prospect before the farmer, or rather this certainty, he is going to take advantage of the situation and make improvements calling for large quantities of lumber. Then also, should we have an influx of people to the country, as some predict we will, if they are the right class, and settle upon the land, their requirements must be reckoned with, without making any calculations which are not fully warranted, though, I think that we have ample reason to believe that there is going to be a good demand made upon lumber before the season is out. Stocks in the yards are known to be exceedingly low, while at the mills they are not heavy. This, considered along with the fact that the eastern mills will probably not take out anything like their average cut of logs this winter, is bound to augur in favor of the coast mills, for we do not have to plan ahead for our logs, but can obtain them at any time of year, as the business comes, and indeed some of the larger logging operators are holding themselves in readiness for just this kind of an exigency.

But whatever may be done in the lumber business this year, caution will form a greater part of our discretion than it has ever done, and thus we are going to be led carefully and safely out of the wilderness. I believe that we are now pretty well agreed that it is stability that we want, and we are going to see more "working together" in the future, and working along lines of practical economy than there has been in the past, and by a careful working out of the costs of production, and the reducing of them to the lowest practical basis consistent with fair play, and then using a constant and consistent method of advertising, and educating the consuming public, not by depreciation of other materials which are being introduced to replace lumber, but by a meritorious campaign of advertising and making known the advantages which lumber possesses, and they are many, we will find that we do not have to take a second place to anybody in the manufacturing and marketing of lumber.

## Simple Advice Which Has Been Sadly Neglected

Editor Canada Lumberman:— Grand Forks, B.C., January 15.

The way to sell lumber is not to try to sell it at all.

The great difficulty with the lumber business at the present time, and for the last two years, in this province, has been the low prices received for the lumber. The question of most importance is, could the manufacturer have received a better price?

I believe that a better price could have been secured and that the fault rests entirely with the sales managers of the largest concerns. There is no doubt, and nearly every one believes that, the large mills, with immense stocks, and a large selling force, are the dominating factors in making the prices to the retailers.

It is credited to the sales managers of large plants that they have statistics showing the amount of lumber used, the amount manufactured, and the consumption of building material in different localities; also that their representatives advise them regularly of the stocks on hand in the yards of their customers. Why then should not the sales managers, when trade begins to develop, play a waiting game, instead of which, wires are sent to the travellers to grab everything in sight. In consequence of this the retailers stop buying.

The way to sell lumber is not to try to sell it at all.

The great problem is to obtain a profitable price for lumber.

The mill men of British Columbia are on a par with any lumbermen in the world. Large numbers of them have varied experiences in other countries, and, conditions being equal, the operating and manufacturing costs are so low as it is possible to make them.

The majority of them know to a cent exactly what each operation costs and can tell you in five minutes the costs of any operation to date. They use every endeavor to reduce the costs on each operation, but is it not disheartening to labor strenuously day and night to save ten cents per thousand feet on the operating costs, only to find that through the short-sightedness of the salesmen in trying to push sales too far, the price has dropped two dollars per thousand feet.

What is the remedy?

All the universities of today, and numerous technical and engineering schools are training men to reduce the costs of operations, which at the best could only be reduced a few cents per thousand feet. But how many of the universities and schools are training men to be the most successful organizers of selling campaigns, men who will seek out the competitive and non-competitive channels of trade, to gauge the consumption of lumber and attempt to create a market; men of highest caliber in the promotion of sales, and men imbued with the idea that the way to sell lumber is not to try to sell it at all.

The lumber business is like a ship sailing without a rudder. Lumber is a staple article, the same as steel and coal, and requires the same intensified salesmanship. There is no staple article which has more diversified uses. Let the sales managers take the wheel, and guide the ship to a safe harbor. Let them get together and form new charts of salesmanship. Let them exploit and market our lumber intelligently with this as their guiding star; quit trying to sell if you want to do business.

The manufacturer of today is necessarily a skilled bushman and mill man, and a good accountant, but he has no opportunity of telling the consumer about his particular kind of lumber. His chief aim has been confined to supervising the manufacture of lumber and to reducing the costs of operations to a minimum. This is no longer sufficient to meet the needs of the consumer. It is absolutely necessary to give the consumer information about wood and lumber in its various forms. This is specifically a department by itself. Here is the opportunity for the salesman. Let him first understand that he is selling a valuable product, then know what kind of grades are suitable for certain work, tell the consumer of the good and bad points about his particular kind of lumber, and keep constantly before him this one idea; if his firm is going to continue to operate, he must sell at a profit, not persist in forcing his lumber on the consumer and thereby cutting the price; remembering that he will ultimately sell more lumber by not trying to sell it at all.—W. Mark de Cew, Vice-President and Manager of the Western Pine & Lumber Company, Limited.

---

Reports from Vancouver state that the lumber business enjoyed quite a boom, comparatively speaking, during the month of December last, when business is said to have shown an increase of 500 per cent. over the same month of 1913. There was also during November and December a heavy export of cedar logs to the United States, which had formerly been prohibited. It is estimated that 25,000,000 feet of cedar logs were sent to United States Pacific coast ports during that period.

---

## B. C. Lumbermen Seeking Wider Markets

At a special meeting of the lumber committee of the Board of Trade, held recently at Victoria, B.C., it was decided that a memorial should be sent to the Provincial Government, laying before it the importance of finding markets for the higher grades of British Columbia lumber. One of the recommendations made is that samples of British Columbia lumber should be sent to the United Kingdom, Australia, Eastern Canada, China and elsewhere in charge of competent persons, who are familiar with the trade. It was also recommended that a commission should be appointed by the Board of Trade and that appropriations should be asked for from both governments and from lumbermen's associations to be used in securing greater publicity for the merits of British Columbia lumber.

---

## Mountain Lumber Manufacturers' Output Reduced

The 1914 output of lumber in the territory covered by the Mountain Lumber Manufacturers' Association in British Columbia, comprising most of the mills of the Kootenay-Boundary district, is estimated at 225,000,000 feet. Shipments during this period amounted to 180,000,000 feet. The stock remaining on hand after shipments is estimated at 280,000,000 feet. The output of this district during the year 1913 was 385,000,000 feet and the shipments of that year were 335,000,000 feet. In the production of poles and ties the output was not so greatly interferred with by the developments of 1914, as in the other branches of the lumber industry.

The value of the total lumber output of the district for the year is estimated at about $8,000,000. Logging operations during the present winter are reported as being light in comparison with those of previous winters.

---

## B. C. Trade has a Good Outlook

In the annual report of the chairman of the British Columbia Electric Railway Company, Limited, presented in December, the following reference was made to the lumber industry of that province:— "As soon as the seas are free of German cruisers and ships can be found to carry lumber at reasonable cost, British Columbian lumber exporters will be able to take advantage of the large demand existing for timber. The British Columbian lumber trade would also be beneficially affected by the successful marketing of a good grain crop in the prairie provinces, and as it is certain that the acreage under cultivation will very largely exceed that of any previous year, and fairly certain that high prices will prevail for wheat and oats, there are grounds for hope in this direction. Other industries in British Columbia are also similarly affected by the same or kindred causes. Whenever the revival comes it will, I feel sure, be found that this period of depression has been for the permanent good of the province, and that in several important ways new conditions have been established, enabling its sounder and more rapid development.

## The Market for Car Stock—B. C. Ready for Trade

Regarding your inquiry as to possibility of the coast mills supplying material for the railroad car builders, we will say that the supplying of this material is not a new thing on the Coast, as the mills here have been manufacturing this class of stock for many years, and in such quantities that the British Columbia Lumber & Shingle Manufacturers' Association saw fit some time ago to publish a sheet showing the standard dimensions, and have from time to time, as the market has changed, published what they call the Standard Railroad List, giving the list prices on all kinds of car material. This list gives prices f.o.b. the coast on car sills, standard car roofing and sheathing, car decking, car flooring, car lining, besides quoting on railroad ties and all kinds of timbers for railroad construction work.

The market on this character of stock has been very quiet for some time, and orders for car material have been so scarce of late that we are not surprised that there have been inquiries as to whether this stock is manufactured on the Coast. We have not had a speaking acquaintance with an order for this material in so long that we would probably pass as strangers if we should meet.

When the railroads start building again and are in need of rolling stock, we, like a great many of the other lumber people on the Coast, will be after their business, and we think that a large percentage of the orders will be placed on the Coast.

If any one doubts that the Coast mills can furnish car material let him shake something that looks like an order, and at the present time he would be swamped with replies.—Mainland Lumber & Shingle Company (A. C. Hannon).

---

The chief log scaler for the Province of British Columbia reports that the total quantity of logs scaled during the year 1914 was 612,533,720 feet, which is a decrease of about 200,000,000 feet, from the total of the previous year. During December the amount scaled was 40,214,889 feet or about one million more than during December, 1913.

---

Computed at average local market prices the values of Canada's crops in 1914 were as follows: wheat, $196,418,000; oats, $151,811,000; barley, $21,557,000; rye, $1,679,300; peas, $4,895,000; beans, $1,884,300; buckwheat, $6,213,000; mixed grains, $10,759,400; flax, $7,368,000, and corn for husking, $9,808,000.

# Great Britain Trade During 1914

## Declaration of War Created Memorable Situation in Wood Goods Business—High Prices and Strong Demand—Imports from Canada Benefitted

Churchill and Sim, London, Eng., in their annual wood circular say: The early days of August, 1914, will ever be memorable in the annals of British trade through the sudden outbreak of what is proving to be the greatest war which has ever been waged in the history of this, or, indeed, of any country. The first impression upon a trade drawing its supplies largely from Baltic ports liable to be blockaded, or through channels made dangerous to navigation was seen in the fear that the usual autumn and late summer supply of wood from these ports must be seriously restricted. At the same time the issue of large Government requirements fell upon the stock of wood stored in this country, which began to rise quickly in value. The uncertainty of the financial situation prevented buyers from entering into fresh commitments ahead, and it was not until early in September that, through the intervention of the Executive, and by means of the moratorium, stability, and consequently confidence, were re-established. Buyers then took heart of grace and began to operate freely. Thereafter purchases from the White Sea and from Swedish sources continued in enormous volume. Assisted materialy by the closing of the Russian Baltic ports, and feeling practically independent of Finnish competition, shippers were able to contract for vast quantities at ever increasing rates which were promptly acquiesced in by buyers, backed up as they were by an insistent demand, the result of an apparently insatiable consumption. While there was no hindrance to shipments from neutral countries, business continued to expand, but towards the end of November the German Government suddenly added both prepared and sawn wood to their lists of contraband, which had hitherto only affected the trade in firewood and pit props. Had this step been taken earlier a vast proportion of Swedish export would have been held up and great inconvenience would have resulted to buyers on this side. As it is, although several loaded steamers have been unable to sail, and many charters have been cancelled, a sufficiency of stock for winter requirements is assured, partly owing to the energetic action of the Russian Government in keeping the White Sea ports free of ice for some two months later than usual, and also to the fact that a considerable supply of spruce from the lower ports of Canada is still available for shipment. Except in some few cases, the principal sufferers will be the Swedish shippers, and as, apparently, diplomacy has been unequal to the task of getting the ban removed, a neutral nation, wishing to live at peace with both belligerents, will stand to be the greatest loser through her inability to market her productions of wood for the remainder of the season.

The quntity of wood imported into the United Kingdom in recent years was as follows:—

| | 1912. Loads. | 1913. Loads. | 1914. Loads. |
|---|---|---|---|
| Colonial Deals, Battens, etc. | 895,496 | 961,539 | 847,392 |
| Colonial Timber and Hardwoods | 53,109 | 39,656 | 37,051 |
| Foreign Deals, Battens, and Boards | 4,872,093 | 5,674,598 | 3,993,186 |
| Foreign Timber and Hardwoods | 3,783,423 | 4,340,665 | 3,091,597 |
| Colonial and Foreign Staves | 169,295 | 182,131 | 93,439 |
| Total, in Loads | 9,773,416 | 11,198,589 | 8,062,665 |

London buyers experienced a satisfactory year's business in 1914. At the close of the previous season, finding themselves heavily stocked, they were in no mood to contract largely ahead, and the buying power which was shown in the earlier part of this year was not so strongly in evidence as usual, except for prepared boards, which were freely sold at shippers' full prices. The available quantities of these never looked like congesting the market at any time. Intermittent sales to satisfy requirements as they arose continued throughout the spring and early summer months, but there was nothing in the state of the demand, coupled with the high range of values prevalent at that time to warrant the adoption of war completely altered the whole position, which immediately became very confused, and innumerable questions arose in connection with the cancelment of contracts, charters, etc., so that it was not until well into September that those in the general commerce of the country were able to adjust themselves to the new conditions. When importers had grasped the situation, however, it became clear that one of the finest results of the raising of new armies, the provision of vast quantities of material of all kinds, the protection of stores at the various depots, and the defence of the coast line, would be a call for huge quantities of sawn and unplaned wood, floated timber, etc. Experiencing gradually a ceaseless demand during the last four months of the year, the values of the sizes of stock particularly required have risen to what would be considered very dangerous levels in ordinary times. Scantlings especially were in great request, and sawmills have been working at high pressure and using large quantities of other dimensions to produce them, an expensive process which has had the effect of accentuating the rise in prices of red and whitewood of all sizes. The year ends with no appreciable relaxation in the demand, and practically no arrangements have yet been made between shippers and their customers for forward supplies from the north in 1915. The trade and the prospects for the future are entirely dominated by the one material consideration, that of the duration of the war. Such a position of uncertainty is bound to make importers very cautious of operating at the levels of prices established at present through the shutting off of great avenues of supply on the one hand, and an unprecedented rate of consumption on the other. The position of the market is, in a sense, unnatural, in that prices have been driven up owing to these special, and more or less temporary, circumstances.

Should the war last through another year, with Germany still in a position to enforce this disability, the position will become very intolerable for the Swedish shippers. The course of the wood trade in 1915 depends on the duration and intensity of the war, and expert opinion on that question will not be sought among its members. So long as it does last supplies must be restricted and extra demand will continue. When it comes to an end there must still be a period during which supply will be hampered by the dislocation of its machinery. During this period also an abnormal demand may be looked for for repairs of every description. After this the traders of the country must look forward to a period of financial exhaustion and the strictest economy, both national and individual. It seems probable that prices will be high in the first two of these periods and low in the third, so that the passage from the second to the third will be the difficult time.

Imports of Canadian stocks into London during recent years were as follows:

| | 1911. Pieces. | 1912. Pieces. | 1913. Pieces. | 1914. Pieces. |
|---|---|---|---|---|
| Pine Deals, etc., from the St. Lawrence | 400,000 | 590,000 | 508,000 | 249,000 |
| Spruce Deals, etc., from the St. Lawrence | 970,000 | 804,000 | 1,155,000 | 1,084,000 |
| Birch Deals, etc., from the St. Lawrence | 320,000 | 342,000 | 303,000 | 185,000 |
| Spruce Deals, etc., from New Brunswick, etc. | 436,000 | 490,000 | 468,000 | 835,000 |
| Birch Deals, etc., from New Brunswick, etc. | 249,000 | 400,000 | 373,000 | 385,000 |

| Timer. | 1908. Loads. | 1909. Loads. | 1910. Loads. | 1911. Loads. | 1912. Loads. | 1913. Loads. | 1914. Loads. |
|---|---|---|---|---|---|---|---|
| Yellow Pine from Quebec | .... | 74 | .... | .... | .... | 420 | .... |
| Red Pine from Quebec | .... | 118 | 2 | 27 | 154 | 15 | .... |
| Elm from Quebec | 1,162 | 1,397 | 1,611 | 1,718 | 1,059 | 2,952 | 601 |
| Ash from Quebec | 210 | 151 | 10 | 16 | 69 | 52 | .... |
| Oak from Quebec | .... | 69 | 112 | 108 | 34 | 210 | .... |
| Birch from Quebec | 899 | 1,524 | 1,215 | 1,619 | 1,246 | 1,761 | 806 |
| Birch, Nova Scotian, etc. | 310 | 487 | 238 | 138 | 225 | .... | 30 |

The season's importation of pine deals shows a marked falling off in quantity as compared with that of the year preceding. The scarcity of the best stock in Canada continues to drive prices higher year by year, until the point was reached some time ago when the rate of consumption was affected, and substitutes began to be sought for. The usual tests do not apply to this market, in that high values have not produced additional output, because the quantities available for export tend to diminish rather than to increase. The London trade, in the absence of strong competition, has been profitable to those endowed with the patience of engaging in it, and prices are practically free from even temporary set backs, being more or less independent of the vagaries of the freight market, which so intimately affect the values of other but lower-priced Canadian wood shipments.

Spruce deals, principally from the lower ports, have been more freely imported than usual. Early in the season, the expectations of shippers as to values were found to be over sanguine when put alongside Russian exporters' figures, and especially so when compared to quotations from Riga. Partly as a consequence of cheaper tonnage, holders have been able to take a stronger hand in catering for the whitewood requirements of the market than at one time seemed probable. When it was seen that the output from Riga was falling short, prices moved up until they began to feel the effect of Petrograd and White Sea quotations. The shutting off of the Russian Baltic competition caused by the outbreak of war was the signal for a pronounced rise in spruce values, which became sharply intensified by the holding up of Swedish shipments in the late autumn, by the great increase in consumption, and by a sudden rise of some 30 to 40 per cent. in tonnage rates. The close of the year, consequently, shows a strong and active market, with a still rising tendency.

There was no great enquiry for elm throughout the year, and the London trade in ash, birch and yellow pine timber is a small one, on account of the reduced stocks of these woods manufactured in Canada nowadays. Birch planks have sold well, the supply being smaller from the St. Lawrence, and amout the same as usual from the lower ports.

### British Columbian and Oregon Pine

British Columbian and Oregon Pine timber has made some progress in general favour during the year, and the London importation has been larger than usual. Purchased at a time when market conditions seemed settled, and the stock of long timber in the country required replenishing, rather more than was apparently wanted found its way to the United Kingdom in the first half of the year. The difficulty of forecasting the trend of the demand in other trades for large sailing ships, limited in numbers, which alone can carry the extreme lengths shipped from these sources of supply, gives to this market also a somewhat speculative character. Towards the end of July buyers found themselves with heavy stocks on hand, which, fortunately, the outbreak of war relieved them of the necessity of holding indefinitely, or of sacrificing at heavy losses. The great advance in grain freights in an indirect way has brought the value of the stock of Oregon Pine, large as it was, to a point more than corresponding to its cost, and the inability of steamers to handle the extreme lengths, coupled with a vigorous demand for the use of the wood from various sources, including that of coast defence, has established a strong market, which is still rising. The wood is liked for its consistent quality; the state of war, and the high values of north of Europe stock have driven its employment into channels of consumption monopolized hitherto by the cheaper and more accessible avenues of supply.

The stock of Colonial timber, deals, etc., at the public docks in London was as follows, at the close of the following years:—

| | 1910. | 1911. | 1912. | 1913. | 1914. |
|---|---|---|---|---|---|
| Pine Deals & Battens, pieces | 541,000 | 440,000 | 508,000 | 575,000 | 453,000 |
| Red Pine & Battens, pieces | 73,000 | 48,000 | 25,000 | 20,000 | 44,000 |
| Spruce & Battens, pieces | 704,000 | 640,000 | 543,000 | 884,000 | 688,000 |
| Red Pine Timber, loads | ..... | ..... | ..... | ..... | ..... |
| Yellow Pine, Timber, loads | 277 | 346 | 940 | 1,025 | 225 |
| Oak Timber, loads | 51 | 32 | ..... | ..... | ..... |
| Elm, loads | 1,095 | 775 | 433 | 1,730 | 2,006 |
| Ash, loads | 1 | 3 | 12 | 41 | 25 |
| Birch Timber, loads | 340 | 338 | 212 | 282 | 292 |
| Birch Planks, loads | 3,429 | 5,284 | 5,355 | 6,556 | 4,399 |

## CANADIAN PINE

### Manchester Statistics for the Past Year

The stock, consumption and import of Canadian timber, deals, etc., at Manchester docks, etc., was reported by Alfred Dobell & Company, Liverpool, on December 31st, as follows:

| | Stock | | Consumption | | Import | |
|---|---|---|---|---|---|---|
| | 1913 ft. | 1914 ft. | 1913 ft. | 1914 ft. | 1913 ft | 1914 ft. |
| Quebec Board Pine | 177,000 | 277,000 | 250,000 | 21,3000 | 94,000 | 313,000 |
| Quebec Square Pine | 5,000 | 5,000 | 6,000 | ..... | 3,000 | ..... |
| Quebec Red Pine | 3,000 | 500 | 4,000 | 2,500 | ..... | ..... |
| Oak, Canadian and U.S.A. | 55,000 | 54,000 | 136,000 | 106,000 | 172,000 | 105,000 |
| Elm Square | 13,000 | 15,000 | 42,000 | 49,000 | 48,000 | 51,000 |
| Birch Logs | 17,000 | 32,000 | 84,000 | 85,000 | 78,000 | 100,000 |
| Birch Planks | 94,000 | 104,000 | 144,000 | 226,000 | 149,000 | 236,000 |
| | Stds. | Stds. | Stds. | Stds. | Stds. | Stds. |
| Spruce Deals | 17,840 | 7,430 | 46,520 | 51,510 | 56,740 | 41,100 |
| Pine Deals | 2,280 | 970 | 6,350 | 7,010 | 6,690 | 5,700 |

### Clyde Shipbuilding Very Active

Calder, Henderson & Livingston, Glasgow, in their annual timber market report, say:—The result of the year's trading has on the whole been satisfactory, and it is a matter for congratulation that there has been no financial trouble in the trade notwithstanding the unprecedented crisis experienced in the early autumn.

Spruce was the chief item of interest concerned with the increased consumption, and values rose to record figures, the extra demand, caused through the uncertainty of supplies from the Baltic and the remarkable advance in freights, contributing.

The high freights subsequent to the opening of hostilities checked c.i.f. purchasing, pitch pine being the chief sufferer, but they helped spot values and also created further shipbuilding orders.

### Liverpool Statistics for the Past Year

The stock, consumption and import of Canadian timber, deals, etc., in Liverpool Birkenhead and Garston, was reported by Alfred Dobell & Company, Liverpool, on December 31st, as follows:

| | Stock | | Consumption | | Import | |
|---|---|---|---|---|---|---|
| | 1913 ft. | 1914 ft. | 1913 ft. | 1914 ft. | 1913 ft. | 1914 ft. |
| Quebec Square Pine | 9,000 | 8,000 | 3,500 | 9,500 | ..... | ..... |
| Quebec Waney Pine | 25,000 | 19,000 | ..... | ..... | 14,500 | 2,500 |
| St. John and Other Ports Pine | ..... | ..... | ..... | ..... | ..... | ..... |
| Red Pine | 4,000 | 3,000 | 1,000 | 1,000 | ..... | ..... |
| British Columbia and Oregon Pine | 390,000 | 265,000 | 176,000 | 246,000 | 472,000 | 121.000 |
| Oak, Canadian and U.S.A. | 91,000 | 74,000 | 115,000 | 45,000 | 187,000 | 28,000 |
| Oak Planks | 326,000 | 153,000 | 1,737,000 | 1.300,000 | 1,972,000 | 1,127.000 |
| Elm | 4,000 | 4,000 | 4,000 | 1,000 | 4,000 | 1,000 |
| Birch, Logs | 15,000 | 7,000 | 118,000 | 103,000 | 90,000 | 95,000 |
| Birch Planks | 148,000 | 144,000 | 446,000 | 454,000 | 483,000 | 450,000 |
| Ash | 15,000 | 26,000 | 140,000 | 216,000 | 144,000 | 227,000 |
| | Stds. | Stds. | Stds. | Stds. | Stds. | Stds. |
| N.B., etc., Spruce Deals | 7,730 | 4,520 | 34,710 | 37,740 | 38,690 | 35,540 |
| Quebec Yellow Pine Deals | 9,240 | 9,040 | 10,050 | 7,240 | 10,980 | 7,530 |

# WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted-Lumber

### Wanted

Ten cars clear maple strips, 1¼ x 3 inches, 18 inches and 27 inches long. Box 128, Canada Lumberman, Toronto. 3

### We Want to Buy

1¼ Birch, No. 1 C. & B, dry.
1½ S. Elm, No 1 C. & B., dry.
The Manufacturers' Lumber Co.,
3-4 Stratford, Ont.

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 7-tf

### Wanted

2,000,000 ft. White Birch Sqs. ⅞-in., 1-in., 1⅛-in., 1¼-in. up to 2-in. Lengths 2-ft., 3-ft., 4-ft. and 6-ft. Clear stock. Write M. Mitchell, Lucknow, Ont. 1 t.f.

### Birchwood Wanted

5-in. thick, 6-in. wide and up. Must be air dried 1912 cut.

LAMONTAGNE, LIMITED,
338 Notre Dame Street West,
1-3 Montreal, Que.

### Wanted To Buy
### Good Merchantable Spruce

| | |
|---|---|
| 100,000 ft. 2 x 6 | 50,000 ft. 3 x 8 |
| 100,000 ft. 2 x 8 | 50,000 ft. 2½ x 7 |
| 50,000 ft. 3 x 9 | 25,000 ft. 2½ x 6½ |

all 10 ft. and up long. Terms 75 per cent. cash against B/L; balance on arrival and inspection. Immediate shipment. State price f.o.b. shipping point. Write P. O. Box 1595, Montreal, Que. c

## For Sale-Lumber

### We Have a Full Stock

of Hardwood, Hemlock and White and Norway Pine Lumber, Norway and White Pine Piling, up to 60 ft. Keenan Bros., Limited, Owen Sound, Ont. 3t.f.

### We Can Cut To Order

Spruce or White Pine Timber up to 12 x 12. Inquiries solicited.

H. C. DUNBAR,
1 t.f. Haileybury, Ont.

### For Sale

400 Spruce Spiles, 60 ft. long, 7 in. tops. Also any quantity Spiles 35 to 50 ft. long. Prompt shipment.

The Northern Lumber Mills, Limited,
21-t.f. North Cobalt, Ont.

### Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

## For Sale-Machinery

### 75 H. P. Steam Boiler

with usual fittings, all in splendid order. Band rip saw, Fay & Egan make, shaving exhaust double fan, with quantity of pipes, etc. Flooring matcher, with Sherman flooring boring machine, also shafting, hangers, pulleys. Also a complete saw mill, capacity about 10 M., including good building if wanted. Cheap for cash, or terms, or Hardwood lumber taken in exchange. J. S. Findlay, Owen Sound, Ont. 3-10

### Rebuilt Veneer Machines

We have the following rebuilt Coe veneer lathes and clippers ready for immediate shipment:

Lathe, 50-in. swing, 88-in. knife, 6-in. spindles.
Lathe, 50-in. swing, 64-in. knife, 6-in. spindles.
Lathe, 50-in. swing, 64-in. knife, 5-in. spindles.
Lathe, 50-in. swing, 76-in. knife, 6-in. spindles.
Lathe, 42-in. swing, 52-in. knife, 5-in. spindles.
100-in. power clipper.
64-in. foot power clipper.

These machines are decided bargains and carry the same guarantee as we give our new ones. Prices on application.

THE COE MANUFACTURING COMPANY,
23t.f. Painesville, Ohio.

## Wanted-Employees

**Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents**

### We Want a Manager

for our Woodworking factory. Must be able to figure contracts, take charge of correspondence, direct factory foreman, and know when work is being done at minimum cost. Murray & Gregory, Limited, St. John, N.B. 3

## Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

Mill or General Superintendent wants position. Eastern and western experience. Splendid record. References. Box 131, Canada Lumberman, Toronto. 3-6

Band Saw Filer open for position. Used to cutting hard or soft wood in saw mill or factory. Box 124, Canada Lumberman, Toronto. 2-5

Lumberman wants position as manager of a retail lumber yard. Has had eleven years' experience. 29 years of age, married, sober. Can give best of references. North preferred. P. B. Starmer, 1217 Campbell Street, Kansas City, Mo., U.S.A. 3-4

Position wanted by manager. Have learned the business by practical experience, east and Pacific Coast. Managed all branches; expert on manufacturing, also mill designing and building. Good organizer and cost reducer. References guaranteeing efficiency and character. Box 130, Canada Lumberman, Toronto. 3-7

### Manager or Secretary-Treasurer

Position wanted by married man. Fifteen years' experience in every department of the lumber business. Successful manager of company manufacturing thirty million feet annually. Four years in wholesale and retail business as secretary and manager. Licensed log scaler. Can provide capital and furnish excellent references. Reply to Box 112, Canada Lumberman, Toronto. 24-3

## Business Chances

### Pulpwood Limit For Sale

A fine freehold virgin pulpwood limit for sale. Easy operation, rivers running to railway. For further information write to Box 122, Canada Lumberman, Toronto. 1 t.f.

### Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

### Timber Limits For Sale

Township of Mills, Berth No. 2.
Township of Pringle, Berth No. 3.
Township of Pringle, Berth No. 4.
Township of Lount, Berth No. 1.
Township of Lount, Berth No. 2.

Apply F. T. SHORT,
P. O. Box 763,
3 Barrie, Ont.

### Sawmill For Sale

Saw, Planing and Shingle Mill with lumber yard in connection. Building 46 x 70, steel roof. Capacity of sawmill, 12 to 15 M. per day. Lots of timber. A good retail business and a good business building summer cottages. This is a rare opportunity for a man with some push and a little capital to make some money. Good shipping facilities by water, 10 miles of the best of roads to Brucefield station. Owing to a combination of bad health, other interests and a heavy financial loss, I will accept any reasonable offer and give any reasonable terms. Will keep a half interest with working partner. Come and see this and go over the books. W. A. Mustard, Bayfield, Ont. 3-10

### Stock and Equipment of Retail Lumber Business For Sale

Tenders will be received up to the 8th day of February, 1915, for the purchase of the stock in trade, machinery and equipment of The Webb Lumber Company, Limited, Lumber Merchants, 224 Van Horne Street, Toronto.

Inventory values as of January 15, 1915:—

| | |
|---|---|
| Lumber ... ... ... ... | $18,498.39 |
| Machinery and Tools ... | 7,604.38 |
| Horese and Wagons ... | 2,159.99 |
| Office Furniture ... ... | 758.63 |
| | $29,021.39 |

This is an excellent opportunity to obtain an established lumber business, situated on an attractive site with railway siding. Advantageous terms can be arranged.

Further particulars on application to

RUTHERFORD WILLIAMSON,
Assignee,
3 86 Adelaide Street East, Toronto.

## Miscellaneous

### Tenders Wanted

on Canadian Cedar Poles. Specifications and information from Hydro-Electric Power Commission of Ontario, Purchasing Dept., Continental Life Building, Toronto, Ont. 3

### Wanted To Purchase

200 to 300 boom chains, ½ inch thick and nine feet long, with toggles and rings attached. Name best price for cash f.o.b. cars shipping point.

MONTEITH BROTHERS,
1-4 Rosseau, Muskoka, Ont.

### Agents Wanted

Large United States firm manufacturing steel wheels, farm trucks, handy wagons, logging and traction wagons, dump carts, engine trucks, etc., wants Provincial agents throughout Canada. Write stating what territory you can cover. Box 119, Canada Lumberman, Toronto. 1-3

### Agents Wanted

One of the largest firms on the Continent making motor trucks, wants sales agents for whole or part of Canada. Putting out a truck which represents one of the most important advances in truck manufacture. It drives from all four wheels and likewise steers and brakes on all four wheels. Company very strong financially. Box 120, Canada Lumberman, Toronto. 1-3

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

### Saw Mill Machinery For Sale

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

### Feed-Water Heaters

Feed-water heaters when properly constructed and applied undoubtedly effect a considerable economy of fuel, but as some more or less faulty ones are still in use it may be of interest to consider briefly a few of the points to be desired in their design, says the Timber Trades Journal. There are two kinds of feed-water heaters in general use. In the first, exhaust steam is employed, and in the second chimney gases. The former system is chiefly used in the smaller non-condensing plants, and with a well designed heater the feed-water can be heated to some 200 degrees before it enters the boiler, and at the same time it precipitates many of the impurities found in it. In the construction of heaters, bent and complicated forms should be avoided, straight pipes of ample capacity are to be preferred, and these should be arranged so that they can be readily cleaned and examined. They should also be arranged so as to have a rapid circulation, and have freedom to expand and contract.

In the form of feed-water heater for difficult waters which is in successful use, the water is heated to the precipitating point, and a chemical separation of impurities takes place. In accomplishing this exhaust steam is at first used.

after which the temperature is raised to the precipitating point by means of a live steam coil. After precipitation the water is passed through charcoal or other suitable material, by which a mechanical separation of the impurities is effected, the purified water then passes out of the heater into the boiler.

Whatever form of feed-water heater is employed it is important that provision be made to prevent any back pressure on the engine. This can be done by fitting a relief valve, so that when the pressure of the exhaust exceeds that of the atmosphere to any appreciable extent the valve opens a communication between the inlet and the outlet. The writer has know several cases of back pressure arising from the above cause, which remained undetected for some time. In conclusion, it should be borne in mind that the more wasteful a boiler is, the greater is the advantage of a good feed-water heater or economiser.

---

The largest forest in the world is in Canada. It is in the Labrador and Hudson Bay district, and is, roughly, one thousand by seventeen hundred miles.

" Yellow Pine Lumber and Bill Stuff up to 20 ft. lengths.

All Lumber Dressed or Rough. Our prices are right. Write, wire or phone for quotations.

# Hardinge Watchman's Clock

Considering that 70% of the lumber fires start in the yards, is it not good business to employ a night watchman and a Hardinge clock?

Stations may be placed in your yard at the end of each alley—they are weatherproof, tamperproof, and can be put up by your own men. No wiring is necessary and the clock is shipped with a certified guarantee from the factory for one year. **Every danger point in your plant is inspected hourly every night and you have your watchman's record of his night's work.**

No part of this clock is made in Germany—it is made in the United States. The clock is $36.80 and stations $3.90 each, F.O.B. Toronto. The Canadian Western Lumber Co., New Westminster, B.C. have 40 stations in their plant.

# Review of Current Trade Conditions

## Ontario

The most interesting and probably the most important feature in connection with the lumber industry in Ontario today is the extent of the logging operations at present being carried on in the woods. Up to date the weather has been favorable both for cutting and hauling. In the Georgian Bay district, the outlook is for an increased production on account of the great quantity of timber which was blown down in the fall of 1913, and which has to be taken out in order to avoid decay. Throughout the rest of Ontario, manufacturers are making extensive reductions in their operations and it looks as though one may balance the other. One hears from most manufacturers that the general output of Ontario will show a reduction. On the other hand the Department of Lands and Forests has made public an estimate to the effect that the output of pine on Crown Lands will be about 375,000,000 feet as compared with 360,000,000 feet last year, and that the output of spruce, hemlock and other varieties will total 84,000,000 feet as compared with 65,000,000 feet a year ago.

The present situation in connection with the trade in Ontario is that retail yards, and large consumers of lumber are getting along with small stocks. Enquiries, however, are becoming fairly numerous and are pointing to the probability of an active movement in the early spring. In southwestern Ontario activity is already commencing. A Toronto wholesaler reports that during the third week in February he had the best week's trade in southwestern Ontario that he ever had in that territory.

Much interest is taken in the probable action of the railway companies in regard to freight rates. An application is likely to be made in the near future to increase freight rates in eastern Canada to the extent of 5 per cent. in conformity with the increase which was recently permitted by the Interstate Commerce Commission of the United States in connection with the railroads east of the Mississippi River. Such an increase, although likely to be contested vigorously by shippers, might have the effect of inducing railway companies to spend liberal amounts on equipment, which would be an important factor in the return of normal trade conditions.

No one at present seems to be inclined to do more than express a hope that next summer will see an active demand for lumber. Yet the opinion is frequently expressed that one would not be surprised if such development actually came to pass. Unquestionably the situation, so far as stocks on hand, the probable output of the mills next summer, and the present prices of stocks are concerned, is one which will assist any development in the direction of trade betterment.

## Eastern Canada

According to a number of reports which the Canada Lumberman has received from manufacturers in the province of Quebec, the output of logs in that province during the present winter will show some reduction as compared with last winter. A few manufacturers report that they are taking out the same quantity of logs, while a number of others report that their output will show a decrease varying in different cases from 15 to 50 per cent. One of the most important manufacturers in the province advises us that in his opinion the outlook for trade in 1915 is good. Practically all of the reports agree in expecting a good demand from Great Britain and in looking upon the situation in connection with the United States and Canadian markets as rather doubtful. Stocks on hand at mill points are, if anything, somewhat heavier than a year ago, though in many important cases they have practically all been sold, but not moved. One of the most prominent and successful manufacturing concerns between Montreal and Quebec states that it expects that the 1914 average of prices will at least hold good and the same firm reports that the prices last year showed an increase of eight per cent. over those of 1913. This particular firm is taking out only two-thirds as many logs as last winter.

Most of the New Brunswick manufacturers report that they are taking out a heavier cut of logs this winter than last winter and that the outlook for 1915 trade in connection with the English market is the best that it has been in many years. It is believed also that the United States market, on account of the situation in Great Britain must show a similar upward tendency or go without Canadian lumber. Reports in regard to stock on hand at mill points vary greatly, but indicate a reduction in general as compared with last year. Nova Scotia manufacturers are looking for a good year's business in long lumber.

The demand for spruce at Boston is light, but prices continue firm. Frames are quoted at $24 for 8-in. and occasionally $25 for prompt delivery. Desirable sizes of random are selling at $21 for 2 x 3, $22 for 2 x 4, $20.50 to $21 for 2 x 5, 2 x 6 and 2 x 7, $22.50 to $23 for 2 x 8, $23.50 to $24 for 2 x 10 and $24 to $24.50 for 2 x 12. No improvement is reported in the demand for spruce boards. The demand for shingles at Boston is slow and prices are uncertain. A few large manufacturers of fancy white cedar shingles are asking $3.50 to $3.60 for their choice brands. Most of the business in extra grades of white cedars is at from $3.35 to $3.40. Clears are quoted at $3.80 to $3.90 and second clears at $2.50 to $2.65. The demand for lath has fallen off a little.

## United States

Indications of improvement in trade conditions are fairly plentiful in the United States. Large orders which are being received from Europe and the revival in the placing of contracts for rails and equipment by railroad companies are resulting in a much better general feeling. Throughout the country, business men are looking forward with greater confidence to the immediate future. Increased movement is continually noted in lumber, and, although margins are very small, the indications are that the demand will increase as the year advances. No actual business boom is looked for, however, until after the war is over. Many large lumber manufacturers are preparing for increased operations in anticipation of business which has not yet developed. Inventories have shown that there are no very large stocks anywhere, either at the mills or in country or city yards, or at factories, and accordingly spring is expected to introduce a brisk movement of stocks. The trade in northern pine and hemlock has been handicapped by severe winter weather. Retailers and manufacturers, however, are putting in some stock to fill up their assortments. Orders for spring delivery have been secured in quite encouraging volume, consumers apparently being of the opinion that current prices are as low as they will ever be.

Pacific Coast manufacturers are again commencing to saw, anticipating a return to normal trade conditions. A good deal of curtailment, however, is still noticeable, and stocks are likely to diminish if a fair movement develops.

Reports from Minneapolis state that the lumber trade is picking up in an encouraging manner. Optimism is spreading and there is a steady conservative growth in the volume of business. Retailers are commencing to consider the purchase of stocks for spring requirements. A much healthier tone is shown throughout. Merchants are counting upon good spring business as farmers have sold their grains at good prices. The hemlock market has shown no particular activity, but the outlook is considered reasonably favorable. Stocks are not over large and curtailment in the woods is quite general. Prices are well maintained.

## Great Britain

Encouraging reports are published in the leading English financial papers of recent date, all indicating that experts in the financial world of Great Britain are expecting a good year during 1915. Most of these expectations are based upon a favorable turn in the war situation in the near future. Under such conditions they feel confidently that prospects are excellent for this year's commercial and industrial progress.

An immediate result of anything in the form of a decisive action in the western theatre of war, involving a withdrawal of German forces, would be a great demand for commodities in France, and as France is a rich country this would be a very encouraging factor in the renewal of trade activity. The same authorities consider that even with the heavy demands which are to be expected from Belgium, France and Great Britain for the use of capital after the war, the price of money will not be sufficiently high to hamper business.

Fairly active trade is reported in the London spot market. Exceptionally mild weather has prevailed, and at latest reports goods were still arriving from the north of Europe as well as Canada, although in limited quantities on account of the very high freight rates. It is expected, however, that lower freight rates will prevail before very long. Prices still continue to show an upward tendency and it is an easy matter to dispose of stock of almost any size. Deliveries are still above normal, particularly planed goods. Packing case makers are very busy with special orders, in addition to home trade requirements. Everything combines to produce a very satisfactory and hopeful trade situation at present. The demand, moreover, is expected to increase whenever stocks commence to arrive more plentifully. The deliveries at London docks for the week ending January 9th amounted to 4,128 standards as compared with 3,422 standards during the

(Continued on page 62)

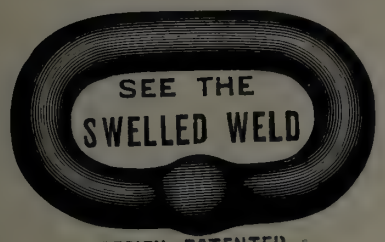
# "Dreadnaught" Steel Loading Chain

## Does not break at the Weld

MADE IN CANADA

MADE IN CANADA

5-16 in. Dreadnaught Steel Loading Chain, pulled to stock break at 9230 lbs., proving the weld the strongest part of the link. Tested at Syracuse University, September 27, 1912.

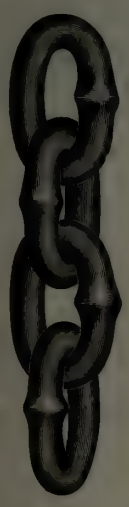


DESIGN PATENTED

Note the increased material at the weld, strengthening the only possible point of weakness, by the addition of 25% more stock and thereby adding 25% more strength. In our chain the weld is actually the strongest part of the link.

DESIGN PATENTED

The strength of a chain is that of its weakest link, therefore, a chain for loading purposes is required to have all links perfectly welded and of uniform strength. Our chain is formed and welded on automatic machines, with pressure and current so regulated to give each weld exactly the proper amount to assure a perfect joint.



The material used in the manufacture of Dreadnaught Steel Loading Chain is the highest grade of steel, made to special analysis to meet our requirements. Samples of chain are constantly being taken from the welders and tested to destruction. Unless samples show a stock break, that run of chain is rejected. Every pound of chain is actually proof tested before being shipped, this test being higher than the safe working load.

All chain is sold under our absolute guarantee of weld perfection, with replacement free of charge if it breaks at the weld.

Combined tensile and distortion test, proving weld perfection

corresponding week of last year. At Churchill & Sim's recent auction sale, 3 x 11 third Quebec yellow pine sold at £17 15s. and £17 10s. Fourths brought £14 5s. and £14 10s. Quebec yellow pine, 3 x 10 and 9 sold at £16 15s. and 3 x 8 at £15 15s. and £15 10s.

At Liverpool there continues a steady demand for spruce deals. Recent arrivals are finding a good market. A large proportion of the current business is for government requirements. An unsatisfactory condition exists in connection with the railroads which are not able to deal with traffic as fast as it presents itself. At a recent date forty large steamers were lying in the north end docks waiting for berths to discharge their cargoes. The explanation given is that there is a shortage of labor. No transactions in spruce deals "to arrive" are reported as yet, chiefly because of the difficulty in securing tonnage. There is very little to report in connection with cargoes of spruce deals on a c.i.f. basis. The chief arrivals of late have been small parcels by liners, which are disposed of readily at full values.

# Market Correspondence

**SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD**

### Ottawa Trade Expecting a Fair Year

Ottawa, January 25 (Special to the Canada Lumberman):—Many of the men who have been in the lumber camps since early last fall are now leaving and in their places are going teamsters and others necessary to haul the logs down to the lakes and rivers preparatory to the thaw in the spring. The roads in the woods are fairly good. Recent heavy falls of snow have helped conditions there. Though trade is fairly quiet in the Ottawa district at present lumbermen are setting their machinery in order, so as to be ready for business later on, which they hope will be fairly good in spite of the war.

A matter that is interesting lumbermen here and elsewhere is the announcement, from authoritative sources, that the Canadian railways will shortly apply to the Railway Commission for permission to increase their freight rates by five per cent. Recently the Interstate Commerce Commission of the United States allowed the railways in that country east of the Mississippi to advance their freight rates by five per cent. However, if the application is made here next month, as reported, a vigorous protest will be made by manufacturers in general of whom lumbermen form a considerable part.

There is considerable dissapointment felt here over the action of the Australian Government in advancing the tariff on a number of articles imported from Canada, such as timber and manufactured woodenware, etc. Two years ago Canada offered to make a reciprocity pact with Australia and Sir George Foster, Minister of Trade and Commerce, visited that country with a view to putting the machinery in motion that would result in the completion of the arrangement. Now that Australia has increased her tariff on many articles imported from other countries; in some cases as high as 50 per cent., there is considerable surprise and disappointment felt in official Ottawa; also among manufacturers throughout the Dominion.

Mr. George H. Millen, formerly joint manager of the E. B. Eddy Company, of Hull, was appointed president of the company at a meeting of the directors a few days ago, to succeed the late Mr. W. H. Rowley, who died suddenly in Toronto two weeks ago. Mr. John Taylor, formerly assistant secretary of the company, has been made secretary and elevated to the board of directors.

Matters of interest to lumbermen were discussed at the annual meeting of the Commission of Conservation and the Canadian Forestry Association held in Ottawa last week. In spite of the war it was decided by the directors of each body that the good work they exist for must be continued without any curtailment.

last there have been three arrivals, viz., the Schrs. "Inga" from Bear River, "F. C. Lockhart" from Shelburne, and the "Maple Leaf" from Halifax, with cargoes of 85 M., 348 M., and 253 M. ft. respectively. These had all been sold some months previously to arrive: the first two at $34 for merchantable and $26.50 for second quality, and the last $34 and $27, this latter cargo being mainly composed of second quality. These receipts have fully supplied the market for the time being, but other shipments are known to be on the way. Spruce—The "Inga" above referred to also brought some 78 M. ft., and 26 M. ft. hemlock. This was also contracted for, to arrive, at $27 for shippers, and $20 for the hemlock. Further receipts are still required, and we can recommend consignments. Pitch pine—No receipts. Shingles—No arrivals to report during the fortnight, but stocks of all grades are ample for present requirements. Shooks—No arrivals. Wood hoops—Some 761 bundles have come to hand by the London steamer for dealers' account.

## Montreal Trade Expecting Good English Demand

Montreal, January 23rd (Special to the Canada Lumberman): The New Year has not opened very brightly for local firms. Business is quiet. On top of the small turnover, there have been some failures in the contracting and lumber sections which have affected a large number of lumbermen. This is the dark side of the picture. On the other hand, it is more than likely that Great Britain will be a heavy buyer in this market, particularly of spruce, for which there is a considerable demand in the Old Country. The extremely high rates and scarce tonnage are the discouraging features, and the stiffness of the rates may be judged from the fact that 100s. per standard was refused by one of the steamship companies. Nevertheless, prospects are satisfactory.

The Pulp and Paper Association have had under construction the proposed increase in railway freight rates on pulp, newsprint, and lumber shipped from Canadian points to the United States. The increase is at the rate of 5 per cent. and as there is a large quantity of these commodities shipped from Ontario and Quebec, it follows that the additional cost would be considerable. Thus the freight on newsprint would be 18.9 cents per 100 lbs. in place of the present rate of 18 cents. At a meeting of the Association held on January 19 at the Montreal Board of Trade, which was attended by representatives of the Manufacturers' Association and the Montreal and Toronto Boards of Trade, the question was discussed at length, but the representatives of the associations and firms interested decided not to take action pending the receipt of further details as to the effect of the rates upon the industries. The meeting was accordingly adjourned.

# New England Trade—A Trying Year

### Financial and Political Influences Depressed Trade—War Increased Disturbance—Conditions Now More Promising

All we can say about the lumber business for the year 1914 is that we think it has been a series of disappointments to about everyone who has been active commercially in this section of the country. We think the volume of sales has been curtailed in most places from 20 to 35 per cent. Money has, until recently, been tight, and many parties without the best of bank credit have had difficulty in meeting their obligations. Prices on most classes of merchandise have sagged strongly during the year, and we have noticed in the last few weeks there has been a marked drop in the value of foodstuffs, although this class of merchandise has, until recently, held very strong compared to other merchandise.

We cannot help but feel that the Government of the country is to quite an extent to blame for the existing conditions, of course, excepting the war in Europe which had quite a detrimental effect here in the United States; although we think it is quite noteworthy that the United States handled its finances probably better than most any other country in the world during the few months following the outbreak of the war. Nevertheless, credits were curtailed, banks stopped loaning on mortgages and it was very difficult for financiers and large corporations to refund bonds and obligations falling due. However, considering the very troubled times, we think this section of the country is to be congratulated on having handled finances in general business as well as it has.

#### Politics a Source of Disturbance

We attribute the business depression first, to the change of Government at Washington and the inevitable stagnation and trouble which always follows a drastic reduction in the tariff on imports, and of course, later to the European troubles; but we cannot help but feel that the Republican Party is to quite an extent responsible for the stagnation which has been caused, because, when the reading on the wall was perfectly clear, tending to show that the inhabitants of the United States believed that the tariff was too high, and that the existing tariff helped to foster monopolies which took more than their share of the profits, still they were unwilling, as a whole, to meet the issue squarely and put in operation a reasonable reduction in the tariff which would have tended largely to obviate the necessity of a change in Government, which followed their refusal to meet the public demand. In this country it seems to be necessary that the people of the country must from time to time take a dose of physic as it were to clear their constitutions, and it seems to the writer as though this dose of physic is always administered by the Democratic Party. It is unpleasant, but necessary, and we are happy to say, generally lasts only through one administration.

We also attribute the present commercial troubles of this country in part to the unwillingness of some of the railroads to play fair with the public and use their powers in a reasonable and businesslike way for the general good. Instead of that, they apparently, in some cases (we are happy to say not in all cases), took advantage of their power to squeeze the public through combinations which were unwarrantable and which tended to reduce greatly the value of their securities, thus making it necessary for the Government to take drastic measures to prevent anything of this sort in the future, and, as in all such cases, the Government probably went too far and crippled the railroads by their very excessive supervision. We are happy to say that now they seem to be letting up a little and are giving the railroads a little more chance to do business on a paying basis.

#### Monetary Conditions Improving

The monetary conditions have become much easier here. Banks are accumulating surplus which always follows a sharp season of depression, and we have heard of some cases recently where savings banks and other institutions are beginning to place money on real estate mortgages, and in other ways to help legitimate trade, and we have no doubt that there will be a gradual improvement, as there always has been in the past, after a long season of depression; and it certainly seems reasonable to think, barring any further unexpected disturbances like the war, that we ought to see a gradual improvement during the year 1915.

We think that when the annual statements of many corporations come out they will show at least a lack of profits for the year, if they do not show quite a shrinkage. We know quite a number of the banks have thought it proper and desirable to charge off against their surplus account many possible and probable losses which will result from the 1914 business and think it will be a season of general readjustments of values.

There is one thing rather noteworthy in connection with the general happenings of the year 1914 which we have not touched upon, and that is, whereas, there has been so much stagnation and such hard times during the year, there have been in the lumber business at all events, in this section, comparatively few failures. Many people have needed help either from their bank or their creditors, and have gotten that help and have not been obliged to go into insolvency, or probably in most cases, to ask general extensions, and while we feel in a general way that the year has been a very trying and unsatisfactory one, we have found comparatively very few really bad bills which should be charged off on the year's account for 1914. While we do not look for much improvement during the remainder of the winter, we do hope and expect that there will be a gradual improvement throughout the United States during the year 1915.—Shepard & Morse Lumber Company.

## Ontario

The Rainy River Lumber Company, Limited, have changed their head office from Rainy River, Ont., to Fort Frances, Ont.

P. & J. Shannon, Biscotasing, Ont., have purchased the sawmill and lumber business of Booth & Shannon, Biscotasing, Ont.

The H. & H. Box Company, Limited, has been incorporated in Ontario with head office at Pembroke and an authorized capital of $100,000. The provisional directors are A. J. Thomson, W. S. Morlock and R. C. Berkinshaw, all of Toronto.

The Hydro-Electric Power Commission of Ontario, Continental Life Building, Toronto are open to receive offers and quotations for delivery of cedar poles during 1915. The requirements call principally for 35 ft. and upwards, 7-in. tops.

The Canada Furniture Company, Woodstock, Ont., who are putting up a $15,000 addition to their factory report that they have stopped work upon it temporarily. The building will be completed in the spring and will be four storeys, 100 x 60 ft.

Tenders are being called for, by the secretary of the Board of Control, Ottawa, closing February 23rd, for the supply of lumber for 1915. Specifications will be on file at the office of the city engineer and at the office of MacLean Daily Reports Limited, 25 Charlotte Street, Toronto.

Among the Canadian firms which have received orders for saddle trees arising out of the war are the Guelph Lumber Company, Guelph, Ont., who have already manufactured a large number of saddle trees under a sub-contract from one of the firms which contracted for the production of complete saddles.

The Gulf Pulp and Lumber Company, Limited, has been incorporated at Ottawa. Its head office will be at Montreal and it will be capitalized at $250,000. Frederick E. Ritchie, lumber merchant of Montreal, is one of the incorporators. The company will carry on a general lumber, pulp and paper business.

The Hydro-Electric Power Commission of Ontario are calling for tenders for a supply of Canadian cedar poles. They will probably want altogether about 20,000 Canadian cedar poles from 25 to 70 feet in length. The majority of these will be 30, 35 and 40 feet long and must comply with the Commission's specifications which can be had upon application.

## Eastern Canada

The sash and door factory belonging to Gingras & David, 6255 de St. Real Street, Montreal, was recently destroyed by fire. The loss is estimated at about $50,000.

A report from Amherst, N.S., states that the Rhodes Curry Company, Limited, have purchased the Wellington Tillmore property and are now operating a mill upon it.

The Brompton Pulp & Paper Company, East Angus, P.Q., report that they have recently commenced running their 162 in. news machine, which started up well and is running satisfactorily.

The Maple Leaf Lumber Company, operating in the vicinity of Londonderry and Folleigh, N.S., report that they now have over 300 men in the woods and expect to have an output this winter of 12,000,000 ready for shipment in the early spring.

The Wilson Box Company, Limited, St. John, N.B., have recently completed a new sawmill at Bonny River, Charlotte County, N.B., where they have important timber interests and where they intend to saw box boards chiefly. These boards will go to their box plant at Fairville, N.B., over the Shore Line Branch of the C. P. R.

The Graddon Lumber Compny, Limited, Montreal, has been formed with a capital of $50,000, for the purpose of acquiring the assets and liabilities of the Graddon & Owens Lumber Company. The incorporators are Messrs. C. B. Graddon, J. Buchanan, F. Wigg, W. T. Owens, and E. A. Wright. The charter gives power to manufacture and deal in lumber and timber, and also to deal in timber limits.

Application will be made to the Quebec Legislature during the present session for an act to incorporate "La Societe des Reserves hydrauliques du Saguenay." The object of the incorporation is to establish and operate dams, dykes, etc., on the Peribonka, Chicoutimi and au Sable rivers for storing waters and regulating the flow in order to facilitate the floating of timber. The applicants for incorporation are J. E. A. Dubuc, J. E. Cloutier, R. Belleau, A. Bechard, A. Langlais, and J. F. Grenon, all of Chicoutimi, P.Q.

## Western Canada

A report from New Westminster, B.C., states that the Mackie Mill & Mercantile Company intended to commence the erection of their new shingle mill

during the third week in January. The plant will have an initial daily capacity of 200,000 feet and will employ about 35 men.

The Cameron Lumber Company, Victoria, B.C., recently secured a contract for supplying 4,000 tons of box shooks for the English market.

The Erie Lumber Company, Limited, has been registered in British Columbia as an extra-Provincial company. The head office of the company is at Cambridge, Minn., and the provincial head office at Nelson, B.C. Mr. C. R. Hamilton, Nelson, is attorney for the company. The capital of the company is $200,000.

C. Allison Peck, Hillsboro', N.B., is considering the purchase of a hardwood flooring plant at that point. He will equip the plant with woodworking machinery to replace a plant which was recently destroyed by fire. A new engine to run a rotary sawmill will be purchased, also various parts of machinery which were destroyed.

### Calendars for 1915

Graddon & Owens, 11 St. Sacrament Street, Montreal, have sent out a fine office calendar to their friends in the trade. The type is very large and the calendar has attached to it a fine colored picture reproducing a beautiful scene in the Trossachs.

A fine group of photographs reproduced in color, representing various stages in logging operations, with an attractive colored picture of a logger in the centre of the group, decorates the calendar sent this year by John Donogh & Company, wholesale lumber dealers, Traders Bank Building, Toronto, to their trade friends. The calendar is a large one, and very suitable for office use.

The Finger Lumber Company, Limited, The Pas, Manitoba, manufacturers of Saskatchewan white spruce, have sent out a beautiful calendar for the year 1915, to their friends in the trade. The decoration of the calendar is an attractive colored painting of a young lady. The picture is mounted in a buff colored frame on a soft green background, giving an exceptionaly good effect.

West, Peachey & Sons, Simcoe, Ont., have sent out an attractive calendar for the year 1915, to their friends in the trade. The large colored illustration on the calendar represents this company's alligator steam warping tugs at work, showing very clearly how efficient they are either for towing booms of logs or for transporting themselves over portages from one inland water to another.

One of the most attractive calendars that we have had the pleasure of receiving this year comes from the New Ontario Colonization Company, Buffalo, N.Y., whose mills are located at Jacksonboro, Ont. The calendar is decorated with an exceptionally attractive colored picture entitled "Shooting the Rapids," which represents a lumber jack riding a log through a swirl of water, mist and grinding logs. The picture is very stirring and full of human interest, especially to all those who are acquainted with the lumbering industry.

Wistar, Underhill & Nixon, wholesale lumber dealers, Real Estate Trust Building, Philadelphia, Pa., have sent a very practical calendar for the year 1915 to their friends in the lumber trade. A separate sheet is provided for each week of the year and each business day has a generous sized square of blank paper upon which to enter engagements, memos, etc. The number of days from the beginning of the year is also indicated in connection with each date. The pad is neatly mounted upon a red board bearing the company's name and address in white letters.

A handy little souvenir diary has been sent out by F. Reddaway & Company, 595 St. Paul Street, Montreal, the well-known manufacturers of Camel Hair and Camel Brand belting. Those who are fortunate enough to receive copies are certain to appreciate them greatly. In addition to the diary for the year, the book contains interesting information regarding the various products put out by this company and a number of useful colored maps at the back of the diary. A number of pages are included which are ruled off conveniently for keeping a cash account.

### Lumber and Pulp Statistics

J. Grove Smith, of the Canadian Fire Underwriters' Association, in a statement regarding the lumber and pulp industries, states that the capital investment in pulp and paper manufacture in Canada has increased in the last decade from $20,000,000 to $60,000,000, and the value of the product from $9,000,000 to $28,000,000. The amount of pulp manufactured into newsprint in Canada per annum is 480,000 tons, and the finished product would fill 16,000 standard railway cars every year, making a train 110 miles long. The cords of pulpwood consumed in the country amount to 600,000 per annum, and the logs, if placed end to end, would reach a distance of over 34,000 miles.

Circular saws of paper are being increasingly used in England for the cutting of thin plates of wood. Veneers made in this way are so smooth that cabinet-makers can use them without further planing.

# The Moreau Barks 3 Cords per Hour

The Moreau Barking Machine is something quite different from any other rossing device. It has a capacity of from 2 to 3 cords per hour and only requires 6 H.P. to operate it, and it eliminates the time consuming and costly operation of boiling logs.

The Moreau Barker only diminishes the log 18 per cent. as compared with a loss of 25 per cent. to 30 per cent. by other barkers.

The Moreau is an Automatic Barker and its working efficiency is not dependent upon the operator. This feature is particularly advantageous when the logs to be barked are crooked.

Used in conjunction with a pulp wood plant the Moreau Barking Machine will show surprising results. A valuable feature of this outfit is that it is readily portable to any point in the woods—at the railway siding or wherever shipping facilities are offered. Its own weight is sufficient to hold it in place when in operation.

The illustration shows the Barker at work by a siding with logs being loaded direct from the machine to the cars.

# Lace Leather is Never "Short"

You take no chances on G & K Lace Leather either in quality or quantity.

Every piece is measured accurately by our "Turner" measuring machine, which is operated by a "sworn" measurer and regularly inspected and sealed by Massachusetts State Authorities.

G & K Lace Leather incorporates the essential qualities of uniform thickness, great tensile strength, unusual pliability and long life under severe usage. The sides are closely trimmed and the hand cut lacings are well balanced.

All quality and measurement statements and guarantees apply to each brand of G & K Lace—the Royal Worcester, which is a mechanical lace, the strongest and most durable of its kind—the Kelton-Bruce Original Indian Tanned, the standard of tanned lace leather since its inception in 1871—the Crescent, a rawhide lace of excellent quality.

Be sure to look for the Trade Marks, they are your protection and guarantee of accurate measurement, superior quality and absolute satisfaction.

# The Ideal Window Frame Machine No. 3

## Every Window Frame Problem is Easily Solved by the Ideal No. 3 Machine.

**Does all the work perfectly, quickly and economically. Runs like a top—Easily Adjustable—Substantially Built**

**Is Designed for**

**Mortising Sash Pulleys Cutting the Pockets Dadoing Plowing the Grooves Ripping Bevel Edges of Sills Cutting Frame Lumber to Length Saving Floor Space Saving the Carrying of Lumber from One Machine to Another General Variety Saw-table Work Ripping, Cross Cutting, Dadoing, Etc.**

All the work of Cutting Pockets and Pulley Mortising is automatically gauged by stops, thus insuring greater speed and accuracy.

Each of the Three Features of the machine **are entirely independent** of each other, so that **the Pockets, Pulley Mortises and Gains** (for heads and sills) may be worked **without a single change or adjustment** to the machine, and at **one handling of the jambs.**

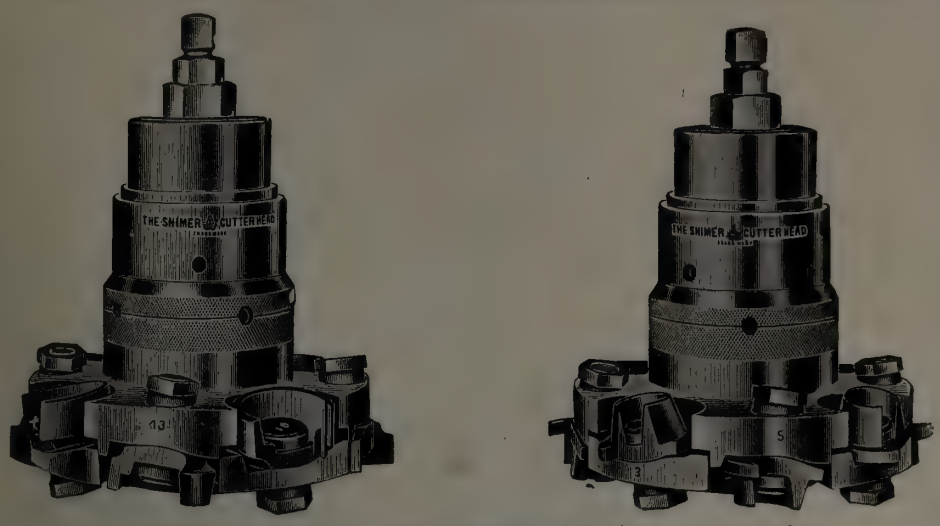
We guarantee this machine to have from 50 to 100% greater capacity than any other machines on the market.

Write for our 56 page Catalogue No. 10, describing this and nine other machines for Window Frame Work, Dadoing, Miter Work, Saw-guards, etc.

# The Phillips Manufacturing Co.

Orlando, Fla., U. S. A.

# THE SHIMER CUTTER HEADS



**The "Shimer Limited" with expansion $72.46 per set, complete.**

# There Are No Delays

when an order for mill work comes into a planing mill where Shimer Cutter Heads are in use. No matter whether the order is for Flooring, Ceiling, Siding, Wainscoting, Ship Lap, or Door and Sash mouldings, there is no waiting until a high priced man forms cutters to do the job. The Shimer Heads are simply slipped on the spindles and the machine starts in to turn out uniform patterns of quality work.

When it is necessary to sharpen cutters there is none of the usual delay in touching up the shape, because Shimer Cutters never change their shape when being sharpened.

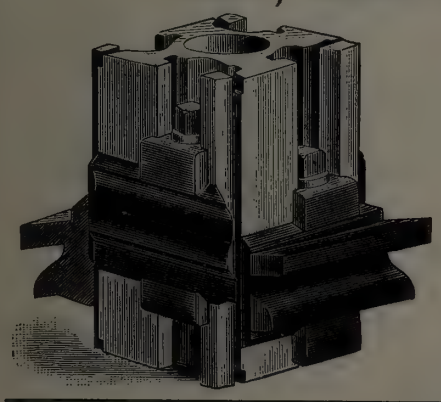
The Permanent Shape of the Shimer Cutter insures uniform patterns —insures that patterns made to-day will match with those made at any time in the past or future. It prevents all over-runs and left-overs from getting into the scrap pile and insures their sale along with the next batch put through the machine.

The saving in time of the men and machines—the saving in stock and the fact that many pieces of a cross-grained nature are saved from the offal pile, all work together for the prosperity of the mill man.

Shimer Cutter Heads must be seen at work to be appreciated. That's the reason we are so free in offering trial. Their good points have been demonstrated in so many thousands of mills that we welcome your order for a set on trial.

Send it today.

## The Shimer Combination Head for Doors, Sash, Blinds and Mouldings



The Head illustrated herewith is intended more particularly for the mills which make only a few mouldings or Door and Sash patterns and change work several times a day.

The outfit consists of one Combination Head with one set of Sash Bits, one set of Door Bits, one set of Cope Heads and Door Cope Bits and two Sash Cope Bits for the lower Door Cope Head.

The Bits are quickly changed and set to the gauge, when the Door and Cope moulds or the Sash and Cope moulds will match to a nicety. Bit can also be adjusted for different thicknesses of Door and Sash mould.

Price of outfit complete $47.31, guaranteed to be made of the best materials and sent on trial.

## Our Popular Cutter Heads

Figs. 202 and 203 are the leading tools, having Conical Duplex Bit Seats and The Shimer Cutter Head Expansion. Flooring Bits will work from 13/16 to 1½-in. in thickness with tongue and groove proportions expanded to suit.

Price, net, complete with one set of flooring Bits, the gauges for setting the Bits and wrench ... ... ... ... ... ...$40.95

Extra Bits for Flooring ... ... ... ... 11.44

Extra Bits for ceiling ... ... ... ... .. 10.40

With 4 bits to each head

## Jointer Heads

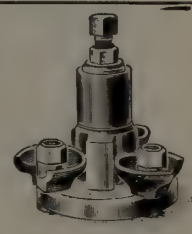
Figs. 54 and 55, with four Bits in line of work, shear the cut downwardly to insure a sharp and clean upper edge. They cut clean and free and are shipped out under our guarantee to give satisfaction.

Price, Heads, complete with Bits for 15/16 to 1¼-in., net only ... ... ...$31.20

Extra Bits 1½-in. face, the set ... ... . 10.40

Extra Bits, 2-in. face, the set ... ... ... 12.48

## O. G. Batten Heads

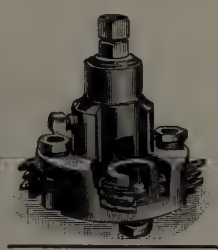


Figs. 48 and 49 represent our best tools for this work, having 3 Bits in line of cut so arranged upon their seat inclines as to protect all but cutting edge against friction and wear.

Price, two Heads, complete with Bits, net only ... ... ... ... ... ... ... ...$31.98

Extra Bits, each, net ... ... ... ... ... 2.08

## Double Ceiling Heads

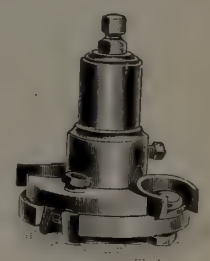


Figs. 45 and 46 are made in solid section, steel forged, with Bits of special design to cut two tongues on one edge of board, and two grooves on opposite edge, to be re-sawed for two thin boards tongued and grooved. Very complete.

Price, with one set of Bits, net ... ...$40.94

Extra Bits, per set of (8) ... ... ... ... 16.64

## Ship Lap Heads

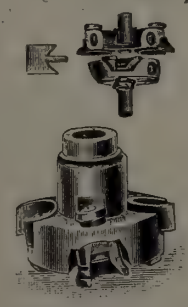


Figs. 38 and 39 are made of steel forgings, in solid section, designed especially for heavy duty. The bit seats have the latest improved slants to provide free cutting edges, and we sell them at the following low and net prices:

Heads with one set of Bits to work 15/16 to 1½-in. thick, net ... ... ... ... ..$34.84

Extra set of Bits ... ... ... ... ... 11.96

## Door, Sash and Coping Tools



That save all the hand fitting. No changing of patterns, therefore, no trouble in framing door and sash parts when matched with the Shimer Cutter Heads.

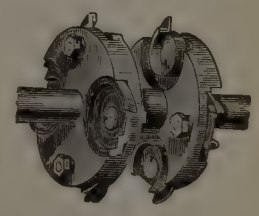
DOOR AND SASH HEADS

Fig. 82, solid flange, Door Head .....$10.75
Fig. 84, Expansion Door Head ..... 13.35
Fig. 86, solid flange, Sash Head ..... 9.75
Fig. 206, Expansion Sash Head ..... 12.35
Bits to work 1-in. to 1¼-in. Doors, 4.. 7.28
Bits extra to work 1 to 1¼-in. Sash (2 Moulded Bits, $4.30; 2 Rabbeting Bits, $2.86) ... ... ... ... ... ... ... ... 7.16

COPE HEADS

Fig. 83, Cope Heads (2) ... ... ... ...$12.90
Coping Bits, each ... ... ... ... ... ... 1.43

## The Shimer Box Board Matching Heads



make a uniform cut and close fit, as well after years of use as when new, with no friction upon the Bits. For thicker material the Bits can be expanded.

Price for two Cutter Heads to match ⅜ to ½ inch, $29.15.

We also furnish when desired a Yoke Mandrel with self-oiling boxes, boxed f.o.b. Galt, $11.05.

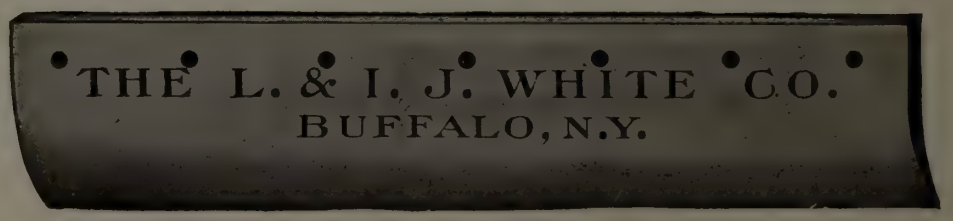
Veneer

## Machine Knives

The kind that you say "Same as Last" when you order the second time.

## Cut Prices!

Did you ever buy Government Bonds at less than par? Certainly not. Why? Because you knew what you were getting and knew what they were worth.



Stave

## Buy Right!

When you buy **WHITE KNIVES** you buy quality—real quality and not the kind that has to be sold at a few cents less. There isn't a shaky piece of timber in the whole lot and we are prepared to prove that they will wear from 10 to 50 per cent. longer. Ask us why. We would just like the chance to tell you.

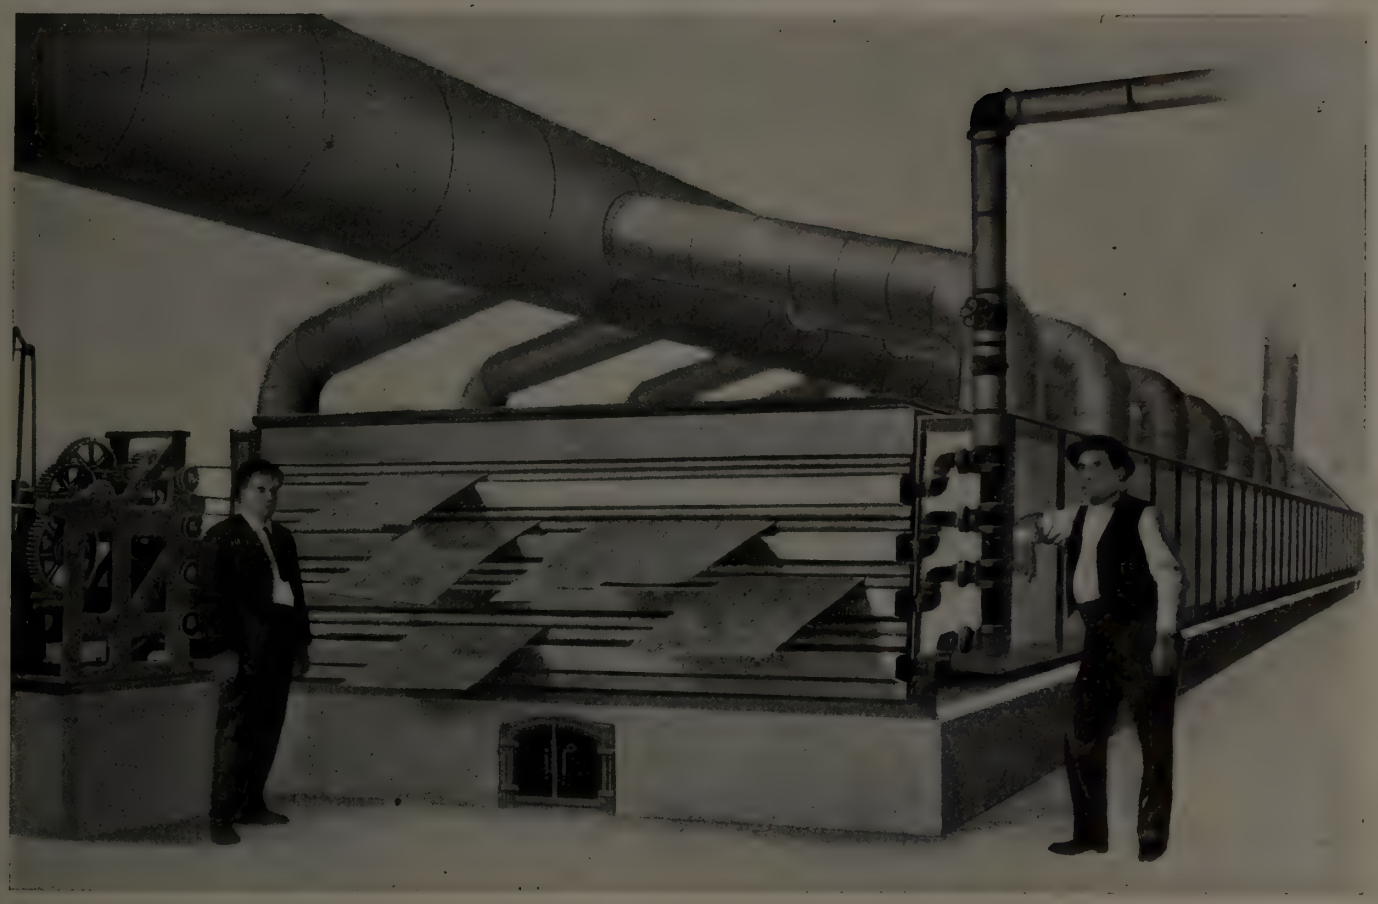
Moulding

# Veneer Machinery



The Coe Automatic Roller Dryer is designed and built entirely of steel, iron and asbestos which construction gives it unusual durability and ability to withstand the severe service of being operated under the high temperature necessary to dry veneers thoroughly and rapidly.

The Coe dryer will handle any size or thickness of veneers of any species of wood. It will deliver them bone dry, commercially flat and even without splits, wrinkles or checks or without discoloring, glazing or polishing their surface.

The green stock is fed into one end of the dryer and it travels in one direction to the other end of the dryer where it is delivered bone dry ready for the glue room, stockroom or shipping.

Coe dryers have been designed and built for handling all kinds and thicknesses of stock and for all capacities.

## The Coe Manufacturing Co.

**Painesville, Ohio, U. S. A.**

*Established 1850*

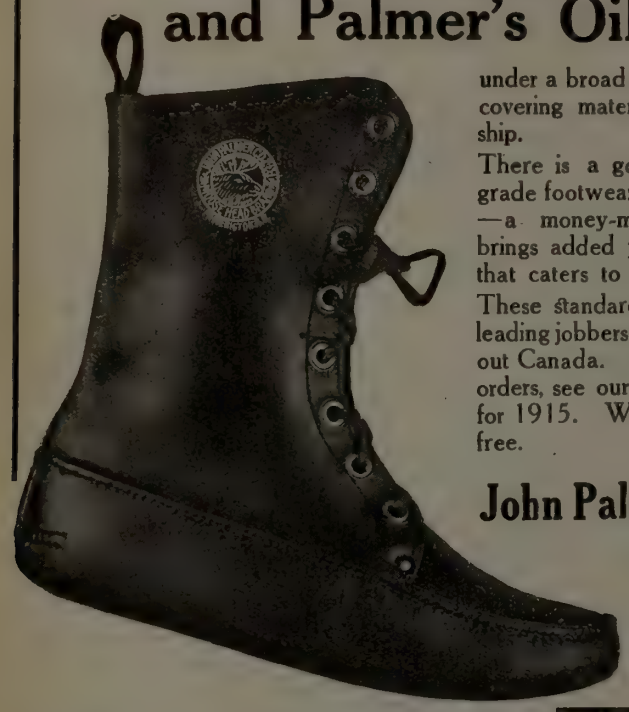
***The oldest and largest manufacturers of complete veneer mill equipment in the world.***

# DEALERS:--These Lines
## Make Money and Build Prestige

Our high-grade line of oil-tanned, waterproof shoepacks, mocassins, larrigans, sporting boots, etc., etc., is making money for many dealers, and has built up a big demand all over Canada and the United States.

Nearly forty years we have been supplying the famous

## "Moose Head Brand" and Palmer's Oil Tans



under a broad guarantee of quality covering materials and workmanship.

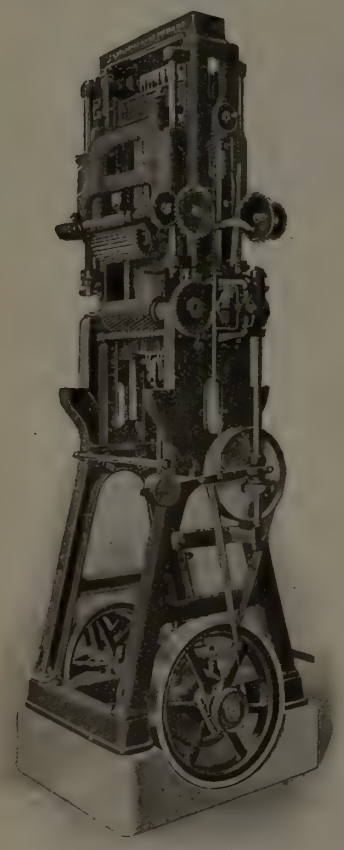
There is a good market for this grade footwear all the year 'round —a money-making trade that brings added prestige to the store that caters to it.

These standard lines are sold by leading jobbers of footwear throughout Canada. Before placing your orders, see our samples and prices for 1915. Write for Booklet L, free.

**John Palmer Co., Ltd.**

**Fredericton, N. B.**

(Canada's largest manufacturers of oil-tanned footwear)



# BOLINDERS'
## Saw Mill and Woodworking Machinery

meets the most exacting requirements of the up-to-date Saw Mill man.

Designed to meet the present day demand for machines capable of rapid and economical production with a minimum amount of labor.

The Bolinder line includes **High Speed Log Sawing Machines, Double Edgers, Cross Cut Saws, High Speed Flooring and Matchboarding Machines, Planing Machines, Automatic Boxboard Machines, Circular and Band Resaws, Special Patented Tonguing and Grooving Cutters, Etc.**

Ball Bearings used throughout.

# EFFICIENCY

Manufacturers do not hesitate to discard expensive machinery when the time and labor wasted on such old equipment more than off sets the cost of new machines.

Every file should be considered as a machine. At a certain point in its life on any work it becomes so worn that its efficiency is impaired. It is slow—dull—inaccurate. The extra time it wastes in performing its work would more than pay the cost of several new files.

In the interest of efficiency and economy, it should be replaced with a new file—just as old machines are replaced with new equipment.

This "discard" point in any file varies with the skill of the worker and the character of the work. It is very late in the

## "Famous Five"

KEARNEY & FOOT
GREAT WESTERN
AMERICAN
ARCADE
GLOBE

(*Made in Canada*)

because they are designed for a long period of maximum service.

They are made by the world's greatest file producers—with an output of 60,000,000 per year. They are manufactured on machines designed to make a tooth that will remove stock rapidly. They benefit by all the skill, experience and knowledge gained in our 50 years' experience. Every step in their manufacture—from steel to finished file—is controlled by us.

Before any of the "Famous Five" leave our works, they must pass tests far more strenuous than any practical work they ever meet.

YOU, too, can cut down your filing cost by using the "Famous Five"—and replacing them promptly when they have lost their efficiency.

## "Wilson Bros." Flooring and Trim

"Wilson Bros." stamped on every piece of this flooring stands for Quality. Look for the name.
Hardwood and Pine. **Interior Finish of All Kinds.** Also Hardwood Veneer Doors to detail.
We are equipped to fill large or small orders on short notice. Write us for prices.

**Wilson Bros., Limited - Collingwood, Ont.**

# When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

## "ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.
When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

***Prices and Particulars on Request.***

## J. L. Goodhue & Company, Limited

DANVILLE - QUEBEC

OUR long experience with the particular requirements of the Lumber Industry of Canada places us in a position to give you exactly what you require for your particular work.

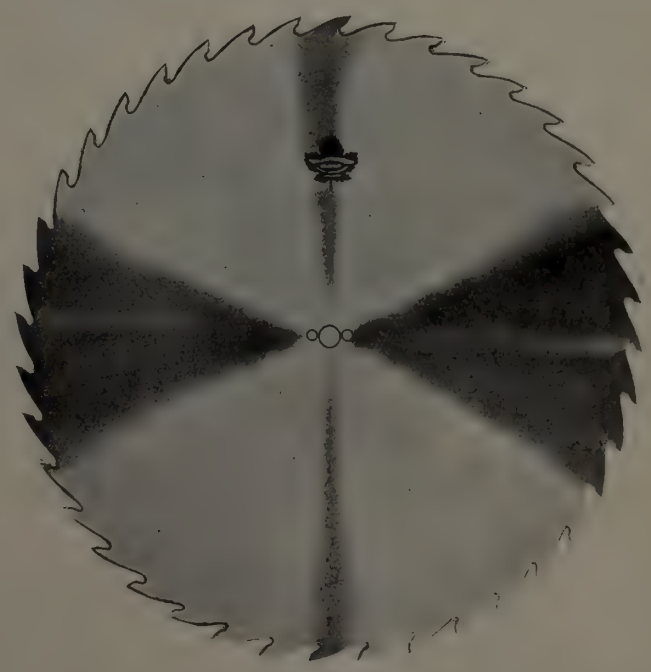
We have lately opened a branch at Hull, Que., where a full line of cross-cut saws, bits, holders, etc. is carried. A fully equipped repair department is in connection for the convenience of our many customers in that section of the country.

Our Vancouver Branch is similarly equipped.

You are assured ***Prompt Attention*** and ***Immediate Delivery.***

## "MAPLE LEAF" SAWS

**MADE IN CANADA FOR 50 YEARS**



## SHURLY - DIETRICH COMPANY, LIMITED

HULL, QUE. GALT, ONT. VANCOUVER, B.C.

# Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

# Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

**W. W. Cory,**

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

# The Steam Tension Band Mill

It is called the steam tension mill because the tension is maintained by steam—the most sensitive form of tensioning which has been devised.

The result of this is a great saving in saws—**several users of the machine have run through an entire season without cracking a single saw.**

But in addition to raising and lowering the top wheel by steam, there is a separate cylinder for operating the top guide, and these two cylinders make ours an entirely steam-operated mill, and, therefore, exceptionally fast.

It is made with 8 ft., 9 ft. and 10 ft. wheels, and will stand thorough investigation.

Write for bulletin and list of users.

Move to attack

The Eiffel Tower is now the central military wireless station in France. From it radiate the messages, the commands, that direct the whole army of France battling on its 320-mile front. A break-down in that station of any of the apparatus would mean little short of a catastrophe for the allied armies.

**Sturtevant**
(REG. CAN. PAT. OFF)

## Fans

are relied upon by the French Government to keep the set in operating condition. They were bought at the outbreak of the war to cool and ventilate the powerful spark gap of this apparatus.
Sturtevant Fans are very largely used in the lumber industry for conveying sawdust and shavings and for mechanical draft.
All Sturtevant apparatus is high-grade and is accepted as superior apparatus.
Catalogues on engines, turbines, mechanical draft, fans, fuel economizers, motors, drying apparatus, dry kilns, or lumber apparatus sent on request. Mention this paper.

"To be, or not to be, that is the question.
Whether 'tis nobler in the mind
To suffer the slings and arrows
Of outrageous fortune,
Or to take arms against a sea of troubles."
—Hamlet.

**Hamlet the Prince of Denmark is a character which**

every budding actor aspires to play. The late Sir Henry Irving certainly inspired many to study the works of Shakespeare and those who were privileged to hear him in Hamlet's famous soliloquy are not likely to forget it. Most of us have been in a state of doubt on many occasions and said to ourselves: The question is:

**TO BE, or not TO BE**

We can serve the interests of our customers who use Babbitt Metals and recommend without any hesitation.

# The Connecting Link

Way back in 1880 the **Wanted and For Sale** columns of the Canada Lumberman and Woodworker were used extensively by the lumbermen of Canada for the purchase and sale of timber, lumber and machinery.

Time has but served to enhance the value of this medium, until to-day the **Wanted and For Sale Department** of the Canada Lumberman has become a national market.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide field, the percentage of waste circulation for advertisers has been reduced to a minimum.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

***The Mark*** ***of Quality***

IF A STEAM FEED didn't lose so little time in "turning the corners" or make such good time in the little logs, its installation in place of a friction feed would still be worth while, because in thus relieving the engine of so great a friction load, the production could not help but be measurably greater.

The steam consumption is not necessarily larger.

You owe it to yourself to consult our Engineering Department, and get the Bulletin.

# Get The Most Out Of Your Machines and Men

with

# "AMPHIBIA"

# Waterproof Leather Belting

If the power generated in your plant is being transmitted practically without loss to your various machines you are getting the most out of those machines and men and your plant is operating at maximum efficiency.

The one belt that will promote these conditions in a saw or planing mill is "AMPHIBIA".

This belting is made from selected hides that are given a secret waterproof tanning. The best of the butt is then selected for "AMPHIBIA" belting—all weak spots are culled out by experienced men.

The manufacture of "AMPHIBIA" belting is carried on with extreme care and rigid inspection. Every joint is made firm as the leather itself. The finish on "AMPHIBIA" is one that makes the belting grip the pulley and prevent slipping.

## To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

# "Pick of the Pines"

at the Minneapolis Lumber Exposition commanded the instant attention of every dealer who inspected the wonderfully attractive stock shown in the Armory. Clearly it was worth an examination. This exhibit conclusively demonstrated that Arkansas Soft Pine generously repays the care and attention manufacturers lavish on it. The exhibit—part of an ordinary shipment of yard stock, such as hundreds of dealers receive every day—was rated an example of Millwork of Unusually High Character. In brief

# Arkansas Soft Pine Made a Hit

## High Grade Millwork Brings Out Comment

First Dealer, after a critical examination of **Arkansas Soft Pine Stock**—"That is **bully lumber,** but do you suppose they sand all the finish?"

Second Dealer—"Search me. It **looks like it was worth** sanding."

Attendant—**"That is just average millwork**, gentlemen, and your comment regarding it is in line with the average opinion expressed regarding it. **That satin-like surface is the hallmark of Arkansas Soft Pine."**

Salesman—"Men have stood at the tail end of our planers watching the stock come through and have accused us of having a device for sanding concealed in the machine. Your mistake is not an unusual one."

Dealers who want trim that is ready to use.

Who want material that satisfies the particular customer.

Who want lumber that will take any manner of finish, want Arkansas Soft Pine.

If you are not getting the stock to which your customers are entitled, get in touch with the mill that can supply you to the best advantage.

# The Moreau Barks 3 Cords per Hour

The Moreau Barking Machine is something quite different from any other rossing device. It has a capacity of from 2 to 3 cords per hour and only requires 6 H.P. to operate it, and it eliminates the time consuming and costly operation of boiling logs.

The Moreau Barker only diminishes the log 18 per cent. as compared with a loss of 25 per cent. to 30 per cent. by other barkers.

The Moreau is an Automatic Barker and its working efficiency is not dependent upon the operator. This feature is particularly advantageous when the logs to be barked are crooked.

Used in conjunction with a pulp wood plant the Moreau Barking Machine will show surprising results. A valuable feature of this outfit is that it is readily portable to any point in the woods—at the railway siding or wherever shipping facilities are offered. Its own weight is sufficient to hold it in place when in operation.

The illustration shows the Barker at work by a siding with logs being loaded direct from the machine to the cars.

# Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the townships of Burpee, Falconbridge and Street, for small mills.

**We have the following Sawmill Machinery for sale:**

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 8-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

## FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

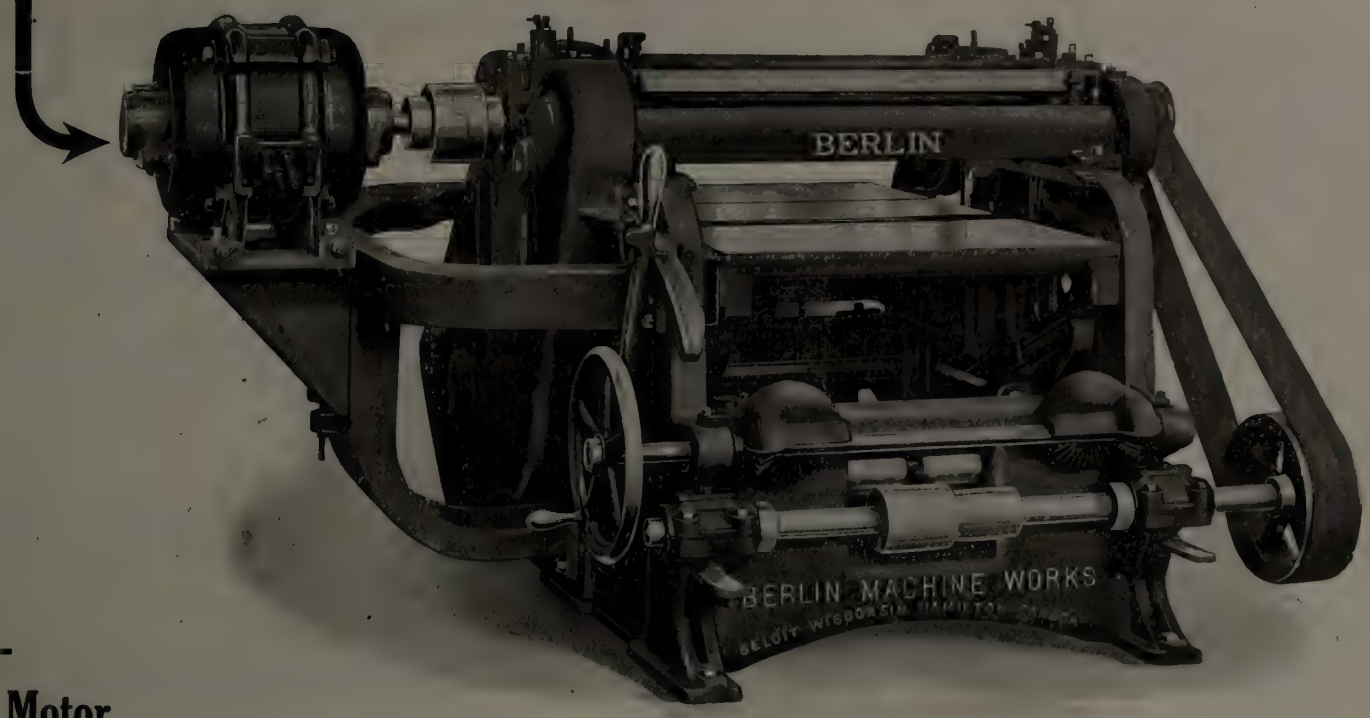
# A Steady Economical Surfacer Drive



**The Direct-Connected Motor**

## On the Berlin No. 156 Cabinet Single Surfacer

drives both cutter-head and feed steadily at their most efficient speed. The proper ratio between cutting and feed speed remains constant over the widest range of load. Uniform surfacing is assured.

The machine with motor so applied, is made independent of line or counter shafting and belts. The best use of floor and overhead space is allowed. Location can be made most convenient to cut down the cost of handling stock.

With line shaft drive in use the belt friction load of tool and countershaft varies from 25 to 40 % of the total power required. Motor drive saves both this loss and belting costs and their strain and wear on cylinder journals.

Moreover the power bill stops whenever the machine is shut down, and even additional minutes of power cost and operators' time are saved through easy starting and stopping.

And the machine itself may be equipped with the head, top in-feed roll and chip-breaker especially designed to handle your particular work. But your greatest saving will be on work requiring the smoothest finish, for with round head equipment carrying thin steel knives which may be ground and jointed on the machine, sanding all your stock won't be necessary.

We'll explain this when you give us your address and tell us the class of work you have to do.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 35 Toronto, February 15, 1915 No. 4

# Why Not Get Your Customers' Cash?

Next to selling lumber, the most important feature of the lumber business is to get paid for it. There is no one selling lumber today who does not know this, but there are a great many who do not live up to it; and the peculiar part about it is that neither they, nor anyone else, can give any reason for their unbusinesslike methods. In times like the present, when the volume of trade is greatly reduced and money is of great importance to those who can get it, the man who is not paying sufficient attention to his collections is in a bad position; while the man or the firm who have always made a point of going systematically after the money owed to them, find their business in a comparatively satisfactory condition. Throughout the lumber trade, from the manufacturer to the retailers' customer, the situation is much the same, although it becomes less business like the nearer the transaction approaches the consuming customer.

Most of the successful manufacturers and wholesalers conduct their affairs upon a basis of granting a two per cent. discount for bills which are paid within 15 or 30 days of delivery, charging the net price for bills paid between that date and 90 days from delivery. After that, the custom is to charge interest, sometimes at a specified rate, sometimes at the current bank rate. This practice has become an established one in most parts of eastern Canada and is one which, when followed up persistently gives good results. In the first place, it depends for its value upon systematic sending out of invoices at the same time as delivery is made, or very shortly afterwards, and careful attention to the office books with a view to notifying each customer periodically of the condition of his account. There is no reason why this systematic way of looking after accounts should not be followed regularly by all lumbermen, but the truth of the matter is that there are many who do not conduct their affairs in this way, and who, sooner or later, suffer as a result.

---

The retailer is the chief sinner in regard to collections. There are retailers and retailers. Some of them do their business in a most up-to-date manner and could give a good example to many wholesalers and manufacturers; but there are others who seem to think that their particular cases are exceptions to the general rule; that for some hazy reason their customers are not of the same stripe as other retailers' customers and that they have some peculiar inherent right to the use of the retailer's money, without paying interest, as long as they wish to keep it. How this belief grew up in the first place is not difficult to discover. The farmer, who is the most important customer of many retailers, used to get his money at long intervals. He could not get it until his grain was sold; but he could not sell his grain unless he had money to put up a barn or a granary in which to store the grain until it could be marketed. So, someone had to finance him. One would suppose that it was the natural duty of the banks to attend to this end of the business, and so it was; but the banks in most cases were called upon to finance the farmers until they had purchased their farms, stock, machinery, seed, etc., and paid the wages of their farm hands. By the time the farmer came to need money for his granary he had, in a good many cases, reached the limit of his credit with the bank, or thought he had, and had also begun to realize what it meant to be paying interest on borrowed money. Moreover, he had found out that the way to get money for nothing was to go to a retail lumberman and order lumber, knowing that, in many cases, the lumberman would not press for payment until the grain had been marketed, and that in some cases he would not even be very pressing then. The retailer, unless he was a natural business man, soon got into the way of thinking that this was the right way of doing business, and that there was nothing for it but just to hand out the lumber when it was wanted and hope that the customer would pay for it before long.

This is the most unsatisfactory feature of the whole lumber trade and the least excusable. Why, even a farmer should not conduct his business in a reasonably businesslike manner and proportion his annual expenditures to his income in such a manner as to have a bank account upon which he can depend so as to take advantage of the discounts permitted by firms which are ready to give a discount for cash, is difficult to understand. In the earlier days it might be natural that a farmer should not develop business instincts of this order, because he was far removed from business centres and did not have any good examples before him to study; but nowadays he has examples of this kind before him continually and should be made, by the retailer to realize that when he gets lumber he must be ready to pay for it or to pay interest at the bank rate. We believe there is a way in every instance to make the retailers' customers live up to this manner of doing business. No matter how confirmed they may have become in their loose way of settling accounts, they can be brought to see things in the proper light if a persistent effort is made; and there is no question that such an effort is well worth while.

---

The making of an effort to teach customers the habit of meeting their obligations regularly is where so many retailers fall down. Everyone knows just how this works out. We all know in our own private affairs that some of the merchants from whom we buy expect prompt payment and generally get it, and that others adopt a careless attitude and give us the impression that they can wait indefinitely. The result is that they do wait and are generally the last to be paid. In a certain district, there is a contracting carpenter who is doing a very good business. He is a good carpenter and also a pretty good business man. When he has done a job he sends in a bill without any delay and soon afterwards he makes a call, ostensibly to look over the work and see whether there is anything more required. He puts in a casual remark that there is an account to be settled and that he hopes to have, at least a little on account before very long. He drops around frequently thereafter; that is to say, once every two or three weeks. This man is not in a very large way of business and can pay personal attention to his affairs in this way; but if he were so busy as not to be able to do this he coul dget similar results by correspondence followed up in a persistent manner.

In the same district there is a plumber who does things in a very different manner. One of his customers, who is trying to get his debts settled systematically, has been wanting a little work done for a couple of months and has also wanted to pay part of his account for

work already done. This plumber, not that he is too busy to look after things systematically, but because he is not of a systematic nature, has been putting off doing the little bit of work that is wanted, and has been promising to send in a bill, "some day soon." He even went so far recently as to say that he would make out the bill that night and send it by mail the next day; but this was over a month ago and still the bill has not arrived. Naturally this customer pays the persistent carpenter and lets the plumber wait indefinitely. All customers, as a matter of course, adopt towards their merchants just the same attitude as the merchants adopt towards their customers. If the merchant realizes this and makes it the backbone of his business methods, he will find that much of the difficulty of collections is done away with.

---

Wherever it is possible in a district to get the customers into the habit of paying cash, this should be done. A month ago we published in this journal a most interesting and valuable article upon this subject written by Mr. H. R. Isherwood, of Sawyer, Wis. We have discussed the plan adopted by Mr. Isherwood with other lumbermen and all have thought highly of it; agreeing that it is a system which can be put into practice without much difficulty, and that its benefits must be immediate and great. The innovation adopted by Mr. Isherwood is that he not only gives a two per cent. discount up to 15 days after purchase, but he induces many of his customers to pay cash when they give an order, by giving a discount of 4 per cent. for cash paid then. He gets the use of the customer's money instead of the customer getting the use of his money. Having the customer's money he feels well disposed towards him, and does his very best for him. The customer feels that he is in good standing with the merchant and visits him freely. The result is an all-around good feeling which encourages trade and makes business a pleasure for the retailer. This retailer has practically converted a large credit business into a cash business and has made himself solid with every farmer and worth while customer for miles around. We would suggest that our readers take into consideration the advisability of following Mr. Isherwood's plan. If they want to enquire into it fully they will find it described in detail in the Canada Lumberman of January 15th, or if they wish to write us we will gladly give them full particulars.

---

# Confidence Returning in the West

With their customary breezy optimism, the lumber trade of British Columbia are taking comfort in the reappearance of definite orders for lumber which have recently come out in pretty substantial quantities. For many months past nothing in the way of news has come out of British Columbia that was not discouraging. The situation went from bad to worse, until it reached that stage where everyone had a chance to devote time to studying the reasons for the depression more completely than usual, and there was a rather surprising unanimity of conviction that some of the lumbermen had more to do with the depression than they had formerly thought. In fact the situation was very tersely put by a prominent banker, who, referring to British Columbia industry and trade in general recently said that the war had not been responsible for the present conditions, but had simply revealed them.

Those who have been keeping closely in touch with British Columbia developments for the past three or four years, will immediately agree that there is more than a little truth in this criticism. The present situation commenced to develop in British Columbia several years ago when men began to turn over real estate at a profit in an unreasonably short space of time. The speculative fever of the West became intense and continued so for much too long a period. It seemed to have behind it all the great natural wealth of the country and the prospective continual influx of many thousands of settlers to the prairies and to British Columbia for years to come. The crisis fortunately arrived ahead of the war, but the war showed up the whole unsound situation in all its natural ugliness, as nothing else could have done.

The lumber industry, caught in the great speculative movement, followed the current to the end. It had its examples of bad financial management, unwise sales management and improvident over-production. It went along with little consideration of the day of reckoning. It was lifting itself by its boot straps, so it thought, but it was really doing nothing of the sort. It was simply digging its own grave and getting ready for the funeral. The great surprise is that after such a funeral there should already be promise of a resurrection.

It is to the infinite credit of many British Columbia lumbermen that they have set themselves so definitely and with such determination to the task of searching out the cancer of their trade and cutting it out. They have freely admitted their shortcomings and have reformed their ways almost over night. We only hope that their conversion is genuine and permanent. They have set themselves also to search out the markets of the world for British Columbia lumber. They have found a way of selling large quantities of stock to Great Britain. They are selling many shingles and a fair amount of lumber in the United States. They have representatives touring the republics of South America, confident of getting new trade. They are planning a method of telling the whole world how good British Columbia lumber is; how to get it; how to use it, and what it costs. They are studying the markets of Australia and the Orient as they never studied them before. They are shipping to the eastern States and the West Indies by the Panama Canal and expect to work up good permanent markets in those countries. The few good orders that have recently come out, have opened some of the large mills and the whole trade, which a few days ago was in dejection, is already counting many an unhatched chicken. We can only hope that the results will be up to expectations. In the meanwhile, however, it is like a breeze from the pines to a tired city dweller, to read once more the cheering news that the west feels its confidence returning.

---

# Preparing to Push Wood Products

At the mass-meeting of the Forest Products Federation which is to be held in Chicago on February 24th and 25th, information will be presented by special committees and by officers of the Association upon the conditions which tend to reduce the use of lumber, or to encourage the use of other building materials. To every man who is engaged in the manufacture or sale of lumber this information will be of much value, and the efforts which will be made to increase the use of lumber, after this information has been received and discussed, will, it is hoped, bring about a much better trade condition than has ever existed in the past.

It is remarkable how quickly the public takes up a statement of a sensational nature regarding an impending scarcity of any important raw material, and how difficult it is to displace such an idea once it has secured a good hold upon the public mind. In connection with lumber this has been demonstrated very forcibly. The "impending wood famine" is now a time-honored subject of discussion in the press in spite of all that has been done to give the public a more accurate idea of the situation. The popular opinion is that timber has already become scarce enough to warrant the extensive use of substitute materials. This opinion has been sedulously fostered by the clever campaign of publicity conducted by those who are interested in substitute materials. In spite of popular opinion, however, there is still plenty of timber available for all necessary requirements, and the campaign for the wider use of lumber and timber has a firm foundation of fact to build upon. Properly conducted, this campaign cannot fail to have good results, both to the lumber industry and to the consuming public.

The question is almost entirely one of teaching the consumer about the source of supply and the proper methods of use in order to get the best results. The object of the proposed campaign is, not to

encourage the use of wood in places for which it is not suited, but to cultivate the field of the proper use of lumber so that the annual consumption will be sufficient to take care of the output. Under modern conditions of trade, manufacturers of every commodity have to follow out a practice of this nature, and lumbermen are no exception to this rule of business. More complete use of lumber will be possible only as wider markets are developed. This is the primary purpose of the Forest Products Federation and for this reason the results secured will unquestionably be important to the industry, both in Canada and in the United States.

The new feature of the present movement is that it includes every branch of the lumber industry. The co-operation of manufacturers, wholesalers and retailers in spreading information about the merits and uses of lumber will do much, not only to educate the public along this line, but also to educate the different branches of the trade and industry regarding the better development of good business relations between one another. So far as the use of different varieties of wood are concerned, the federation will leave all such matters to the various lumber associations which are directly concerned.

In order to systematize the work of the Forest Products Federation, several committees have been appointed which will present reports at the mass-meeting at Chicago. These reports will be upon the following subjects:—Building Codes, Fire Losses, Comparative Prices of Building Materials, Shingles, Promotion. Strong committees have been appointed and the information which they present should furnish an excellent basis upon which to work out the details of the publicity campaign.

In Canada the use of substitute materials has been so successfully exploited as to make the question of just as much importance to the lumbermen of this country as it is to those of the United States.

# Forestry Progress During the Past Year

Sir Clifford Sifton, in his annual address delivered recently before the Commission of Conservation, dealt at considerable length with the forest production of Canada. The fire season of 1914, he said, was the worst since 1910, and the aggregate of loss will be heavy. Had it not been for the fire protective organizations established during the last three years, the loss might have approached the dimensions of a national disaster. Results have shown that these organizations are effective, but need strengthening to provide really adequate protection. In practically all cases, larger appropriations are needed, especially for the protection of young forest growth. This action, wherever practicable under present conditions, is fully justifiable on the basis that fire protection must be regarded not as an expense, but as an investment, necessary in the public interest and one which will pay high dividends in the future.

There is strong reason for the belief that the forest resources of Canada have been much over-estimated, and the necessity for a general stock-taking is obvious, in order to provide the basis for a comprehensive plan for intelligent conservation.

Under the fire regulations of the Board of Railway Commissioners, the railway fire protection work has been continued along the lines of organization and policy established during 1912 and 1913. Steady improvement has taken place, and along hundreds of miles of railway lines, the fire protective organizations of the railway companies have proved the most effective, and in some cases the only organized agencies in those particular sections, for the extinguishing of fires.

During the past year, material additions have been made to the area of Dominion Forest Reserves in Saskatchewan, but there are still large areas of non-agricultural forest lands in all the western provinces which should likewise be included in permanent forest reserves. At the present time the total area of forest reserves and parks in the western provinces is 43,802 square miles. There are also 17,900 square miles temporarily reserved with a view of being later included in permanent forest reserves. This does not include areas which were examined during 1914, the temporary reservation of which has not yet been approved. Action to approve the reservation of these areas should be taken without delay.

The present area of forest reserves and parks in Ontario is 22,574 square miles, or 14,447,360 acres. This area, while large in itself, is not great in comparison with reserves and parks in Quebec; nor is it large in proportion to the total area of non-agricultural lands in Ontario which must always be chiefly valuable for the production of timber. The present annual revenue from woods and forests in Ontario is in the neighborhood of $2,000,000. It is obvious that, if this revenue is to be maintained, new areas must be continually opened up for lumbering, and this in turn necessitates the protection of the non-merchantable areas and the young growth.

A notable occurrence of the past year in eastern Canada was the organization last spring of the Lower Ottawa Forest Protective Association. The territory protected by this Association comprises 7,500,000 acres, on the watershed of the Gatineau, Lievre, Rouge, Coulonge and Nation rivers, in the province of Quebec.

# Editorial Short Lengths for Busy Readers

The Labor Gazette in its review of trade conditions during 1914 states that the index number showing the average price of lumber during each month was as follows:—January, 184.2; February, 184.9; March, 183.7; April, 183.1; May, 184.5; June, 184.2; July, 184.1; August, 183.8; September, 182.8; October, 181.9; November, 179.6; December, 186.7. These averages are a comparison with the average prices during the decade from 1890 to 1899 which is taken as 100.

---

Numerous interesting reports of orders for large quantities of lumber and timber have lately been reported from British Columbia, which are beginning to give the industry the appearance of renewed activity. The Canadian Western Lumber Company, New Westminster, received an order in January for 3,000,000 feet board measure of railway ties for the United Kingdom. Other reports indicate that some 25 million feet of railway tie business has been placed recently on the coast, and that there is more coming. The Cameron Lumber Company announce the receipt of an order for 250,000 feet of fir decking for the United Kingdom. One report states that orders for 5,000,000 feet of lumber have been placed in Vancouver recently by the C. P. R., acting on behalf of the Imperial Government. Frederick Stobart, a representative of the British War Office, who was recently in Ottawa, placed large orders with British Columbia firms for railway ties and bridge timbers.

---

The lumbermen of British Columbia will ask the Provincial Government for $25,000, and the Dominion Government for a similar amount, to assist them in their campaign to make known throughout the world the advantages of British Columbia timber products. It will be pointed out that the government derives a very large revenue from timber, and only a comparatively small portion comes back to the industry. Moreover, when the lumber industry is brisk, times are good in the province. Figures given previously are that 85 per cent. of the price obtained for lumber goes out for labor and supplies, which means wide distribution.

---

Pacific Coast rates on certain shipments to Great Britain will be advanced on June 1st. The rates on lumber from Seattle to London and Liverpool will, it is reported, be advanced from 90s. to 100s.; from Seattle to Glasgow from 95s. to 105s.

---

Experimental shipments of mine props of British Columbia fir are being sent to the collieries of Durham and Yorkshire in Great Britain. The shipments are going by way of the Panama Canal.

# The Reader's Viewpoint on Trade Topics

## A Wagon Manufacturer's Views on Birch—Government Inspection Not Approved by B. C. Reader—The Necessity for Co-operation

### Approves of Birch for Various Wagon Parts

Editor Canada Lumberman:—

In the construction of a wagon wheel we find the black birch of Pennsylvania and the New England States and also the yellow birch of Wisconsin and northern Michigan, the very best woods that can be secured for the hub. It does not have the tendency to check and split open that is so characteristic of oak. We have adopted birch entirely in our work and have found since having done so, our loss on account of the degrading had been reduced to a minimum. We find birch will retain the spoke in the mortise fully as well as any other wood that we have used. For other purposes in the construction of the wagons we have not adopted it for the reason that in such grades as we would require it, it has not been advantageous from the standpoint of cost. There is no question, however, but what in the construction of dump wagon boxes it is fully equal to any other wood that can be secured as it is very firm, slow to rot and durable.

We understand that many of the eastern wagon concerns have used it quite extensively in this connection. We believe it would also be a very good wood to use for the construction of log wagons and some parts of farm wagons for bolsters and sand boards, but the price would be prohibitive in this connection.—U. S. Wagon Manufacturer.

### Sees No Need for Government Inspection Bureau

Editor, Canada Lumberman:— Genoa Bay, B.C.

I have your favor of the 23rd ult, to acknowledge. Regarding government inspection of lumber cargoes in lieu of Pacific Lumber Bureau inspection. It strikes me that until British Columbia annexes the States of Washington and Oregon we are not in a position to dispense with the Pacific Bureau inspection. Our competition comes from the manufacturers of Washington and Oregon, and if we are to meet them on even terms in foreign ports we have to guarantee the same grades and inspection as buyers receive if lumber is shipped from those states.

Without some particulars as to what government inspection would amount to, we are not in a position to make any remarks on that side of the subject, but at present sellers and buyers are well satisfied with the service of the Pacific Inspection Bureau, and personally we have no reasons for desiring a change.—Geo. R. Elliott, Manager, Genoa Bay Lumber Company, Limited.

### No Necessity For Government Inspection

Editor, Canada Lumberman:— Chemainus, B.C.

I do not think the time is opportune to try to adopt government inspection. In my opinion, there is no cause for a change. The Bureau of Inspection certificates are accepted as a standard throughout the world, the same as Hunt's inspection of steel, so we can see no object for trying to force a new inspection on the market.—E. J. Palmer, Victoria Lumber & Manufacturing Company, Limited.

### Confidence Coming Back Surely

Editor Canada Lumberman:— Toronto, Ont.

It is most difficult to predict what is likely to happen during the balance of this year. There are many factors to be taken into consideration but without mentioning them individually, I cannot see any just cause at the present time for pessimism, in fact the general trend of affairs is generally favorable

While the war is likely to last for some time it is very much in favor of the Allies, and will become more so from month to month. The tremendous orders for war material placed with the various manufacturing industries in this country, and high prices for all classes of farm products should be the means of keeping the great majority of our Canadian industries busy. What is needed to restore full confidence is for the loan companies to commence loaning money as usual, which they are likely to do in the near future, and for the banks to advance sufficient money for the lumber industry, and for all Canadians to give the preference to Canadian made goods and for every individual to do his part in keeping business going as usual.

While there is no doubt that there has been a heavy shrinkage in business, it was caused largely through a certain lack of confidence. This confidence is becoming gradually restored from month to month. This should be helped along by all the financial institutions in the country doing their utmost to assist every worthy industry.

At the present time I understand that the lumber industries are suffering to some extent, through sufficient capital not being advanced to them by the banks, although as far as the manufacturers are concerned, other than the lumber industries, I believe the banks are doing their full duty.

Almost all the factories in the United States that were closed during 1914 have now started operations, no doubt with fewer men than formerly, but as the railway problems have been practically all settled with the Government, it is stated that all the factories in the United States will be working full time and with a full compliment of men within two or three months. A prosperous United States will have a good effect on Canada.

To sum up the whole situation the magic wand which could bring everything back to its normal condition is called "Confidence"; let every person wave this wand and act up to it and 1915 should be a good year for all.—W. J. Murtry, President, Gold Medal Furniture Company.

### Volume of Business Holding Up

Editor Canada Lumberman:— St. John, N.B.

While the business in boxes and box shooks during the past year was not as lively as we would have liked, still the volume of business which we have done compared very favorably with that of 1913. We have recently been offered some large export orders in box shooks for England at good prices f.o.b. St. John, but the difficulties in securing steamer space under the present great scarcity of transatlantic tonnage with the consequent abnormally high rates of freight prevailing, are militating against the successful carrying out of this export business.—Wilson Box Company, Limited.

### Co-operation Badly Needed in Lumber Trade

Editor Canada Lumberman:— Penetanguishene, Ont.

We read with a good deal of interest the article in your last issue on the co-operation of lumbermen. We think that the article is a good one and deserving of being repeated many times until they all get the idea dinned into them so that they all work together. The different lumbermen are beginning to realize it, we think, and if they could establish their Lumbermen's Club into a "get together" club it would do a great deal to help the conditions existing to-day.—The C. Beck Manufacturing Company.

### Confidence on Its Way Back

Editor Canada Lumberman:— Montreal, Que.

Despite the optimistic outlook for business in general, at the outset of 1914, the optimism felt by the lumbermen did not, as everyone knows, materialize, even during the months when the early spring rush of lumber to the yards and factories was naturally expected.

The feeling of caution seemed to pervade all the markets several months prior to the declaration of the European war, no doubt reflected by the attitude of the banks throughout the country, whose elasticity in loans, during the most necessary times, was not appreciable.

No doubt the uneasiness felt by these institutions can be traced back to the Balkan wars, which many claim was the indirect result of German influence.

European banking institutions were in a position to appreciate the heavy calls for loans by the various governments, and, no doubt, the feverish war preparations, which were being quietly undertaken, presaged the conflict which is now under way, and paved the way for the extraordinary caution, which we were all forced to accept.

As a consequence, the necessity for prompter payments on the part of buyers, shortened very greatly the amount of outstanding notes and trade paper; reduced very largely the stocks on hand in the yards; produced a condition of overstock at the mills, and with the declaration of war a feeling of demoralization, apparently went through the ranks of manufacturers in general, which was not really justified by reason of overstocks in the yards and at factories.

Nineteen-fifteen. We are all hoping—some optimistically, more otherwise—for an early return to normal business, and if we can only keep our heads, confidence will be restored, and those, fortunate enough to be able to hold their balance of 1913-14 stocks for early spring months, as well as those, whose unbounded, and well placed confidence, in the ability of Canada to hold its own, war or no war, induces them to manufacture their usual output, will realize good sales at top prices. It is the writer's opinion that many lines will be

at a premium, the buyer's market will disappear, and it will be a case of the seller holding his own at his own price, which he will get.

Let us ever be cautious; but over-cautiousness may prove a hidden rock on which our ship of commerce may founder.

J. H. Poulin, Sales Manager,
Canada Lumber Sales Company, Ltd.

# Quebec Forest Revenue Increased

### Receipts Greater Than in Any Previous Year—Forest Service Prevented Serious Damage in Spite of Drought

The annual report of the Minister of Lands and Forests of the Province of Quebec for the year ending June 30th, 1914, has just been published. It shows that the revenues received from woods and forests for the year amounted to $1,588,958.73, which was made up as follows:—Ground rents, $359,287; stumpage dues on limits, $1,183,-021.61; penalties for infringements of regulations, $21,637.31; accrued interest, $15,724.81; bonuses on transfers, $9,288. The aggregate amount received by the Department was $1,777,220.18, the highest figure ever obtained by the revenue of the Department since Confederation. The total receipts from woods and forests, $1,588,958.73, were also the highest on record.

The report of the Chief of the Forestry Service for the year states that the twelve months ending June 30th may be looked upon as one of the best years the Service has had, because its organization had been completed in all parts of the province because the royalties obtained on the cut of timber would be the highest ever paid the Department. It was to be feared, however, that the current year would not be so good because, in the first place, the driving of logs was unsuccessful in some places, and also on account of the great disturbances due to the war in Europe.

Referring to the separate districts of the Forestry Service the report states that in district No. one, comprising the Ottawa River Basin, the total quantity of timber cut on timber limits was about 393,000,000 feet of pine, spruce, etc. This cutting was done by 405 shanties, employing 7,543 men and 2,108 horses. There were also in this district 422 sawmill owners and 87 lumber merchants who bought their logs from private forests, the total under this head being approximately 200,000,000 feet. The district also included 107 woodworking establishments and five pulp and paper mills.

In district No. 2, extending from the County of Montcalm to the County of Charlevoix the quantity of timber cut on the limits was 233,000,000 feet. This cutting was done by 945 shanties with 4,509 men and 1,533 horses. This district contained 371 sawmills, 148 woodworking establishments and 11 pulp and paper mills. The cut on private lands in this district amounted to 122,000,000 feet.

In district No. 3, comprising the Counties of Chicoutimi, Lake St. John and Saguenay, the cut on limits was 152,000,000 feet, which was cut by 768 shanties, employing 3,612 men and 1,431 horses. The cut on private lands in this district was over 65,000,000 feet. The district included 60 woodworking establishments, 216 sawmills and 3 pulp and paper mills.

In district No. 4, comprising the Counties of Sherbrooke, Stanstead, Compton, Frontenac, Wolfe, Arthabaska, Megantic, Beauce, Dorchester, Bellechasse, Montmagny, L'Islet, Kamouraska and Temiscouata, the cut on limits amounted to 105,000,000 feet and was done by 314 shanties, employing 2,841 men and 1,124 horses. On private lands in this district the cut amounted to 334,000,000 feet. The district included 893 sawmills, 328 lumber merchants, 300 woodworking establishments and 82 pulp mills.

In district No. 5, including the counties of Rimouski, Matane, Bonaventure and Gaspe, the cut on timber limits amounted to 140,-000,000 feet and was done by 442 shanties, 2.761 men and 1,137 horses. On private lands in this district the cut amounted to 97,000,000 feet. The district included 279 sawmills, 56 woodworking establishments, 123 lumber merchants and one pulp mill.

The report of the Superintendent of the Forest Protection Service states that weather conditions from July to November, 1913, were normal, but from April to June, inclusive, in 1914, the rainfall was very light and the inside an doutside staffs of the service were severely taxed. The situation up to June was the most difficult to handle since forest protection had been in force in the province. Referring to the railway companies the report states that this was the second year since the orders of the Board of Railway Commissioners of Canada and the Quebec Public Utilities Commission had come into force, and it showed an interesting situation. They could no longer regard the railways as one of the great "timber burners" as they had in the past. Much improvement had taken place in this direction and hearty cooperation and compliance with orders had given most satisfactory results.

Two years ago the Dominion Entomologist had given it as his opinion that the spruce bud-worm would gradually disappear. This opinion seems to have been well founded for little was either seen or heard of it now. The Tussock moth was also seldom reported nowadays.

During the year, 899 fires had been reported. The efficiency of the forest protection system against fire had been proved by the fact that many incipient fires, chiefly due to the exceptionally dry weather, were extinguished soon enough to avoid any disasters.

### Helping Northern Ontario Settlers

The paper makers both in Canada and in the United States decided recently that pulp wood in the rough would not do, according to recent reports. As Mr. J. L. Englehart, Chairman of the Temiskaming and Northern Ontario Railway, said: "They wanted it dressed and now they want it nude." The settlers in Greater Ontario rely on the sale of their pulpwood to carry them through the first few years in the new land, but they have no facilities for removing the bark, so that the sudden change of policy on the part of the paper manufacturers left them in a bad way. To many of them it meant hardly less than starvation. The situation was a critical one and fortunately the T. & N. O. Commission and the Ontario Government recognized that fact. Mr. Englehart and the officials of the road, with the concurrence of Hon. G. Howard Ferguson, Minister of Lands, Forests and Mines, and of the Prime Minister, decided to buy a number of rossing machines at once and to ross the pulpwood for the settlers at cost. Only two machines could be secured immediately. One will be used on the line of the T. & N. O. south of Englehart and the other on the line north of Englehart. Two other machines have been ordered and will be in operation soon, while, if necessary, two more will be secured.

The question of finding a market for the pulpwood came up for consideration, also, and the T. & N. O. Commission, with the co-operation of the Ontario Government, decided to assist the settlers to the extent of paying them $2 a cord for the wood at once and to act as the agents of the settlers when a market is found.

The settlers expected that there would be a big demand for pulpwood this year, especially for news print, but the demand was not as large as was anticipated at the outbreak of war. Many of the settlers had made purchases on credit in the expectation that their pulpwood would be snapped up, but, while the demand is fair, the addition of the requirement of rossing gave the settlers a setback. The local storekeepers also found themselves in a bad way, as they could not secure any more goods from the wholesale companies until they had paid their bills, and, therefore, they had to shut down on extending credit. It was this fact which actuated the T. & N. O. Commission in extending an advance of $2 per cord for the settlers' pulpwood. They will not, however, grant this privilege for more than 100 cords to any one settler.

### Inquiry for Bentwood Hoops

An inquiry has been received by the Department of Trade and Commerce, Ottawa, as to whether Canada can supply the wooden hoops used in the production of bentwood trunks, hat boxes, etc., which have previously been supplied from Germany and Austria. The hoops are usually manufactured from beech. It is stated that about six different sizes in pairs are used and they run from 16 inches to 22 inches in length between bent ends. The hoops are rounded and about 1 inch in diameter. It is said that hundreds of thousands of pairs are used yearly in Great Britain. Attempts to use English beech for this purpose have been unsuccessful because it will not stand the bending process, while that obtained in Germany and Austria will. It is possible that Canadian beech may also be unsuitable for this reason, and elm or some other timber may be found more satisfactory. A trade catalogue of trunks in which hoops are used may be seen at the Department. Today's price per hundred pairs assorted sizes, 17-inch to 20-inch (i.e., 17-inch, 18-inch, 19-inch, 20-inch) between ends is 45s. c.i.f. London. The name of the applicant for these goods may be obtained from the Department.

### Match Splits Wanted in England

The weekly report of the Department of Trade and Commerce under date of February 8, says:—Attention may be drawn to Trade Enquiry No. 228 appearing in Weekly Report No. 575, and having reference to a United Kingdom inquiry for 500,000,000 splits for match making. In order to illustrate the standard length and thickness of the splits used, Mr. J. E. Ray, Birmingham, has forwarded samples to the Department where they can be inspected by interested Canadian firms. (Refer File No. A549.) It is also stated that the material must be aspen. If Canadian firms are in a position to supply these splits, large quantities can be taken annually.

A bill to amend the Quebec Cullers Act has been introduced into the Quebec legislature. Its object is to allow graduates of the forestry school to act as lumber cullers, without examination.

# A Modern Sawmill in the Far North

## Extensive Settlement in Northern Manitoba Leads to Erection of Large Spruce Manufacturing Company at the Pas, by the Finger Lumber Company

The Finger Lumber Co.—View of Sawmill and Loading Shed.

The Finger Lumber Co.—Loading a Barge.

IT is difficult to realize the mighty development which, in the last decades, has taken place in Western Canada, especially in the Middle West, comprising the Prairie Provinces of Manitoba, Saskatchewan and Alberta. It is only a very few years ago that the settlers commenced to flock in and take up land in the most southern parts of these provinces. They have gradually worked themselves northward, and the railroads that commenced to build parallel with the international boundary extending east and west, are more and more invading virgin country to the north.

If you will look at an ordinary map of middle Western Canada you will notice what a vast territory there is north of the Grand Trunk Pacific and Canadian Northern transcontinental lines tributary to the Saskatchewan River, a territory which is still apparently virgin and not surveyed. In describing this country the compiler of the map has been content with such general remarks as "Rich sandy loam," "Quantities of pulp wood," "Good timber," "Merchantable spruce in large quantities," "Hay lands," "Good timber," etc. It is a country where nature's riches are still lying dormant waiting for the settler. Certain parts of this country have been more or less before the public eye during the last few years and a movement of pioneers has set in. We refer to that part through which the Hudson Bay Railroad is being built from The Pas to the Hudson Bay.

### How the Timber Was Located

Among those who renounced the comforts of civilization and took upon himself to find new fields for his energy was Herman Finger, who, fascinated by the charms of the wilderness, set out to assist in developing this virgin country. As early as 1904 Mr. Finger explored the timber reserves of the country tributary to the Saskatchewan River between Prince Albert and The Pas, and the Carrot River Valley. He traveled by canoe in the summer and by dog teams and on snow shoes in the winter. He slept in the open under the spruce tree in the middle of winter, without tent or stove, with the thermometer registering fifty degrees below zero. It required six years for the preliminary work of exploring the timber, and in 1910, having acquired extensive timber limits located on the Carrot and Saskatchewan rivers, Mr. Finger organized The Finger Lumber Company, Limited. A site for the mill and yards was purchased at The Pas, Manitoba, 500 miles north of Winnipeg and 400 miles west of Hudson Bay. Work on the plant started in October, 1910. In 1911 the plant was completed and sawing operations commenced.

### A Complete and Modern Plant

The Finger Lumber Company's plant is one of the most complete and modern sawmills in the middle West. The mill proper is a substantial building constructed of British Columbia fir on cement foundation, the building is 208 feet long and 64 ft. wide. It is equipped with rotary and gang saws.

Only one-half of the mill is equipped at present but the company expects to install the other side just as soon as trade warrants it, thereby doubling the capacity.

The mill is driven by a Corliss engine of 750 h.p., the gang being driven separately by a twin engine of 200 h.p. The five boilers are 72 in. x 18 ft. and have Dutch ovens.

The extensive yards are located immediately behind the mill. They are equipped with tracks and all the lumber is hauled out from the mill on cars. Cars are also used in hauling the lumber to the planing mill. The sawmill has a capacity of 250,000 feet in twenty hours. The capacity of the planing mill is ten cars per day.

The Finger Lumber Company is principally catering to the trade of the Prairie provinces. A good market for lower grades is found in the Chicago-Milwaukee territory.

The company has built comfortable dwellings for its employees and is also operating a boarding house.

The timber limits belonging to the Finger Lumber Company contain a high grade of white spruce with a sprinkling of cottonwood,

The Finger Lumber Company's Steam Barge C. R. Smith.

The Finger Lumber Company, The Pas, Manitoba—Planing Mill and Loading Shed.

The Finger Lumber Company—A Log Jam in the Carrot River.

tamarack and other woods. The camps are located about sixty miles from The Pas on the Carrot River. All supplies are shipped in in the fall by water, so very little toting has to be done during the winter. The logs are driven to the mouth of the Carrot River where they are boomed and towed down the Saskatchewan. The company owns one high power tug and one steam barge one hundred feet long with side paddle wheels, also one pile driver and several barges.

**Mr. Finger a Born Lumberman**

Mr. Herman Finger, the President of the company, received his early training as a lumberman in Wisconsin. Ever since he was a boy he has followed the life of a lumberman. He started at the bottom of the ladder and, advancing rapidly to responsible positions, finally acquired an interest in a logging company. He later became one of the organizers of the Eagle River Lumber Company, of Eagle River, Wisconsin. Disposing of his interests at that point he moved to Port Arthur, Ontario, where he organized the Pigeon River Lumber Company.

Mr. Finger takes an active part in the affairs of the town of The Pas, having served as Mayor since its incorporation in May, 1911.

The other officers of the company are: Vice-President, C. R. Smith, Menasha, Wis.; Secretary-Treasurer, W. H. Miner, Menasha, Wis.

The logging operations of the company are superintended by Mr. O. G. Finger, who accompanied his father during the early travels in locating the timber.

## B. C.'s Lumber Trade Handicaps

That the lumber industry in British Columbia is suffering from a lack of available markets was the statement made by Mr. J. D. McCormack, of the Canadian Western Lumber Company, recently. While there is plenty of lumber in the province and plenty of demand for it in many parts of the world, the difficulty is in effecting a link between the two. With the falling off of the local demand for lumber, due to the fact that the cities in British Columbia had been built ahead of the present time, there was a falling off in the demand from the prairie provinces, which was the only other natural market for British Columbia lumber. The trouble with sending lumber to the Orient, South Africa, Australia and Europe was to get it there at reasonable prices.

Ships could not afford to come to British Columbia for cargoes of lumber unless they had incoming cargoes to haul. The reason why San Francisco firms had secured the lumber market in Australia was because they imported large quantities of Australian products, such as coal, wool, mutton, etc. For the same reason, Australia was not likely to grant a preference to Canadian lumber. It would not care to discriminate against a good customer.

An unfavorable factor in the situation in British Columbia was that lumbering could be carried on cheaper in Washington and Oregon than British Columbia because the trees stood thicker together on the ground and the cost of lumbering was therefore less. The soft woods of the Southern States were a formidable competitor to British Columbia lumber in the Atlantic seaboard because labor was cheaper there and the freight rate less.

Asked where any prospect of future betterment for the industry lay, Mr. McCormack said that after the war, Great Britain would have a surplus of ships and no doubt many of them would come to British Columbia for cargoes of lumber. Then, of course, the development of the prairie provinces would create a steady demand for lumber, but a buying and shipping organization similar to that in San Francisco, which would finance shipments, was necessary in British Columbia, before the industry would be in a position to compete properly.

## Pacific Coast Timber in United Kingdom

Pacific Coast woods will no doubt be used more largely in the future, but it appears that it will be more during the continuance of hostilities that such will be inquired for. As is of course well known, it is impossible to export any wooden goods from the Russian Baltic, and this source of supply will be closed without doubt until peace has been declared. The proclamation of the Russian Government, declaring all wooden goods contraband of war, has curtailed the export from Sweden, and although it is in some cases possible to rail the goods across to Norway, this naturally means an increase in price of, say, approximately $5 per thousand. The result is that as soon as the German proclamation was made, the market for all kinds of wooden goods —except, perhaps, expensive hardwoods—appreciably advanced, and for this reason there are very much better prospects of buyers purchasing Pacific Coast woods for their ordinary requirements, though unfortunately the freight situation at present is such that it stops business generally on account of the high cost, freight and insurance prices. If only the freights were about normal, we would anticipate a big business being done from the Pacific coast. The present high rates of freight naturally react more heavily on the Pacific coast than from, say, Norway, the distance from the latter country being so much shorter. For instance, 50 per cent. rise in freights from Norway would mean merely a matter of $2.50 per thousand, whereas 50 per cent. increase in Pacific freights means a very considerable increase on this figure. Furthermore, there is practically no tonnage offering at the moment, and the essence of present contracts is prompt shipment. In our opinion Pacific Coast woods, especially Oregon pine (Douglas fir), will be used more largely after the cessation of hostilities, for the reason that these woods will in the near future be employed to a large extent to replace Baltic woods for certain purposes, with the result that their use in such cases may remain permanent.—(The Timberman, Portland, Ore.).

## B. C. Pit Timbers Handicapped in Great Britain Trade

Osbeck & Company, Limited, pit timber merchants, Cardiff, Wales, in a recent report to the West Coast Lumberman, discourage the expectation that pit timbers from the Pacific Coast may find a market in Great Britain.

"We cannot see any possibility of making use here of pitwood from the Pacific Coast," they say. "It is true that the war has to a considerable extent interferred with our ordinary sources of supply, but goods are still reaching us from France and Scandinavia in fair quantities, and at prices that would preclude importing from even your Atlantic ports. The long ocean freightage from the Pacific side is prohibitive in the case of a low-valued commodity like pitwood, however cheaply the timber may be obtainable f. o. b., although we know that your shippers can offer some of the finest quality wood in the world.

"For the information of your readers, we may say that the normal import of mining timber into the Cardiff district amounts to one million seven hundred and fifty thousand tons per annum—say sixty million pieces—usual sizes being six and a half and nine foot lengths, in diameters from four to eight inches. The trade is therefore on a somewhat extensive scale, but when it is said that even during the war selling prices have been below twenty shillings per ton ex ships here ($4.80) it will be understood that there is little or no prospect of Pacific wood finding a place in this market."

## The British Columbia Log Market

No improvement is shown in the British Columbia log market over that of a month ago. The Canadian Western Lumber Company resumed operations on the 18th of January, having got an order for three million feet from a British customer, but it has several million feet of logs on hand and will not need to start its big camps near Courtenay for some time. This mill expects that with the little improvement showing up it will be able to continue cutting, and doubtless when this is assured logging will again be started. It is seldom a buyer in the open market. The Cameron Lumber Company, Victoria, which has also been getting some business, took about three million feet of logs from the International Timber Company, of Vancouver, since it is better to buy these days than to cut. The International gets its timber from the Campbell River district, and has large booms on hand. Prices of fir logs are quoted at from $6 to $7.50.

In December the logs scaled amounted to 40,000,000 feet in the coast district, as compared with 29,000,000 feet in November. This increase, suggested a logger, is the result of re-scaling for export and also double scaling, the figures not being kept separate. For instance, if an objection is raised to a scale and the boom is scaled over by another logger, the second scale is counted along with the first, as the loggers each turn in their respective figures which are totalled. The same applies to logs re-scaled for export. That would make it appear that official figures do not give an exact idea of operations of the camps. In December, it is known that fewer camps were operating than at any time since a year ago, yet the returns were comparatively large. Logs scaled in the coast district for the twelve months past were: January, 21,209,017 feet; February, 26,410,998 feet; March, 32,276,051 feet; April, 36,344,866 feet; May, 59,785,729 feet; June, 60,158,666 feet; July, 74,549,445 feet; August, 61,926,046 feet; September, 66,510,906 feet; October, 47,037,352 feet; November, 29,161,124 feet; December, 40,000,000 feet.

The United States Forest Service is offering for sale 382,000,000 feet of timber on the Crater and Paulina forests in the State of Oregon. This is the largest body of timber ever placed on the market in Oregon by the Forest Service. Of it, 10,000,000 feet is western yellow pine of good quality, the rest being sugar, lodgepole, and western white pine. It is estimated that the investment of $340,000 will be necessary for the operation. The minimum price for which bids will be accepted is $3 a thousand feet for the yellow and other pines, on the smaller section, which contains 7,120 acres, and $3.25 on the larger section, in addition to 50c. per thousand for the less important species. Sealed bids are being recieved by the district forester at Portland, Oregon, until April 10th.

# Prominent Lumberman Passes Away

## Death of R. H. Alexander—A Pioneer Lumberman and Prominent Factor in Development

R. H. Alexander, of Vancouver, B.C., one of the best known lumbermen of British Columbia, who has been extensively interested in the lumber industry of the Pacific Northwest for nearly half a century, died suddenly of cerebral hemorage at the home of his son, Fred. W. Alexander, in Seattle, Wash., on January 29th. Mr. Alexander had been at Tacoma the day previous attending a meeting of lumbermen.

For many years the late Mr. Alexander had been manager and secretary of the British Columbia Mills, Timber & Trading Company, and one of the most prominent lumber manufacturers in British Columbia, but retired a few months ago, though still remaining upon the board of directors. Mr. Alexander's death leaves a great gap among the ranks of Vancouver's early pioneers. No one man among the old pioneers was so universally respected and beloved for his many good qualities as Mr. Alexander, who was really the dean of Vancouver's early settlers and who, old timers will recall, came within just one vote of being elected as the first mayor of Vancouver.

The late Mr. Alexander took a prominent part in the history of the city and was one of its most active citizens during the period of reconstruction following the great fire which destroyed the city on June 13th, 1886. Hundreds of burnt out residents of the fire found shelter and refuge under the quarters of the Hastings mill, as the property is still sometimes known. Thanks to the energy of Mr. Alexander and his staff, the Hastings Mills delivery wagons, on the evening of the fire, commenced hauling lumber for construction of temporary shelters on sites of what are now many of the down-town skyscrapers of Vancouver. In after years Mr. Alexander served the city successfully as an alderman. He was a charter member of the Vancouver Board of Trade. If he had lived for another month he would have completed 28 years continuous membership of the Board. When the Board celebrated its 25th anniversary Mr. Alexander was one of the three surviving members who stood up when a call was made for charter members, the other two being Mr. F. L. Carter-Cotton and Mr. Wm. Skene.

In his younger years the late Mr. Alexander took a prominent interest in all sporting events. Even in his later years he was widely known as a keen yachtsman. During the last twenty-five years he had been the owner of many well-known sailing yachts. He was a member of the first Vancouver Yacht Club, organized nearly twenty years ago, and took a prominent part in the organization of the present Royal Vancouver Yacht Club about ten years ago. He was elected commodore in 1906 and 1907.

Mr. Alexander had gone to Seattle from his home in Vancouver, B.C., to attend a meeting of the Pacific Lumber Inspection Bureau, of which, years ago, he was one of the founders. He attended this meeting the day before his death and seemed in his customary good health. He spent the night at the home of his son, and was preparing for breakfast when stricken with cerebral hemorrhage, passing away shortly afterwards.

Mr. Alexander was born in Edinburgh, Scotland, May 17th, 1844. He came to Canada shortly after completing a course in Edinburgh Academy. The spirit and ruggedness of a pioneer were his, and, in 1862, long before the days of transcontinental railways, he made the trip out to British Columbia, reaching the Coast by way of the Tete Jaune Cache and the Fraser River. After a few years at mining and packing, he, in 1870, became assistant to Capt. James Raymur, who at that time was operating the second sawmill ever built in British Columbia—the British Columbia, Spar, Lumber & Saw Mill Company, Limited, located on Burrard Inlet. Mr. Alexander succeeded Capt. Raymur in 1882.

When in 1886 the Canadian Pacific extended its road from Port Moody to Granville (now Vancouver) and the lumber industry of the province really began to develop, in that development Mr. Alexander was ever a prominent factor. In 1891 the Hastings Mill Company, with which he was identified, bought out the Royal City Planing Mills Company, of New Westminster, and the British Columbia Mills, Timber & Trading Company was formed by John Hendry, Mr. Alexander, David McNair and C. M. Beecher, a nephew of the famous Henry Ward Beecher. Mr. Hastings was made secretary of the company, which assumed control of the Hastings Mills, and Royal City Planing Mills, with plants at New Westminster, Vancouver and Moodyville. It was in twenty-four years of active participation in this company's world-wide lumber trade that Mr. Alexander became a conspicuous force in Pacific Coast lumbering.

Notwithstanding the requirements of his active business career, he found much time to devote to civic affairs of the province and of his home city. In 1865 he served with the famous Victoria Rifles. For a number of years he was a member of the board of health of Vancouver, secretary of the school board and chairman of the pilotage board.

Four children survive—R. H. H. Alexander, the well-known Vancouver lumberman; Fred. W. Alexander, secretary of the Pacific Lumber Inspection Bureau, Seattle; H. O. Alexander, of Vancouver; and Mrs. J. L. G. Abbott, also of Vancouver.

---

### Death of Geo. McKean, of St. John, N.B.

Mr. Geo. McKean, the well-known lumber dealer of St. John, N.B., died at his residence on February 1st, at the age of 74, after an illness of about two weeks. Previous to his illness Mr. McKean had been actively engaged in his business.

The late Geo. McKean was born in Armagh, Ireland, in 1841. In 1867 he was sent out to St. John as the representative of Francis Carvill & Son, and he continued in that capacity until 1872, when he was admitted into partnership and the name of the firm was changed to Carvill, McKean & Company. This firm quickly became one of the leading lumber companies in the province. It was dissolved in 1883. The late Mr. McKean then engaged in business on his own account. About 1895 he became connected with Price, Pearce, Limited, and continued in active association with it until the time of his death. This firm did a large business, trading throughout the provinces of New Brunswick, Nova Scotia and Quebec. The firm's connection extended to South America, Great Britain, the United States, South Africa, and Australia.

---

### Labor Gazette Review of Lumbering Operations

The Canadian Labor Gazette, in its issue for January, contains the following reference to lumbering operations during the month of December, 1914:—Lumbering operations were fairly active during December, particularly in New Brunswick, where a plentiful fall of snow facilitated work both in the woods and in the yards. Crews as large as in former years were employed and the cut was expected to equal that of last year. In Nova Scotia also, operations in the woods were being carried on extensively and were expected to increase in activity with the arrival of more snow. In Quebec districts lumbering operations were fairly active, with plenty of snow in some localities. Logging operations in the Ottawa district were also helped by good falls of snow. The wages being paid by J. R. Booth, who had some seventeen camps in the woods with about eighty men in each camp, ranged from $18 to $26 a month. Low water in the Ottawa River continued to cause inconvenience to the pulp and paper mills in the city. Conditions in this respect, however, were improved from the previous month, and a number of employees of pulp and paper mills who had been idle owing to low water resumed work. In the Peterborough district lumbering operations were quiet, and except for pulpwood very little timber was being cut. From Cobalt it was reported that the larger camps expected to do little in most sections beyond the taking out of pulp-wood.

### Six inch Spruce Cargoes

The Timber Trades Journal, London, Eng., in a recent issue says: In times like the present some disruption of standards of relative value must necessarily occur, as witness the enormous rise which, owing to the exceptional demand, has taken place in 2 in. x 4 in. compared with other sizes. The appreciation which has taken place since the war in all scantling dimensions has emboldened shippers of Lower Port spruce to take 6 in. widths out of the category of scantlings, and to ask full price for them with the sevens and up. When regard is had to the large percentage of 6 in. scantlings usually shipped, the loss of the pound per standard reduction on these deprives importers of the "plum" which a good line of 6 in. in a cargo was regarded as constituting. Buying 6 in. and up at an all round price, obviously there must be an adjustment inter se of the relative values of the different sizes when sold separately, especially as the percentage of the wider, and therefore more valuable, widths seems to be growing beautifully less by degrees. In ordinary times an attempt to effect a change of this kind would probably have produced some outcry, but today buyers are probably only too glad to get prompt cargoes without haggling unduly over the few hundred pounds extra cost on the cargo which the loss of the usual allowance on this width in scantling entails. If our memory serves us aright, some few years ago an effort was made to reduce the allowance on 6 in. to 10s., but the attempt failed, and it now remains to be seen whether the present effort to cut the allowance off altogether will be more successful. In the circumstances at present prevailing, 6 in. x 3 in. and 6 in. x 2 in. are very useful and saleable sizes, but when the stress of the present demand is over, and shipping facilities more nearly approach the normal, different considerations will have to be reckoned with.

---

News print paper has been made by the Forest Service of the United States laboratory from 24 different woods, and a number compare favorably with standard spruce pulp paper.

# Reduction in B. C. Production in 1914

## Nearly Half a Million Feet Less Than in 1913—Shipments Decreased About Half a Million Feet But Almost Balanced Output

The annual general meeting of the Mountain Lumber Manufacturers' Association was held recently at Nelson, B.C., the following members being present:—O. Rodgers, Canyon City Lumber Co.; F. W. Adolph, Adolph Lumber Co.; H. N. Sereth, Riverside Lumber Co.; C. M. Cooke, Columbia River Lumber Co.; J. S. Deschamps, Rossland; C. M. Pennock, Crows Nest Pass Lumber Co.; W. Mark DeCew, Western Pine Lumber Co.; C. D. McNab, Baker Lumber Co.; H. H. Ross, Ross-Saskatoon Lumber Co.; C. B. Staples, Otis Staples Lumber Co.; A. E. Watts, Wattsburg Lumber Co.; W. C. E. Koch, Koch's Siding; W. A. Anstie, Forest Mills of B.C.; W. F. Lammers, Adams River Lumber Co.; Neale Murray, Arrow Lakes Lumber Co.; G. F. Robinson, Western Canada Timber Co. and Summit Lake Lumber Co.; Wm. Waldie, Edgewood Lumber Co.; A. G. Lambert, A. G. Lambert & Co.; T. S. Richardson, British Canadian Lumber Corporation.

Mr. Chas. O. Rodgers, the president, occupied the chair and delivered an interesting address on the conditions of the lumber industry during the past year. He was most optimistic of the future.

The secretary reviewed the work of the association for the past year and gave approximate figures of production and shipments of lumber of the western Canadian mills for the year 1914 compared with the year 1913, as follows:—

| | Feet |
|---|---|
| Cut, 1913 | 1,516,000,000 |
| Cut, 1914 | 1,080,000,000 |
| Shipments, 1913, | 1,530,000,000 |
| Shipments, 1914 | 1,035,000,000 |
| Stock at December 31, 1914 | 663,000,000 |
| American importation in four western provinces | |
| 1914 | 78,000,000 |
| 1913 | 140,000,000 |

The figures for the mountain mills alone show a reduction in the cut of 1914 in comparison with that of 1913 of 150 million feet, while there was a falling off in sales of 125 million feet.

Officers for the year 1915 were elected as follows: C. D. McNab, Waldo, B.C., President; Chas. O. Rodgers, Creston, B.C., Vice-President; I. R. Poole, of Nelson, B.C., Secretary-Treasurer; W. A. Anstie, Revelstoke, B.C., W. F. Lammers, Chase, B.C., A. K. Leitch, Jaffray, B.C., and W. Mark DeCew, Grand Forks, B.C., Executive Committee.

### Want Better Parliamentary Support

The question of securing adequate representation in the Legislative Houses was discussed at some length, and the following was given out for publication:—

"After due consideration, the Mountain Lumber Manufacturers' Association has deemed it advisable, for the welfare of the lumber industry, to send to Parliament representatives who have a knowledge of the adverse conditions under which the lumber industry has been laboring during the past few years. The association is not taking this course with a view to entering the political arena, but feels that the lumber industry, the largest and most important in the province, and consequently supplying a large proportion of the population in the interior of British Columbia with a living, is not getting the consideration due it.

"Government statistics show that the revenue from the forestry branch is equal to $6.63 per capita of the population and the total Government revenue from the forests of British Columbia during the past nine years has been sufficient to pay for all the roads, bridges and wharves constructed and has been the most important factor in the commercial and industrial development of the province. The annual cut of British Columbia timber is approximately two billion feet. There are 420 sawmills and 790 logging camps in the province employing 60,000 men. The timber industry represents one-half the industrial capital, one-half of the payroll and 37 per cent. of the annual production of wealth in British Columbia.

British Columbia in 1913 made the following expenditures in the lumber industry:—

| | |
|---|---|
| In wages alone | $11,025,000 |
| Food supplies of operatives only | 3,353,000 |
| Mill and logging supplies | 1,575,000 |
| Employment, tow boats | 800,000 |
| Total | 16,753,000 |

"In order that this portion of the province may get proper representation, the lumbermen have decided that they will support only men with a knowledge of conditions who will pledge themselves to do all in their power to place this industry on a sound basis."

A resolution of condolence to the family of the late D. R. Wilkie, formerly President of the Imperial Bank of Canada, and of congratulation to Mr. P. Howland in his succession to Mr. Wilkie in the Presidency of the institution was passed as follows: "That the Mountain Lumber Manufacturers' Association of British Columbia congratulates Mr. P. Howland on his succession to the presidency of the Imperial Bank of Canada.

"It is further resolved that we take this opportunity of expressing our regret at the great loss sustained not only by bankers but by the commercial and social community of Canada, by the death of the late D. R. Wilkie. The lumber interests have especially lost a courageous friend who was not afraid to criticize frankly those who were mainly responsible for the deplorable state of the lumber trade in the west during recent years, and whose valiant attempt to assist by speaking and writing were highly appreciated by all.

"It is the unanimous wish of all the members of this association that our respectful sympathy be conveyed to the members of the family of the late D. R. Wilkie and not only sympathy but admiration for his sons who have so gallantly taken up arms in defence of the honor of our Empire."

Included in the secretary's report was a review of the work of the Accident Insurance Department. This department is conducted by the association and provides accident insurance at the low rate of ¾ of 1 per cent. Since the inception of this department, some seven years ago, over $126,000 has been paid out in claims. During 1914 the sum of $16,000 was paid out in claims, compared with $23,000 for 1913, and 97 accidents were reported compared with 127 for 1913. The department is conducted by the association for the benefit of its members only, on the mutual plan.

A general discussion took place on the question of asking the Government to grant an extension of time for the removal of timber licenses owing to the exceptional financial conditions existing at the present time, and the following resolution was passed: "That the Government be petitioned to grant an extension of time for the removal of timber licenses until at least six months after the close of the war, and that a committee of three be appointed to interview the Government on the matter."

There was also a general discussion on the present conditions of the lumber industry and prospects for the future. Practically no logging is being carried on this winter, and few mills will start sawing this spring unless there is an improved demand over the present. The general opinion was that no great improvement could be expected for some four or five months, or until good crops were assured.

---

### Western Lumber Finding Sale in the U.S.

Shipments of lumber are now benig sent more regularly than previously from western Canada to United States points. This is a reversal of the condition of affairs which existed a short time ago, when lumber from many parts of the United States was freely shipped into western Canada. Manitoba and Saskatchewan spruce is reported to be freely sold to-day in the United States. Shipments of certain classes are being sent even as far as New York. This material is chiefly used for making boxes. This business has become so important that the sales manager of a Winnipeg lumber company has been transferred to Minneapolis, and his headquarters are now at the latter city. Leading lumber dealers in Winnipeg believe that the lumber business in the rural parts of Manitoba, Saskatchewan and Alberta will be fairly good this year, but it is generally conceded that trade in Winnipeg and other cities will be rather slow. At the same time, lumber merchants in Winnipeg think that business revival will reach that city sooner than the cities farther west. The financial situation gives but little promise of any noticeable betterment while the war lasts, and money for investment in city buildings will be scarce. On the other hand, farmers' buildings are not of a speculative nature, and many of them received such good prices for farm produce this season that they will likely be in fairly good position to erect whatever buildings they may require.

---

Imports of wood and timber into Great Britain during the past three years were valued as follows:—1914, £25,337,251; 1913, £33,788,884; 1912, £28,357,158. The decrease in value as compared with 1913, therefore, was £8,451,633, and as compared with 1912, £3,019,907.

---

Dominion Government dock works in Vancouver and Victoria will take several million feet of timber.

# Suggest Compensation Act Changes

## Lumbermen Want Delinquent Manufacturers More Heavily Penalized for Failure to Pay Assessments

A number of prominent Ontario lumber manufacturers had an interview on February 3rd with Hon. W. H. Hearst and the members of the Ontario Compensation Workmen's Commission, the object being to discuss several points in connection with the Compensation Act. The lumbermen made it clear that the criticisms which they had to offer were directed toward simplifying and improving the Act, and that they were not lacking in sympathy with the compensation system.

One of the chief questions taken up for discussion was the liability of the employer who has not contributed to the compensation fund. At present all injured workmen are given compensation out of the central fund, whether the employer pays his assessment or not. The deputation stated that they had no idea of infringing upon the rights of the worker, but they thought that steps should be taken to penalize those employers who failed to pay their assessment, when they were traced by means of an accident. Their suggestion was that such employers should be made to pay the full amount of compensation given to the employee. They pointed out that a small employer in the lumber industry, who knew that in case of an accident the worst he need fear would be compulsion to pay back assessments, together with a percentage added for delay, would be likely to avoid paying so long as he could escape notice.

Another important point under discussion was the working of the Act in such districts as the Ottawa Valley where the boundary line between two provinces is located. According to the Act in its present form, a man who is employed in another province, but whose residence is in Ontario, has the option of applying for compensation in Ontario or in the province where he is injured. It is considered that this will be unfair to Ontario employers because of the comparative ease with which it will be possible to get compensation in this province. This, it is believed, will result in claims being made not only from workers in Ontario whose dependents live in Quebec, but from men employed in Quebec who are living in Ontario. The lumber manufacturers are likely to have to pay compensation in both ways.

The deputation made no objection to the scale of rates which has been drawn up for the lumbering industry.

Among those who were present were the following:—H. I. Thomas, of J. R. Booth, Ottawa; Daniel McLachlin, of McLachlin Bros., Arnprior; J. S. Gillies, of Gillies Bros., Braeside; T. Clendenen, of W. C. Edwards & Company, Limited, Rockland; W. J. Bell, of the Spanish River Lumber Company, Sudbury; W. E. Bigwood, of Graves, Bigwood & Company, Byng Inlet; G. A. Gray, of the Spanish River Pulp & Paper Company, Espanola, Ont.; A. E. Craig, of the Northern Timber Company, Penetanguishene, and Frank Hawkins, Secretary of the Canadian Lumbermen's Association, Ottawa.

---

### Criticizes Compensation Schedule

In regard to the application of the Workmen's Compensation Act of Ontario to the lumbering and woodworking industries, we have recently received several letters complaining of inequalities in rates charged to different classes of industries, the claim being made that, in several instances the charges are unreasonably high. A letter which we received from one of the largest lumber manufacturing companies in Ontario asks whether lumbermen intend to make any protest againts the arrangement of the rates. So far as the Canada Lumberman is aware no suggestion of this nature has yet been made. We presume that it would have to come either from the Canadian Lumbermen's Association, or from some other general body of lumbermen who might hold a meeting for the purpose of adopting such a course. The writer of the letter referred to above says that, according to his information, the basis of rates has not been consistently worked out. For instance some factories are charged $1.20, which is probably two or three times too high. The rate of $1.80, which is charged for all sawmills, shingle or lath mills is in his opinion, absurb and simply amounts to commandeering from the lumbermen an immediate large contribution, which is especially inopportune during war time and is not warranted by the results of the past so far as the number and nature of accidents in these companies is concerned.

The writer of this letter states that he has been operating logging camps and mills for over forty years and that, up to the date of making returns last fall for the new act, the only accidents that had occurred in connection with sawmilling operations with which he was connected included one fatal accident (absolutely unnecessary and entirely the fault of the victim) one accident resulting in a man having his toes cut off, another resulting in a man losing two fingers and several others resulting in the loss of tips of fingers. These may be less, he says, than the average, but at present rates for sawmill operations, the charges against such accidents would amount to over $60,000, probably $70,000.

It looks, the writer adds, as if the Workmen's Compensation Act will eventually militate against men with large families, render men less careful, and possibly, in a very small percentage of cases, even provoke accidents, for the sake of the monetary advantage.

In conclusion the writer says he cannot see how it can be considered equitable to class operators of mill machines, where danger lurks, at the same rate as the men who handle lumber and slabs in parts of mills where there is no danger. The men who are employed on a sorting platform, the lumber pilers, shippers, handlers of slabs and lumber and those engaged in delivering, are no more liable to accident than men who are engaged in farm work.

In connection with the above criticism of the schedules of the Act, we publish below a list of rates charged against lumber and woodworking operations. The rates given in each class are the percentage of the total wage scale which is payable. For instance under the first section, lumber, etc., $2 is the rate for each $100 for the annual wage scale.

| | |
|---|---|
| Class I.—Lumbering, Logging, River Driving, Rafting, and Booming | $2.00 |
| Class I.—Operation of saw mills, shingle mills or lath mills | 1.80 |
| Class I.—Manufacture of veneer or excelsior | 1.60 |
| Class I.—Staves, spokes or headings | 1.80 |
| Class I.—Operation of Lumber yards (including the delivery of lumber) carried on in connection with sawmills | 1.80 |
| Class I.—Creosoting of timbers | 1.80 |
| Class III.—Manufacture of furniture—Interior woodwork, cabinet work, fixtures or picture frames. | .80 |
| Class III.—Coffins (wood) | .80 |
| Class III.—Wicker and rattanware | .50 |
| Class IV.—Operation of—Planing mills or sash and door factories | 1.50 |
| Class IV.—Operation of lumber yards (including delivery) in connection with planing mills or sash and door factories | 1.50 |
| Class IV.—Manufacture of—Boxes, Corrugated paper and wooden | 1.50 |
| Class IV.—Cheese Boxes | 1.50 |
| Class IV.—Mouldings | 1.50 |
| Class IV.—Screens (window and door) | 1.20 |
| Class IV.—Window shades | 1.20 |
| Class IV.—Shade rollers | 1.20 |
| Class IV.—Wooden articles or wares and baskets | 1.20 |
| Class IV.—Matches or wooden toys | 1.20 |
| Class IV.—Cooperage—not including staves and headings | 1.20 |

---

### Activity General in the Maine Woods

A report from Bangor, Maine, says that after nearly snowless winter up to the last of January, several heavy storms within a few days covered the ground in Northern Maine to depths varying from eight to sixteen inches, and the lumbermen, who had become greatly alarmed over the delay in their operations, are much encouraged. Hundreds of men who had been discharged from logging camps have been recalled, and their prospect is good for steady employment to the end of the season.

Not only loggers, but many farmers and small operators who cut short lumber of various kinds had been worried by lack of snow, as such heavy forest products as railroad ties, last blocks, poles, cedar posts, etc., cannot profitably be moved to railroad or river points over bare ground, and enormous quantities of such lumber that ordinarily would have reached the railroads weeks ago, are yet deep in the woods awaiting transportation. Now that the snow roads are good business is expected to show a tremendous improvement in northern and eastern Maine.

The cut in the Maine timberlands will be unusually light this winter. All the big operators are confident that prices will reach a new high level by midsummer. Across the boundary in the Maritime Provinces there is such a pressure of orders for lumber from British possessions, that very little of the Canadian output of spruce will come into the American market. Then too, owners of northern New England timberlands are becoming more and more independent in their attitude toward the operators. They are steadily increasing their stumpage rates on the theory that within a score of years practically all the virgin spruce in this district will be consumed, and builders will have to depend on southern and western lumber producers for dimension timber for house frames. Some of the best authorities in the Maine lumber trade are predicting $30 spruce within two years.

The demand for pulpwood was never so brisk as it is now. Enormous quantities of second growth and small sized spruce are being purchased by the pulpwood operators.

## Major R. S. Wilson in the Third Contingent

Major R. S. Wilson, Toronto

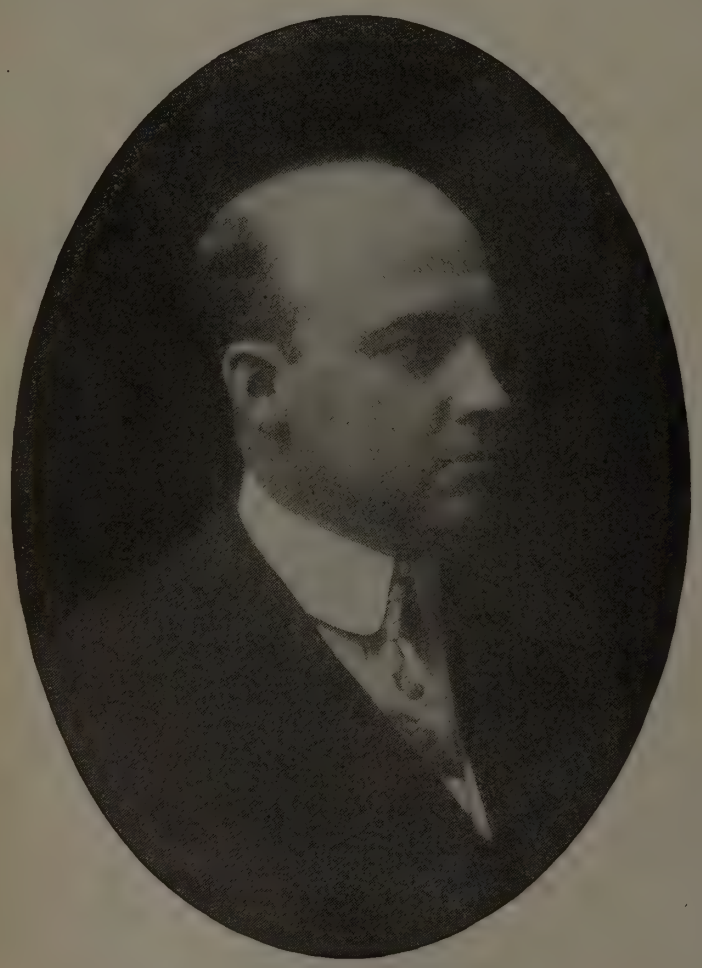
Major R. S. Wilson, of the Wilson Lumber Company, the well-known hardwood manufacturers and wholesalers, of Toronto, will go with the Third Contingent from Canada to the seat of the European war. Major Wilson holds his military rank in the 48th Highlanders and has been devoting a great part of his time recently to the work in connection with the Third Contingent.

Major Wilson has been connected with the Wilson Lumber Company since it commenced business about twenty years ago, and is also president of the Vicksburg Export Company, Vicksburg, Miss., an organization which is affiliated with the Wilson Lumber Company for the purpose of handling its export business. He is also president of the Mississippi Hardwood Company, of Jackson, Miss., whose operations were recently described in the Canada Lumberman. Major Wilson has made the hardwood business his life study and is counted among the most expert members of the hardwood trade in Canada. He formerly spent much of his time in the south looking after the various manufacturing interests of the company.

It is expected that Mr. A. J. Morris, vice-president and general manager of the Mississippi Hardwood Company, and also assistant manager of the Wilson Lumber Company, will look after Major Wilson's work during his absence and will spend his time equally between Toronto and Jackson, Miss. The sawmill of the Mississippi Hardwood Company, which was closed down shortly after Christmas, resumed operations early this month.

## Col. A. D. McRae Serving the Empire

A Vancouver despatch reports that Colonel A. D. McRae has resigned as vice-president and general manager of the Canadian Western Lumber Company, and has entered the army service of Great Britain in the quartermaster general's department, and just now is buying horses in Canada. Colonel McRae, who enjoys an honorary title from the Sixth Regiment, Vancouver, makes his home in Vancouver, having numerous other interests. He will be succeeded as general manager of the Canadian Western by J. D. McCormack, who has been secretary and treasurer of the company. Mr. McCormack is also prominently connected with the McCormack-Dailey Lumber Company, a wholesale lumber concern with headquarters in Seattle, which was organized a few months ago.



Col. A. D. McRae, Vancouver, B. C.

## Personal Paragraphs About Lumbermen

Duncan McLaren, of the Union Lumber Company, Toronto, is spending a month in Florida and other southern points.

John Buchanan, General Manager of the Mexican Mahogany Company, which is controlled by Montreal interests, has arrived in Montreal from Mexico.

George R. Potter, until recently prairie representative of the Adams River Lumber Company, which has its mills at Chase, is now in charge of Chandler & Ditwig's Vancouver office.

Wm. Bryant, formerly with Benson & Bray Company, Limited, Midland, Ont., has been appointed superintendent of the woodworking plant of Schultz Bros. & Company, Limited, Brantford, Ont.

Mr. P. D. Gordon, of Mason, Gordon and Company, has been re-elected a member of the Council of the Montreal Board of Trade. He was one of the old members who secured re-election after a strenuous contest.

J. O. Mason has been given charge of the production department in news, ground wood and sulphite of the Laurentide Company at Grand Mere, Que., in whose service he has been for a number of years.

C. H. Ditewig, of the firm of Chandler & Ditewig, wholesalers in lumber, of Vancouver and Winnipeg, has severed his connection with the firm, and has gone to the Superior Lumber Company, Seattle, to engage in the lumber business.

Mr. E. W. Hamber, vice chairman and general manager of British Columbia Mills Timber & Trading Company, Limited, Vancouver, B.C., was a visitor in Toronto recently to attend the annual meeting of the Dominion Bank of which he is a director.

The firm of Terry & Gordon, wholesale lumber dealers, Confederation Life Building, Toronto, have added a new traveller to their staff in the person of Mr. E. T. Sharpe, who in future will be associated with Mr. F. A. Kirkpatrick in representing this company upon the road.

A recent visitor to Vancouver was Niel Nielsen, trade commissioner of New South Wales, Australia, and a representative to the Panama Exposition. He conferred with the council of the board of trade and its lumber committee relative to trade with Australia, in which market British Columbia millmen are seeking a preference.

Mr. F. N. Waldie, of the Victoria Harbor Lumber Company, Toronto, was married on Saturday, February 6th, to Margaret Blaikie, youngest daughter of the late John L. Blaikie, of Toronto. Mr. and Mrs. Waldie have left for a trip to Washington and other United States points and will return to Toronto about the first of March.

## Pit Prop Prices Steadier in England

The Weekly Report of the Department of Trade and Commerce, in a recent issue, quote Messrs. C. Leary and Company, London, Eng., in regard to the report of the commission which recently visited Canada and Newfoundland to enquire into sources of pit prop supplies, as follows:—"A commission was sent out to Newfoundland and Nova Scotia to make full inquiry, and its report is now known. The outcome thereof is that in normal times those countries cannot hope to compete with the north of Europe, owing to scarcity of labor, and above all, to want of outward cargoes and consequent necessary high freights, as these shipments would have to pay for the entire outward and homeward voyages. However, a new feature came into play, viz., the greatly lessened demand, due to short time being worked at the pits. This fact, together with large supply of native stuff secured by many consumers, has steadied prices. With respect to the future, the duration of the war is a matter of the utmost uncertainty, as also the trading conditions so long as it lasts. Prices cannot resume their normal level under such conditions, nor for years after the war is over."

During the year 1914 Canada's trade in forest products amounted in value to $41,871,383, as compared with $42,532,673 during 1913 and $43,586,853 during 1912.

# Hardwood Men See Prosperity Ahead

## Hardwood Manufacturers' President Discusses the Situation and Outlines Conditions which Promise Improvement

The annual meeting of the Hardwood Manufacturers' Association of the United States was held at Cincinnati, on January 28th, and was in every respect a remarkable success.

One of the most interesting addresses delivered at the meeting was that of the president, Mr. J. H. Himmelberger, of Cape Girardeau, Mo., in the course of which he spoke in part as follows:—

Most men find it unpleasant to linger with thoughts such as a contemplation of the events of the year 1914 brings before them, and I shall, therefore, dwell upon them but briefly. Nineteen-fourteen was ushered in with a feeling of optimism and with the prohpecy of an early return of prosperity, but the handicap inherited from 1913 was not overcome. The first six months, from a business standpoint, were characterized by the same sluggishness that marked the latter part of 1913. There was considerable business transacted, but there was a lack of the snap and vim that indicate real prosperity. Still, we continued hopeful until the shock of the European war the latter part of July shook the foundation of our faith, and temporarily brought us to a standstill.

Since that time our industries have been marking time, and our business men have been trying to solve the problem of the future.

Crops have been good—money, which for a time was tight, is now plentiful, and everything is here for us to do business with.

We cannot afford to sit quietly by awaiting the close of the war; it may not come this year, or next, and if we have been deprived for a while of our business with the countries now at war, we should make an effort to go ahead and do business among ourselves, and with those countries that are not engaged in the conflict. In a word, quoting from one of our famous statesmen "The way to resume is to resume."

Recently your Secretary sent out to a number of our longest headed business men a letter inquiring what they thought of the situation, and in practically every answer received the opinion was expressed that our opportunity for commercial expansion was before us, and that the near future would bring good business. War means not only destruction of human life—first and most deplorable, but the wiping out of existence of millions upon millions of dollars' worth of property; and the breaking down of the commercial systems of the countries involved.

The loss of life cannot be repaid, but the desolated countries must be restored. Some country must furnish the great storehouse from which the needed supplies can be drawn, and logically, our country, with her boundless resources, is the one to do so. Not only will the markets of Europe be open to us, but those of South America, which were formerly supplied by some of the countries now at war.

As much as we deprecate the awfulness of the conflict now raging in Europe, we must not overlook our opportunity. Proper enterprise and legitimate effort at this time to promote our business are not to be looked upon as taking advantage of the misfortune of others. It is our duty. Already we read of immense orders for supplies of all kinds being placed in this country, but as large as they are, they are only a drop in the bucket as compared with what shall be needed later.

### On the Threshold of Unexampled Prosperity

Inasmuch as the steel industry is usually looked upon as a barometer to business conditions, the following quoted from a recent interview with Charles M. Schwab, President of the Bethlehem Steel Corporation will not be amiss at this time. Mr. Schwab says that the United States is now at the threshold of the greatest period of prosperity that it has seen in many years, and admits that on a recent trip to Europe he took contracts for several million dollars' worth of steel product. He further states that the nations of Europe have placed contracts in the United States for more than three hundred million dollars' worth of supplies since the beginning of the war.

"The next big problem the United States will have to face," said Mr. Schwab, "will be the development of transportation facilities in order to handle the tremendous increase in manufacturing and commercial enterprises." The development of our business with foreign countries should be approached with caution. Their conditions must be studied carefully and their credits closely scrutinized.

We, who are here today, are primarily interested in lumber and in what lumbermen are doing.

The policy pursued by hardwood manufacturers since the outbreak of the European war has resulted in a very great reduction in the production. Each man has worked out his own salvation according to his ability and needs. The result has been that in the past five or six months not more than fifty per cent. of the mills in the southern hardwood producing belt have been in operation, and that the production of hardwoods has been reduced to about level with the consumption. There has been no effort on the part of this organization to bring about a curtailment of production.

There is a growing need of a better organized effort on the part of lumbermen to protect their interests against substitutes. This is not a new subject, but is one that should be talked constantly. "lest we forget."

### Organized Effort to Improve Trade

In the 17th of December there met at Chicago lumbermen from all over the country to discuss the necessity of some movement to advance the interests of lumber. The result of this meeting was the formation of an organization, to be known as the Forest Products Federation. The purpose of this organization is to develop an educational campaign that will acquaint the public with the fact that there are numerous places where lumber serves better than anything else; that there is plenty of it to be had and at reasonable prices, etc. Ignorance on this subject is astonishing. The average citizen thinks of our forests as of the past. He does not know that there are somewhere between twenty-five and thirty thousand saw mills in the United States alone, cutting nearly forty billion feet of lumber per year, and that this production can be continued for many years. The substitute fellow with his wily ways and clever advertising has told him differently. About eight billion feet of the production are hardwoods—so it behooves us to put our shoulders to the wheel and push. This new organization was promoted under the auspices of the National Lumber Manufacturers' Association and will be supported by manufacturing organizations, wholesalers, retailers, and in fact everyone who markets lumber and is interested in its welfare. The Forest Products Exposition Company, which is part of the National Lumber Manufacturers' Association, did great work last spring at Chicago and New York for the lumber industry. All of the efforts of the past have accomplished much good, but we must push on and work for the future. We must not, however, be narrow minded enough to claim that lumber is better than anything for everything, nor advocate its use for purposes for which other materials are better adapted, but we must insist with all our might that it has a place, and we as lumbermen must see to it that that place is not usurped. Only organized effort can do this, and if you are called upon to contribute your moral and financial support to any movement having that object in mind, do not hesitate to do so by contributing willingly and liberally. You can best accomplish this by giving your loyal support to your Association.

The Cleveland lumber trade is organizing for the purpose of putting before the public arguments in favor of lumber and its good record of immunity against fire, both in residential and business districts. Of course, what is taking place in Cleveland is taking place in many other sections of the country, and as has already been so ably and frequently pointed out, the lumber trade needs to be as awake and alive as its opponents in other lines of building supplies.

The Forest Products Federation has called a mass meeting to be held in Chicago on February 24th and 25th. It is the plan of the Federation to present at the coming meeting the full status of the situation as regards the propoganda of the substitute manufacturers and fire prevention organizations.

It occurs to me that in the past we lumbermen have wasted too much money and effort fighting each other and trying to convince our customer of the merits of our respective grading rules, systems of inspection, merits of organizations, etc., instead of paying attention to the enemy, who took advantage of his opportunity and got the business that we both lost. Why not all stand together and push wood against substitutes, and not fight among ourselves?

### The Customer Commencing to Insist Upon Grades

We may differ as to the needs of one or more associations, or as to the merits of this or that system of inspection, but I believe we are all agreed that there should be only one set of grading rules, and in this connection we must not overlook the fact that the person who is most insistent upon this point and who is beginning to show signs of wanting to take the reins in his own hands to bring this about is our customer. He is interested primarily in having one set of grading rules and those rules to be permanent and not frequently changed.

In marketing our lumber it behooves us to study his needs—he is just as important a factor as we are, whether at home or abroad, and we must not attempt to cram down his throat something that we think he needs, regardless of what he thinks about it. It doesn't make us strong with him for the future, and all business transactions should be made upon an enduring basis with an eye to the future.

The financial condition at this time does not seem to be giving anyone very much concern. It is generally conceded that the new banking laws will provide for any contingency that may arise, and that it will be ample and broad enough to afford protection to all, and that the shortage of money, and the lack of facilities to handle commercial paper which prevailed last fall will not occur again. The lack of means to handle the cotton crop, and the embarrassment of

business men in all lines in the south is a matter with which you are all familiar, and one with which some of you have had experience.

In facing the future let us make an effort to solve some of the problems that confront every lumber manufacturer, and which we are prone to treat with too much indifference.

Let us ask ourselves whether we pay enough attention to our manufacturing costs. Whether efficiency reigns in every department of our business; whether we pay enough attention to that always vital subject—uniform grades—(and I want to mention here that mixing grades should not be countenanced); and whether we might not improve our methods of merchandising by studying our customers' needs, and remembering always that our interests and the interests of our customers in every transaction are mutual.

These are questions with which all of us have to deal, and upon the manner in which we dispose of them depends very largely on our success.

### Improving Inspection Service

An interesting report was also presented by the Secretary, Mr. W. H. Weller, who stated that in spite of the business depression which had prevailed during 1914 the association had increased its membership. He drew attention particularly to the inspection work of the association. The number of inspections for the year had been reduced by forty per cent. in comparison with 1913, which could be attributed in part to the smaller volume of lumber shipped and in part to the fact that members were shipping more uniform grades than formerly. This was one of the results of the educational work carried on by the association at the mills. Inspection schools had been held at convenient points during the year by the chief inspector. The method of work was as follows:—The chief inspector selected several hundred line boards of the different species of wood and numbered them consecutively. Each inspector went over the entire lot and his grades were recorded. The chief inspector then followed and graded each board. Points of differences were then discussed and threshed out. In this way they had secured excellent results. After the work each employer was shown the record of the inspector and of all those who took part in the work. He could thus determine just where his own men were weak or strong, and whether he was giving his lumber away and making for himself a reputation for unreliability. The association believed that these inspection schools were furnishing the very best means yet devised for enabling members to keep check on their grades.

## Cooperage Trade Had a Poor Year

By J. Innes

The year 1914 was unique in the history of the cooperage industry of Canada on account of the serious effect that the war had upon it. The outlook at the beginning of the year was brighter than for many years past. Stocks at the mills were good, both in quantity and quality, and prices were satisfactory to the manufacturers. Large contracts were made by the consumers and there was every prospect of a busy year. Unfortunately, war broke out, and for a while all business was affected, but later the regular trades assumed nearly normal proportions. The scarcity of tonnage for export and the uncertainty of shipments going forward in time to prevent deterioration while in railroad cars, affected the export trade in apples to such an extent that hundreds of thousands of barrels of apples were not barrelled, but were left to rot in the orchards or were converted into cider and dried apples.

This condition affected the cooperage industry adversely, as large stocks of apple barrel material had been accumulated at the mills in anticipation of a heavy demand for apple barrels and a large perecentage of this stock will have to be carried over to 1915. As it costs about 1 per cent. per month to carry this stock, insurance, interest and some depreciation, if the manufacturers are to obtain profitable prices, it will mean higher prices this year for apple barrel material, as the mills are not likely to manufacture much of this stock in 1915 until they dispose of their old stock.

Mills are putting in very light stocks of logs this winter, and only putting in picked timber to make No. 1 stock such as flour, sugar and starch barrel material and as mills will only run on short time the cost of production will be high, as overhead expenses are much higher proportionately on part than full stocks.

It is doubtful what the year will bring forth, but there is a cheerful optimism prevalent which is bound to have a good effect on business conditions and we look forward in confidence to at least a moderate year's business.

---

There has recently come onto the Canadian market an increase of one hundred tons per day of unbleached sulphite pulp, among the new concerns being the Donaconna Paper Company, Donaconna, Que., the Belgo-Canadian Pulp and Paper Company, Shawinigan Falls, Que., the new plant of the J. R. Booth, Ottawa, and others, while the new fifty-ton sulphite mill of the Bathurst Lumber Company at Bathurst, N.B., will be completed in a few months.

# A Problem in Sawmill Equipment

### Expert Millwright's Advice On An Interesting Question Involving Manufacture of a Special Line of Logs

Editor, Canada Lumberman: Westboro, Ont., February 2nd.

I have received the following letter from a lumberman: "We have about five million feet of white pine logs, running from 6 inches to 30 inches diameter, the average being about 15 inches. The logs from 20 to 30 inches are defective; from 15 inches to 20 inches, a little better quality; from 6 to 15 inches, sound but knotty, a great many being top logs. We want to saw those logs into one inch, one and one-half inch, and two inch lumber, and will require a machine on which this can be done to the best advantage.

"We shall have about seven million feet of the following class of logs: hemlock, spruce, red pine, jack pine, fir or balsam, basswood, and black ash. The hemlock and basswood will be about the same size as the second size of white pine. The rest will run from 6 inches to 15 inches. In fifty per cent. of all those smaller size logs, knots are much in evidence, but they are otherwise sound; we want to saw the most of them into one-inch stock boards, 4-6-8-10 and 12 inches wide, with a proportion of 2 x 4, 2 x 6, 2 x 8 and 2 x 10 inches, and some squares 6 x 6, 6 x 8, 8 x 8 and 10 x 10 inches. We are looking for machines to do good, smooth sawing at a moderate cost. Yours, etc."

My reply to this letter was as follows: "For sawing the white pine, large and medium size, also the hemlock and basswood, from 15 inches to 20 inches, I would advise a band saw, with wheels 8 feet diameter, the saw 12 inches wide, 14 gauge, teeth spaced 1½ inches, speed 9,000 feet per minute or 357 revolutions per minute of wheels; the feed, 32 teeth to cut out one inch of kerf, or the log would feed forward 11 inches to one revolution of the saw. If the saw were 44 feet long I would advise a single cutting mill, with the sawyer in front, as he could better select the good from the faulty wood.

For slabbing the small logs, making cants or stocks from 4 inches to 12 inches, and sawing the squares as required, I would install a 48-inch circular and carriage; the speed of saw 9,000 feet per minute, or 720 revolutions. It would be 9 gauge, have 60 teeth, spaced about 2½ inches, the feed being 15 teeth cutting out one inch, or 4 inches to one revolution of the saw.

For cutting up the cants into 1 or 2 inch, or any other dimension that can be sawn in a gang, I would recommend a circular gang, for the reason that it would do as much or more work, and very much better sawing than any other machine in the sawmill today. The saws would be 36 inches diameter for the rough, knotty logs, 10 gauge thick, 36 teeth. The feed would be one inch to a revolution of the saw, or 36 teeth cutting out one inch of kerf. The speed would be 600 revolutions per minute.

In this machine the lumber is set 1/16 inch thicker than the dressing size, and it will make as many boards out of the log as the 14 gauge band saw and carriage where the boards require to be set ⅛ inch thicker than the dressing size.

The above machines, with suitable edgers, trimmers, etc., would saw 100,000 feet in ten hours; from 30,000 to 35,000 ft. with the band saw, and 65,000 to 70,000 with the gang. These figures are taken from mills in operation for the last six or seven years. The mill would require 35 men to operate it, all told, and woulid require 350 horsepower to drive it."—I. N. Kendall.

## Enjoying a Profitable Trade

Editor Canada Lumberman:— Hyde Park, Boston, Mass.

It would be natural for us to expect a slump in trade corresponding to that experienced by other manufacturers, but this has not been the case.

This may be due to the diversity of our products, fans systems and allied products include fans, heaters, engines, motors, turbines, shavings conveying systems, economizers and mechanical draft apparatus. You will see, therefore, that the range of use of our apparatus is so wide that we profit by receiving orders from those mills which are busy.

Under such circumstances we do not fear calamity, but our condition is probably different from that of most other manufacturers.

All the branch offices of our American company send in very enthusiastic reports stating that business has picked up greatly and that the amount of prospective business is very large.—B. F. Sturtevant Company of Canada, Limited.

---

A lumber camp building near Dacre, Ont., which was built in 1868 by the late Jonathan Francis, of Pakenham, and was used subsequently by Carswell & Mackay, is in such good condition that it is being used in connection with cedar logging operations this winter.

---

The Great Northern Railway is placing orders in the Province for dimension timber, piles and poles for shipment to the United States. Fifty carloads have already gone forward.

## Maritime Province Trade's Importance

Mr. W. B. Snowball, president of the J. B. Snowball Company, Limited, Chatham, N.B., in an address recently delivered at the Maritime Forward Convention in Amherst, N.S., spoke in part as follows:—

This is a critical period in the history, not only of Canada, but of our Empire. We may from now on make a distinctive forward movement, or it may be retrograde for some years to come. Opportunities are before us, and if we realize and use them, we can make great progress.

Probably the importance of Canada's trade in forest products, has not fully appeared to you. Forest products are worth to Canada, $185,000,000 annually. This does not mean that we export that amount, but the out turn of our forests in exportation and local consumption, amounts to that enormous figure. The exportation of forest products from the Province of Nova Scotia, brings in a revenue of $4,620,000 annually and from the province of New Brunswick a revenue of $7,300,000 annually. These figures will bring before you the importance of this industry.

I notice that in the year 1878 the exportation to Great Britain and the continent from the Province of New Brunswick was 368,000,000 super. ft. In 1880 it was 438,000,000 super. ft., while in 1913 it dropped to 271,000,000 super. ft. The exportation from Miramichi in the year 1880 was 160,000,000 super. ft., and in 1913, 74,000,000 super. ft. Take the province of Nova Scotia, and in 1884 the exportation, which was then about normal, was 69,000,000 super. ft. In 1897 it was 185,000,000 super. ft., and in 1908 the best information I could get was that it did not exceed over 50,000,000 super. ft.

It is within the memory of anyone present who is conversant with the lumber business, that the prices in 1880 were at least 30 per cent. to 40 per cent. less than the prices in 1913. Why is it that the exportation has dropped so enormously? Is it that we have depleted our forests during the period when our exportation was so high, so that they are not capable to-day of producing the same quantity annually? Are we to-day cutting only the annual growth or are we exceeding it? This is something we should carefully consider. This is a year in which all those engaged in the lumber business should sound a note of warning in case with the increased demand for the forest products in both sawn lumber and pit props, and the high prices being paid, that we permit avarice to overcome good judgment, and thus materially injure our forests, whether privately owned or the property of the Crown.

At the present time the lumber business in the Maritime Provinces stands in possibly the best position of any industry in Canada, and it is to be hoped that the lumbermen will guard this position by not making too large a production, but so control it as to continue the prosperity that has come to them, and which has been so long in the coming. Don't let us either kill the goose that lays the golden egg or smother those who buy.

Expert testimony states there is 680 super. ft. of waste out of every thousand feet of lumber that is taken from the forest. This seems like an enormous waste and if it exists to this extent, some effort should be made to overcome it. If from the 320 ft. of forest product that is used, we get $182,000,000 annually in this Dominion, how much more would we have had if we had used more closely the product of the forest, or how much less would have been cut if we had used it more prudently. The trouble is that we consider our forests are inexhaustible, and we use them too lavishly.

A comparison of New Brunswick and Nova Scotia shipments of 1880 and 1913 should be a warning. What will be the showing at the end of another thirty years if we continue the same methods?

A 9-in. log, 16 ft. long, by the New Brunswick scale, which I presume is the same as the Nova Scotia, is 48 ft.; by the Quebec scale, 45 ft., and by the Ontario scale, 25 ft. This is a great difference in the scaling. The bulk of the lumber sawed in our provinces has been cut by either an 8 gauge gang saw or rotary saws using 5-16-in. inserted teeth, and in every 9-in. log sawn, there is a waste of approximately 16 ft., or 320 ft. to the thousand, which at $15 per M. with the average sawing of a rotary, say 20 M. per day, is $96 per day wasted in sawdust without taking into consideration the waste in slabs and edgings which is tremendous in an ordinary operation. This will account for part of the waste of 680 ft. Can we save any of it? Why not use less extravagant methods of sawing? Why not use up more closely our waste? Is there not some use to which we can put sawdust? I have seen horse and cattle feed, that has produced good results in feeding, that was made from sawdust. I have seen gas produced from sawdust operating a gas engine of 240 h.p., and I have seen sugar made from sawdust, and probably before many years, the waste from bark, and other wastage from our mills, will yet be used profitably.

The Conservation Commission, of which I am a member, is starting a research work in connection with McGill University and I feel we cannot be too prompt in finding some method of utilizing profitably the waste product from our mills, instead of burning it up as we do at present.

I have noticed a remark that a forest is only lazy lumber, that we should wake it up with a saw and set it to work. I, however, differ from this, and think that a forest of young growth should not be destroyed any more than we would destroy the young of the animals on our farms before they have reached maturity.

In our locality we allow that the trees will increase in size 2 ins. in 8 years. A butt log 16 ft. long and 8 ins. at the small end, and 10 ins. at the butt, will measure 40 super. ft., and a log 16 ft. long and 10 ins. at the small end, will measure 64 super. ft. Twenty-five of the former logs which are really only pulp wood, at $8 per M. are worth 32c. per piece, while the logs 16 ft. and 10 ins. are worth $10 per M. or 64c. per piece, or in 8 years they have doubled in value. Is there any more profitable investment for your money than letting the forest grow?

Dr. Fernow in 1909 made a forest survey of the province of Nova Scotia, and if I remember correctly he stated that 70 per cent. of the area he travelled over was only profitable for lumber growing and if given a chance would produce a good growth of lumber. Why not take advantage of suggestions made public in his report.

## Fire Protection in the Lumber Yard

Fire protection plays a most important part around saw mills and lumber yards, and every lumberman aims to have the best in this respect. A system now on the market which is most efficient and already in use by many leading Canadian lumber firms is known as the Hardinge Watchman's Register sold by the Lintz-Porter Company, 27 Yonge Street Arcade, Toronto, who are general agents for Canada.

The Hardinge Watchman's Register consists of the Hardinge Patrol Watchman's Portable Clock and a series of recording stations. The great advantage of this system is that stations may be placed in the yard at the end of any alley and simply screwed to the lumber pile, and when changes are required in the yards they can be removed and placed at other points where needed, no electric wiring being necessary. The stations are weatherproof and tamperproof. All screws used to attach a station to the support being sealed in place with metallic seals.

The manufacturers claim many exclusive features for this system which are not found in any other. It is the only system in which the recording key is not removed from the recording stations to make the record, and in which the embossed letter is not exposed. The character cannot wear off and are not subject to mutilation or duplication. The clock used is of the same size and weight whether one or one hundred recording stations are used. The company claim that this is the only system in which no two of a series of recording stations need be alike for, instead of the customary numerals, the Hardinge System employs large legible letters which may be so arranged as to spell the name of the firm, the name of the section of the plant in which the stations are located, or any other arbitrary word or phrase which may be determined upon.

The manufacturers give an unlimited guarantee and are prepared at any time to replace or remedy free of cost any imperfection which may be traceable to imperfect material or workmanship.

The cost of installing the system, they claim, is much lower than that of a magneto electric clock system.

The comparative cost of Magneto and Hardinge Patrol systems supplied are given by the company as follows:

| | Magneto | Hardinge Patrol |
|---|---|---|
| 6 stations ... ... ... ... ... | $112.15 | $ 59.60 |
| 10 stations ... ... ... ... ... | 172.25 | 74.80 |
| 15 stations ... ... ... ... ... | 236.50 | 93.80 |
| 20 stations ... ... ... ... ... | 300.75 | 112.00 |

These prices are based on an average cost of wiring up magneto stations to the clock in the office of the plant. The Hardinge needs no wiring and there is no expense of installation beyond a man's time putting up each station around the plant. The one manifest advantage of the system is that there are no wires to be broken through handling the lumber.

## The Worst Has Come and Gone

Editor Canada Lumberman:— Montreal, Que.

It is the writer's opinion that the worst has come and gone, and he is very optimistic for the present year. He does not see any reason why we should not look for business to settle down and although there are going to be great hardships while this terrible war is raging, feels satisfied that all people in Canada should do missionary work, and prepare for the time when it is over. There is no doubt that business will be better than ever. Canada is a country that should be, in the future, a land of great promise, but everyone here must do as he preaches and practice buying goods "made in Canada." If we are to succeed we must keep the balance of trade, and everyone must work with that idea.—Sadler & Haworth.

# Machinery and Equipment

**What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing**

## Swedish Machinery on the Canadian Market

Swedish machinery has an excellent reputation, and an examination of a very fine catalogue, excellently illustrated, issued by the J. and C. G. Bolinders Company, Limited, Stockholm, shows that Sweden is able to produce a complete range of wood-working appliances. This firm's machinery has obtained 140 prize medals, including five grand prizes, in addition to 106 diplomas of honour. The company intend to make a vigorous effort to secure business in Canada, and with the long line of machines should be able to obtain a satisfactory turnover. Many of the machines have appliances new to this country. The illustrations in the catalogue, reproduced from photographs, show the machines to be well manufactured and finished. The appliances include standard log and saw frames, new ideal frame, precision log frame, rip saws, improved edger, fast feed flooring and match-boarding machines, planers, moulders, outside moulders, surfacers, shavings cutters, double resaws, resaws, band resaws, lath and rip saws, cross-cut saws, grinding machines, automatic boxboard machines, patent special cutters, also tools and accessories. Many of the machines are made in several sizes and for special purposes. The catalogue gives details of these machines, and is complete in every particular.

One of the features is the patented precision log frame, which is the result of many experiments. It is designed not only for the Swedish timber—small grown soft timber—but also for the ordinary run of timber found in various countries. Thin saw blades are used for all log diameters, the saw kerf being about 1/16 in. The carriage is brought by mechanical power to the log haul, and the latter automatically loads the log on to the carriage. Afterwards all manoeuvering is accomplished by means of levers, which control the movements of the log in any direction. The upper pressure rolls adapt themselves automatically to the varying diameter of the log whereby the hand adjustment of the ordinary log-frame rolls is obviated. The rolls control the most irregular log with ease and guide it with precision through the machine. As soon as the sawn log has passed through the frame, vertical and horizontal rolls are automatically set in rotation and transport the lumber to a conveyor. The makers state that the accuracy obtained with the maximum feed and a saw kerf loss of only 1/16 in. is due to the fact that all excessive pressure on the saw blades is avoided by letting each tooth take its proper share of the work. This can only be realized by making the overhang of the saw blade frame and the feed rate change automatically, according to the diameter of the log at every movement. As the diameter of the log being sawn changes, either increasing or decreasing, the motion of the feed rolls changes correspondingly.

By means of an eccentric and lever system entirely automatic in its action, both the saw blade frame guides and the friction disk of the feed rolls are governed by a form or curve which is constructed from a diagram giving the correct ratio of overhang and feed rate to any diameter. For sawing crooked logs there is a device which makes it possible for the log to be guided through the machine in a line corresponding to its crookedness by setting the feed rolls out of parallelism with each other. This is accomplished by a hand lever in the changing carriage; at the same time, a graduated scale gives the amount of variation made. The log-frame is entirely self-adjusting. The machinery is built from only the highest grade Swedish material, guaranteeing stability and correctness as well as long wear. The Canadian agents of the J. and C. G. Bolinders Company, Limited, are the Swedish Steel and Importing Company, Limited, 503 Canadian Express Building, Montreal.

## Packards Produce Important New Motor Truck

An entirely new line of motor trucks is announced by the Packard Motor Car Company, of Detroit. The series, ranging in capacity from one to six tons, inclusive, possesses numerous features that result in economy to the user and overcome the difficulties formerly identified with the installation of worm drive.

The 1-ton Packard is a new addition and marks the entrance of the company into the light duty field.

Each unit is designed especially for the duties required of a truck of that capacity. So carefully have the Packard engineers developed the new product, that it has taken three years for the forework. The preliminary trucks, during the final test, were driven a distance equivalent to five times around the earth. This mileage was established over the roughest road conditions to be encountered between Michigan and the Rocky Mountains.

The matured design which has been evolved in the new models as the result of ten years experience in building motor trucks will, doubtless, remain substantially unchanged for several years.

The builders express a complete confidence in having achieved a truck design which not only renders the maximum service with the minimum cost of up-keep but also with the minimum attention and effort on the part of both the owner and his employees.

Evidence of the improved design of the new Packards is indicated

Patented Precision Log Frame made by J. & C. G. Bolinders Company, Limited, Stockholm, Sweden.

in their quietness of operation and their centralized control. The latter feature is entirely new in heavy duty trucks and means complete mastery of the vehicle from the driver's seat.

The new models have left drive and left side levers which provide a greater ease and safety of operation in congested terminals.

The Packard motor is automatically governed to prevent overspeeding by reckless drivers and the resultant abuse of the vehicle. The carburetor is automatically controlled and hot-water-jacketed, while the ignition system is so ingeniously protected as to be practically waterproof.

These newest of commercial efficiency machines have provision for electrical cranking and lighting apparatus, also a power take-off for operating independent mechanism.

Despite large orders from Europe, the Packard truck shops, the largest in the world, are prepared for early deliveries of the new models.

# Reports on Trade by Machinery and Equipment Firms

### No Uncertainty About the Good Prospects

Editor Canada Lumberman:— Toronto, Ont.

We must confess to a little feeling of surprise that there can be any room for doubt as to the prospects for 1915.

In our opinion the immediate outlook for Canadian farmers, business men and manufacturers is better than it ever was before in the history of the Dominion.

We have reached the end of a period of reckless speculation and fictitious values. Some of us have perhaps been brought down from our airy flight with a very sudden jolt, but at least we have the satisfaction of finding that the good old earth of Canada is a very solid thing to fall back on.

Our facilities for borrowing huge sums of capital abroad have suddenly been cut off, and we are thrown back upon our own resources. Development therefore must come from within, and it must be evident to everyone that such a growth will be more permanent and satisfactory than much of the unhealthy development of the last few years.

So far as the Herbert Morris Crane & Hoist Company, Limited, is concerned, we have every confidence in the future. Since the outbreak of war, our business has shown a steady and satisfactory increase, and we are doing our part towards ensuring and sharing in the general prosperity which we believe will fall to the lot of Canada in 1915.

Let every responsible Canadian imbue himself with a spirit of cheery optimism and a desire for real efficiency, and the results will not long be in doubt.—The Herbert Morris Crane & Hoist Company, Limited.

### Expects a Partial or Complete Recovery

Editor Canada Lumberman:— Galt, Ont.

Referring to general trade conditions in the woodworking machinery, we may state from our own experience in this line we have found during the past twelve months that there has been a decided decline in the demand, which was further accentuated at the declaration of war. The business offering since that time has practically been nothing, excepting the demand created by the manufacturers of war material, who on receiving contracts for material, were limited purchasers of woodworking machinery.

We are, however, pleased to state that so far this year there has been a considerable increase in the number of inquiries for woodworking machinery, and we believe that the business should show quite a revival during the spring months, as there appears to be considerable interest shown with a view to spring purchases. We believe that we will have a partial if not a complete resumption of normal conditions in this line of machinery during the summer months.

The chief difficulty in the way of most purchasers of this machinery is the apparent difficulty which the consumers are experiencing in the collection of their accounts, which restricts their available funds for new equipment.—Canada Machinery Corporation, Limited.

### Counting Upon Steady Improvement

Editor Canada Lumberman:— Port Hope, Ont.

The conditions in 1914 were a natural reaction after over expansion and construction, accentuated somewhat by the war. For the last few months the country has been living on accumulated stocks and therefore the manufacturers have not been called upon to make the quantity of goods actually used. These stocks are now exhausted and we anticipate very shortly that the manufacturers will experience an increase in the buying, as products consumed will have to be replaced.

It is the goods consumed in daily life that gives the manufacturers the bulk of their business. New construction work is good to have, but it is the smaller part of the business. We believe we will all experience a steady improvement in business through 1915. The country will accommodate itself to conditions abroad, as our home market for manufactured goods is our big market.—Nicholson File Company.

### Have Had a Very Busy Year

Editor Canada Lumberman:— Fort Frances, Ont.

Russel Brothers, manufacturers of the Shaw Motor Headworks, have had a very busy year and have booked orders for about as many of these boats as their present staff can turn out for spring delivery.

Out of six lumber and tie firms in this district five are using the Shaw Motor Headworks for towing, this year, and the firms who have been using them in the past speak most highly of them.

Owing to their light weight, immense power and cheapness of operation, they are creating a very favorable impression among all their users.

With the exception of the gasoline engine, which this firm cannot buy satisfactorily in Canada, the Shaw Motor Headworks is wholly Canadian workmanship and material.—Russel Brothers.

### Expect Greatly Improved Trade Conditions

Editor Canada Lumberman:— Hamilton, Ont.

We are in much the same position as most other manufacturers, viz., that at the declaration of war our business fell off to practically nothing, but after about a month it began to revive, and has been improving ever since, until today it looks as though the year 1915 will bring us something like fifty per cent. of normal business. This is without considering any orders which we might receive for war material. We believe that trade conditions will greatly improve in Canada, first because we believe the allies will gradually advance towards Berlin, and secondly, because the stock of goods in Canada will gradually be depleted. After the war is over, and conditions have an opportunity of adjusting themselves, we believe that Canada will go ahead by leaps and bounds.—The Smart-Turner Machine Company, Ltd.

### Believe 1915 Will Show Improvement

Editor Canada Lumberman:— Kalamazoo, Mich.

The year 1914 was very fair with us until the first of August. August and September were poor months. October and November were very poor months to put it mildly. If we express it as we should, we say that they were "rotten." In fact the last two months mentioned were the poorest that we have had since 1897. The month of December showed a substantial improvement, although we can easily class it as "poor." Our Canadian business always increases and decreases with the rest of our business, and has done so during the past year.

We believe that 1915 will be a better year for us than 1914 was, but we do not expect a "boom." However, we shall be glad to be surprised.—Wm. E. Hill Company.

### A Little Better Feeling in the Trade

Editor Canada Lumberman:— Brantford, Ont.

Trade in the lumber business, particularly in the centre and west, has been extremely poor.

In the Eastern Provinces, apparently trade has been better, but the conditions have been such in all parts of the country that there has been practically no demand for sawmill machinery.

It is a little too early in the year to be able to express our opinion regarding what trade may be like, but it seems to us that there is a little better feeling than there was a few months ago, and this may develop into an improved demand. Conditions, however, are so unusual that it would take very little to upset what looks like prospects for a possible improvement.—The Waterous Engine Works Company, Limited.

### Looks With Confidence to the Future

Editor Canada Lumberman:— Montreal, Que.

Along with all other industries in Canada, particularly those associated with the manufacture of steel and lumber, we have naturally felt the effects of dislocation in trade, due to the war. However, we look with confidence to the future. A greater demand has been created in Canada for goods in our line of the very best quality, so that the demand for our product is greater than it has been, for we find that the mills are looking for a greater production per day, and a better grade of manufactured lumber is demanded, so that the best saws and machine knives are demanded regardless of prices, and the day of cheap saws and knives has past.—Simonds Canada Saw Company, Limited.

# WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted—Lumber

### We Want to Buy

1¼ Birch, No. 1 C. & B, dry.
1½ S. Elm, No 1 C. & B., dry.
The Manufacturers' Lumber Co.,
3-4 Stratford, Ont.

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 7-tf

### Wanted

2,000,000 ft. White Birch Sqs. ⅞-in., 1-in., 1⅛-in., 1¼-in. up to 2-in. Lengths 2-ft., 3-ft., 4-ft. and 6-ft. Clear stock. Write M. Mitchell, Lucknow, Ont. 1 t.f.

### Spruce Lath Wanted

Good mill run 1½ x ⅜ x 4 ft. for immediate shipment. State quantity and price f.o.b. shipping point. Box 133, Canada Lumberman, Toronto. 4

### Hemlock Wanted

Block, 2-in. dry. Must be well made. Sizes piled separately. Quote lowest prices, point of shipment, Spring delivery, for No. 1 and down tally (No. 2, if any). Also Cedar Poles peeled, 35 ft. and over in length, 7 in. top, and Spruce 1 x 12 in. Box 137, Canada Lumberman, Toronto. 4

### Wanted To Buy

500,000 ft. 1-in. Cull Pine.
50,000 ft. 1-in. Cull Basswood
50,000 ft. 1-in. Cull Hardwood.
1,000,000 ft. 1-in. and 2-in. Hemlock.
200,000 pieces 1½-in. lath.

Apply Box 139, Canada Lumberman, Toronto. 4-7

## For Sale—Lumber

### We Have a Full Stock

of Hardwood, Hemlock and White and Norway Pine Lumber, Norway and White Pine Piling, up to 60 ft. Keenan Bros., Limited, Owen Sound, Ont. 3t.f.

### We Can Cut To Order

Spruce or White Pine Timber up to 12 x 12. Inquiries solicited.

H. C. DUNBAR,
1 t.f. Haileybury, Ont.

### For Sale

400 Spruce Spiles, 60 ft. long, 7 in. tops. Also any quantity Spiles 35 to 50 ft. long. Prompt shipment.

The Northern Lumber Mills, Limited,
21-t.f. North Cobalt, Ont.

### Logs For Sale

About 3,250,000 feet red and white pine logs, 90 per cent. white pine. Can be delivered on Georgian Bay early in June. These logs scale about 43 ft. to piece, and are now dumped on the ice. Address Box 142, Canade Lumberman, Toronto. 4

### Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

## For Sale—Machinery

### For Sale

One Whitney 50-in. scraping machine; complete with knife grinder. It has been in use about one year. Will sell on easy terms. Address

AMERICAN COMPOUND DOOR CO.,
4-7 21st and Morgan Streets, Chicago, Ill.

### 75 H. P. Steam Boiler

with usual fittings, all in splendid order. Band rip saw, Fay & Egan make, shaving exhaust double fan, with quantity of pipes, etc. Flooring matcher, with Sherman flooring boring machine, also shafting, hangers, pulleys. Also a complete saw mill, capacity about 10 M., including good building if wanted. Cheap for cash, or terms, or Hardwood lumber taken in exchange. J. S. Findlay, Owen Sound, Ont. 3-10

### Woodworking Machinery For Sale

1 No. 51 Crescent universal woodworker; 2 24-in. planers and matchers; 3 12-in. buzz planers; 1 12-in. four-side moulder; 1 No. 802 Canada Machinery Corporation shaper; 5 30-in. Ideal pedestal bandsaws; 2 No. 619 Canada Machinery Corporation saw tables; 1 36-in. double drum sander; 1 20-in. American wood scraper.

H. W. PETRIE, LTD., Toronto.

### Rebuilt Veneer Machines

We have the following rebuilt Coe veneer lathes and clippers ready for immediate shipment:

Lathe, 50-in. swing, 88-in. knife, 6-in. spindles.
Lathe, 50-in. swing, 64-in. knife, 6-in. spindles.
Lathe, 50-in. swing, 64-in. knife, 5-in. spindles.
Lathe, 50-in. swing, 76-in. knife, 6-in. spindles.
Lathe, 42-in. swing, 52-in. knife, 5-in. spindles.
100-in. power clipper.
64-in. foot power clipper.

These machines are decided bargains and carry the same guarantee as we give our new ones. Prices on application.

THE COE MANUFACTURING COMPANY,
23t.f. Painesville, Ohio.

## Wanted—Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

Position wanted as band saw filer, double or single cut. A1 references. Address Box 140, Canada Lumberman, Toronto. 4-7

Position wanted as saw mill foreman or millwright. Can give best of references. Age 44. Address Box 141, Canada Lumberman, Toronto. 4-7

Mill or General Superintendent wants position. Eastern and western experience. Splendid record. References. Box 131, Canada Lumberman, Toronto. 3-6

Accountant, office manager, wants position. Sixteen years' experience in lumbering, mining, manufacturing furniture, sash, doors and blinds, salesmen's accounts and collections, also duties of secretary-treasurer. Excellent testimonials. Box 295, Burlington, Vt., U.S.A. 4

A1 Band Saw Filer wants position. Double or single cut. Will go anywhere with good season's cut. Best references. Box 138, Canada Lumberman, Toronto. 4-7

Band Saw Filer open for position. Used to cutting hard or soft wood in saw mill or factory. Box 124, Canada Lumberman, Toronto. 2-5

Position wanted as Salesman or Bookkeeper. 14 years' practical experience in all branches lumber business. Good references. Not object going to a mill. Address W. L., 247 Guy Street, Montreal, P.Q. 4

Book-keeper, experienced in lumber accountancy and collections, open for engagement about April 1st. Can furnish excellent references. Box 134, Canada Lumberman, Toronto. 4-5

Wanted to get in communication with a lumber firm who need the services of an up-to-date circular mill man, to take charge and do his own filing. W. H. Nogar, 128½ Lansdowne Avenue, Toronto, Ont. 4-6

Lumberman wants position as manager of a retail lumber yard. Has had eleven years' experience. 29 years of age, married, sober. Can give best of references. North preferred. P. B. Starmer, 1217 Campbell Street, Kansas City, Mo., U.S.A. 3-4

Position wanted by manager. Have learned the business by practical experience, east and Pacific Coast. Managed all branches; expert on manufacturing, also mill designing and building. Good organizer and cost reducer. References guaranteeing efficiency and character. Box 130, Canada Lumberman, Toronto. 3-7

## Wanted—Employees

**Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents**

WANTED—An experienced shipper to ship and inspect lumber in Ontario. Apply Box 135, Canada Lumberman, Toronto. 4-7

WANTED—First-class man for travelling and selling lumber in Ontario. State age, experience and salary expected. Apply Box 136, Canada Lumberman, Toronto. 4-7

## Business Chances

### Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

### Sawmill For Sale

Saw, Planing and Shingle Mill with lumber yard in connection. Building 46 x 70, steel roof. Capacity of sawmill, 12 to 15 M. per day. Lots of timber. A good retail business and a good business building summer cottages. This is a rare opportunity for a man with some push and a little capital to make some money. Good shipping facilities by water, 10 miles of the best of roads to Brucefield station. Owing to a combination of bad health, other interests and a heavy financial loss, I will accept any reasonable offer and give any reasonable terms. Will keep a half interest with working partner. Come and see this and go over the books. W. A. Mustard, Bayfield, Ont. 3

## Miscellaneous

### Wanted To Purchase

200 to 300 boom chains, ½ inch thick and nine feet long, with toggles and rings attached. Name best price for cash f.o.b. cars shipping point.

MONTEITH BROTHERS,
1-4 Rosseau, Muskoka, Ont.

### Wanted

Second-hand Alligator Tug. Box 142, Canada Lumberman, Toronto. 4

### Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

### Saw Mill Machinery For Sale

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

### Self-Oiling Bearings

It is difficult to understand why self-lubricating types of bearings are not used more on woodworking machinery. They are used in the principal bearings, true enough, but why not use them also on the less important bearings, so as to allow the workman to totally forget the oiling routine for a month at a time?

You have all seen the electric fan in the boss's office and you know it runs at a mighty high rate of speed. But have you ever seen anybody oil it? No, you haven't. It is oiled by a wick that runs down into an oil pocket, and as long as there is oil in the pocket, capillary attraction will do the job of oiling.

I once ran a wick-oiled shaft for six months on one oiling, just to see what would happen—nothing happened. I believe I could have run it six more months, for there was still oil in the pocket. The rate of oiling depends upon the size of the wick. As to the length of the wick, I do not know; I have never experimented with various lengths. Perhaps some reader can tell us definitely.—N. G. Near in the Woodworker.

The manufacturers of musical instruments in the United States report the use of 41 woods to the amount of 260,000,000 ft. a year. Following are the musical instrument woods of the United States, arranged in the order of importance, from those demanded in largest amount to the least: Maple, yellow poplar, chestnut, spruce, oak, elm, birch, basswood, white pine, red gum, mahogany, black walnut, beech, ash, cottonwood, yellow pine, sugar pine, hemlock, Douglas fir, tupelo, cherry, sycamore, redwood, Cir-

cassian walnut, balsam, fir, butternut, West Indies boxwood, cypress, ebony, rosewood, cedar, Spanish cedar, buckeye, satinwood, prima vera, holly, eucalyptus, camphorwood, tulip wood, hickory, Turkish boxwood.

### Turkish Boxwood

Numerous trees known as boxwood grow in various parts of the world, but there is only one Turkish boxwood, and it has become scarce. It has been planted all over southern and western Europe, but the wood grown there is lighter, and is inferior to the best that comes from the tree's native hills in Asiatic Turkey and Persia. It grows in the same region that produces Circassian walnut, in the country south of the Caspian and Black Seas. The tree seldom exceeds a height of 25 ft. and a diameter of 9 ins. Few logs are more than 6 ft. long; and the majority that reach market are 3 ft. or 4 ft. long, and less than 5 ins. diameter at the big end.

The wood is yellow. High-grade (not cheap) carpenter rulers are made of it, and the color never fades. No sapwood is used, for the very good reason that there is none. It is a peculiar wood in that respect. Many kinds of trees have little or no heartwood, but few lack sapwood. The boxwood may have a layer of sap of the thickness of writing paper.

Planted trees in Europe and America grow with fair rapidity, and the annual rings are fairly distinct; but on its native hills its growth is very slow and the yearly rings scarcely visible. The wood varies greatly in weight; some of it is little heavier than hard maple, other sinks at once if dropped into water. It is very hard, but does not measure up with lignum vitae or ebony.

Boxwood from the West Indies is replacing the Turkish article, except where the best is demanded. The two woods look much alike, but the West Indies trees are larger, and the wood is of less pleasing color.

### Competition in Oaks

The international strife is breaking up old trade relations, and new ones will be established. If the English, for reasons satisfactory to themselves, should decide not to use Austrian oak, there is no reason why they should not use the American wood. It is of as high grade as Austrian oak, as high in class, as high in character of its service, and the only thing in which it does not rate as high as the Austrian wood is price, says an American writer. The commercial oak of Austria, England, Italy, and of most other regions of southern and western Europe, is all of the same species. If there is any difference in the wood, it is a difference due to soil and climate. It is handsome and substantial. Its colour is a little darker than old, mature American white oak, and not so dark as old red oak. It has a pleasing, subdued tone. It may be quarter-sawn, and that is sometimes done; but it is said that the plain-sawn stock is more popular in Europe; and it is certain that little quarter-sawn European oak is ever seen on the American side of the Atlantic. When this oak goes over there it is sold at about double the price of mahogany. It is not claimed that American oak is an exact substitute, but the claim can be made without reservation that it is as handsome and as serviceable. It is useless to waste time with poor or common stock. The English are good judges of wood, and while probably somewhat severe in condemning what does not please them, they are fair in their decisions. The American oak should win on its merit, and it ought to be given a chance to take some of the market which Austrian oak seems in a fair way to lose.

### The Excelsior Industry

The makers of excelsior in the United States consume 100,000,000 feet of wood a year in the production of this commodity. Its use has greatly increased in recent years. Formerly it was in demand principally for certain classes of upholstering, but it is now in use chiefly as packing material in place of straw to protect crockery and fragile castings from breakage. It is superior to straw for that purpose. It possesses greater elasticity, and when the question of handling is considered, it is often cheaper.

Excelsior consists of thin, narrow shavings or ribbons of wood cut by machinery from bolts of short length. The bolts are placed in the machines and the ribbons are cut lengthwise with the grain of the wood. The machine is provided with a battery of knives which slit or score the surface of the bolt with parallel cuts whose distance apart determines the width of the ribbons which are shaved off by a second knife.

Different grades of fineness are cut by regulating the distance the slitting knives are spaced apart, and the thickness of the shaving cut off. The extra fine grades are called wood wool and have been used as a substitute for lint or absorbent cotton. However, the usual grades are much coarser.

The selection of wood for excelsior is important. A number of kinds will answer, and a number of kinds will not. The wood must be soft and thoroughly dry. It must be elastic and tough. A wood which in the bolt or billet may not be considered tough, may be wholly satisfactory when sliced in narrow ribbons. Cottonwood is of that kind. Ordinarily, it is neither strong nor tough; but the thin shavings or ribbons do not easily break, and they are quite elastic. It can be readily understood that if the fibres of excelsior break and splinter, the product loses much of its value. A number of woods that are light and soft are not suitable for excelsior becaues the fibres break too easily. Chestnut is such a wood.

Excelsior is more saleable if the wood is of light color. It has a better appearance. Light weight is likewise desirable. When it is used as packing for goods to go by freight, express, or parcel post, the weight of the packing must be paid for as well as the weight of the merchandise, and every pound saved adds to the profit.

The trees of the cottonwood group, including common cottonwood, aspen, and balm of gilead, are the most important in the excelsior industry.

There is not much waste in an excelsior operation. Though knots are rejected, the ability to use short lengths makes it possible to work very closely.

# Review of Current Trade Conditions

## Ontario

Considerable improvement is reported from the trade in Ottawa. A few good orders from local sources have already come out, as a result of the prospects for an early spring. Interesting enquiries are also at hand from Great Britain and from the United States. The representative of the British War Office, who was recently in Ottawa placed large orders for lumber to be used as railroad ties, bridge timbers, etc. Most of these orders, however, went to British Columbia firms. The export trade is very quiet, as is usual at this time of year. Woods operations have been continuing under good conditions, with heavy snow falls and good cold weather. Teaming conditions are therefore excellent. Ottawa retailers are not looking for a very active season, although there will be a far greater amount of trade on account of the demand for material for military barracks.

In the country districts in Ontario many retailers report that the prospects are fairly encouraging for a good trade in the spring. Farmers are, as a rule, in good financial condition, although they will need considerable encouragement in order to persuade them to spend their money instead of laying it up against a future rainy day. Prominent wholesalers state that they are meeting with a slightly improved demand for most stocks, recent advances in the price of yellow pine following upon the introduction of higher freight rates in the United States have had a beneficial effect in Ontario, although actual prices have not shown any decided stiffening. The demand for hemlock continues weak. Hardwoods are quiet, but in most cases firm. One hears frequently of very interesting orders being placed for material required by Great Britain on account of the war. There are also a number of reports of important wood consuming factories again coming into the market for supplies. Most of these plants have been getting along on very small stock for the best part of a year and, now that they find the public once more showing a tendency to spend money they are loosening up a little bit themselves. Taking into consideration the general unsettled conditions, wholesalers, manufacturers and retailers all agree that trade conditions today are by no means as unsatisfactory as they might have been expected.

## Eastern Canada

No new development can be reported in the lumber trade situation in Eastern Canada. Quiet trade continues at Montreal and throughout Quebec. There is a fair prospect for trade of normal volume after the mild weather comes, but it will depend very much upon the conditions in connection with the English markets and especially upon the ability of transatlantic shippers to obtain tonnage. Woods operations throughout eastern Canada have been favored with excellent weather since the end of the January thaw. There has been plenty of snow in the woods and clear, frosty weather has been general. This has made hauling operations easy and will help to reduce the cost of logs. Much will depend, of course, upon the conditions prevailing during the driving season, but up to date the logging operators are pleased with their progress. Local demand at all eastern points is quiet without much indication of activity.

The spruce market at Boston continues quiet. Some of the large retail yards are not yet in a position to pay off their obligations for lumber already purchased and consequently are not contracting any new debts until their customers have settled up. It is expected, however, that quotations will become firmer in the course of a few weeks. The brisk English demand has induced several of the Maine manufacturers to look for good prices and quick collections. New England production of spruce will be lighter than the average this winter. The base quotations today on frames is $24, with a little business at 50c less. The demand for random is quiet. Boards also are quiet.

Shingles at Boston are weak with offerings heavy and a light demand. Most of the business at present is at $3.35 to $3.45 for white cedar extras; $2.80 to $2.90 for clears, and $2.50 to $2.65 for second clears. Red cedar quotations are uncertain. Some fancy makes coming by rail are offered at $3.65 and up, but others by way of the Panama Canal are quoted much lower. Arrivals of lath are heavier than the market requires. The best 1⅝ in. are bringing $4.15. For 1½ in. the range is $3.70 to $3.75.

## Great Britain

Business on the spot market at London is still fairly brisk and large quantities of wood are going into consumption. There are still considerable stocks of yellow and red pine on hand, of the lower qualities, and there is a good market for these on account of the high rates ruling for yellow and white fir goods. Recent imports from the north of Europe have been small. Two cargoes of St. John spruce recently arrived and were very useful in filling up the gaps in stocks. Very little forward buying is reported at present, as most people are satisfied to wait for the development of events. Deliveries at London docks for the week ending January 16th amounted to 3,970 standards as compared with 3,340 standards during the corresponding week of last year. At Foy, Morgan & Company's recent auction sale 3 x 10 third Quebec and Montreal yellow pine sold at £16 15s and £16 10s. 3 x 9 and 11 in. Quebec varied from £17 to £16 10s. 3 x 8 Quebec sold at £15 15s and 3 x 7 at £15 5s.

At Liverpool, spruce prices are still advancing on account of the difficulty of obtaining freight. Stocks in the Liverpool district are gradually being denuded of favorite sizes. It is reported that if tonnage could now be secured even at the present high rates, the cost, freight and insurance, to any port on the Mersey, or any west coast of Britain port, for a cargo of spruce deals of the ordinary specifications would be higher than the record figures up to date. Whatever may be the solution of the present position of the freight market, there does not appear to be any likelihood of relief for the timber trade until international transport again becomes normal. Practically all the available tonnage is taken up with grain and cotton.

Stocks of Canadian pine deals are disappearing steadily. Firsts have gone off the market and consumers who formerly used the highest stocks are now obliged to take the lower grades. The principal importers from Ottawa, however, are holding off, on account of the general unsettled conditions. The estimated total imports of spruce into the United Kingdom, according to the chart issued by Smith & Tyrer, Limited, Liverpool, during the year 1914 was 205,880 standards as compared with 229,540 standards during 1913. At Liverpool and Manchester the stock was 25,570 standards in January, 1914. At the end of the year it had been reduced to 11,950 standards. The consumption reached its maximum in August, being then 10,930 standards. Prices for the year ranged from £8 10s in May to £14 10s in December; and freights varied from 35s to 80s.

## United States

Trade conditions in the United States are unquestionably becoming better, although the improvement is not quite so extensive as was expected earlier in the year. There are widespread fundamental reasons for believing that improvement will continue although possibly at a rather slow rate. In the middle west conditions are showing very definite improvement, largely as the result of high prices being received for food stuffs. Orders for all kinds of finished steel products have been increasing and operations at the mills are heavier. The United States Steel Corporation is reported to have increased its pay roll by 25 per cent. since December. The large volume of foreign enquiries and orders for United States products since the beginning of the war is also an important factor tending towards trade improvement.

In connection with the lumber trade it is quite justifiable to report that conditions today are practically normal for this time of year. Now that money has become more plentiful and easier to get, building projects are expected to increase as soon as the weather permits. The railway companies, moreover, have secured a large percentage of the advance in rates which they desired and are expected to come into the market for lumber. Some of the prevailing conditions are better than those of a year ago, particularly the situation in connection with stocks. Curtailment has been largely carried out throughout the south and the Pacific Coast and should have a beneficial effect upon prices as soon as trade becomes active.

Improvement is reported in the yellow pine trade. Some of the important railroad companies are placing orders for bridge timbers, ties and lumber for general work. There is also a better demand for car repair material. It is reported that the Illinois Central has sent out enquiries for material for 1,000 refrigerator cars. The New York Central and Santa Fe roads have placed extensive orders for timber and ties. The Burlington has enquiries out for 1,200 box cars and 300 stock cars. These enquiries and orders bear out the general belief, that, on account of the extensive retrenchment practiced by the railroad companies during the past year, they will have to buy heavily to provide replacements and new rolling stock.

Retail dealers, most of whom have been holding their annual meetings recently, appear to have confidence in the trade outlook. This is based upon excellent crop prospects and the good financial situation of the farmers. Wholesalers report that the enquiries for stock and prices have increased and that the demand will probably become quite active as soon as the weather moderates, especially in connection with yellow pine lumber.

View of Mills in Sarnia.

# BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

## Ottawa Shows Considerable Improvement

Ottawa, February 10th (Special to the Canada Lumberman):—There has been considerable improvement in trade during the last two weeks in every direction. With prospects of an early spring there have come some fairly good orders from local sources. From Great Britain there have been several inquiries about different grades; also from the United States. Mr. Frederick Stobart, purchasing agent for the British War Office, stated when in Ottawa recently that he had placed large orders with Canadian firms for lumber to be used principally as railroad ties, bridge timbers and for other military purposes. Most of these orders, however, have been placed with British Columbia firms. As in other years, at this time, there is very little doing in the export trade and what business there is has not been encouraged by the recent German submarine raid in the Irish Sea, which caused Lloyd's to advance the insurance rate on Atlantic cargoes from $1.25 to $2.50 and $3.75.

Operations in the woods are proceeding apace under very good conditions. Recent heavy falls of snow and the severe weather have put the roads in excellent shape. Most of the log makers have returned to the towns and cities and in their place have gone loaders and teamsters.

The outlook for building in Ottawa for this year is, at present, not very encouraging, though just at present considerable lumber is being used in the preparation of buildings for military barracks. There are now over 1,000 recruits stationed in Ottawa and more will be mobilized here shortly. Last year the Public School Board spent nearly $300,000 on new buildings and repairs to buildings. This year the building committee is asking for about $12,000. Prices remain the same and are not likely to show any alteration for some time to come.

The command of the 38th Infantry Battalion, to be known as the Royal Ottawa Regiment, which will be a unit of the Third Canadian Contingent, has been given to Col. C. P. Edwards, of the firm of Watson & Todd, and a nephew of Senator W. C. Edwards.

## Quebec Manufacturers Expecting Improvement

Montreal, February 12th (Special to the Canada Lumberman): Trade at Montreal continues on the slow side. There is very little building in progress, and a revival in this respect is not looked for at least for another month or six weeks. Tenders are out for three or four fairly large jobs, which however, will not be commenced until the weather is more open. The permit figures for January continue to show declines. The value is given as $203,261, compared with $409,645 last year.

Although business with the United States is quiet, there are indications that it will shortly pick up.

Many manufacturers are satisfied with the general outlook for the current year, basing their optimistic views on the expectation of very large orders from the other side of the water.

The decision of the British War Office to alter specifications to allow of Canadian pine being used in substitution for Archangel red, should mean more business for this country. At present the position for exports generally is uncertain. Freight rates keep up, and the available tonnage is so limited that the steamship companies have had to refuse lumber for shipment to the United Kingdom. The prospects for spruce are good, but much will depend upon the course of freights. If they are easier, it is almost certain that the demand for Canadian lumber will be very active.

In the pulp and paper sections there is a more hopeful feeling, notwithstanding that in some grades of paper orders are light. A gradual improvement is confidently looked for. The pulp situation remains about the same so far as selling is concerned, ground wood being in only moderate request. Heavy stocks of sulphite from Europe have recently arrived at United States ports.

## The War's Effect Upon Glasgow Trade

Cant & Kemp, Glasgow, in their annual timber market report say:—The timber trade like all other trades at the commencement of the war was considerably disorganized. Difficulties without precedent were an every day occurrence. Some branches of the trade, notably spruce, developed a large demand through the curtailment of European importation. Prices rule high, and may even yet reach higher figures. Hardwoods have not, generally speaking, been in great demand owing to the cabinetmaking industry being badly hit. Owing, however, partly to the stoppage of consignments, but chiefly to the phenomenal rise in freights during the last two months, a considerable business has been done both for spot stocks and for shipment. If freights go higher still, or are even maintained at their present level, business in some directions will, we fear, be seriously restricted. A large part of the demand has been in connection with Government orders.

Shipbuilding on the Clyde has had an eventful time. During last year the output of new tonnage was very great. Nothing approaching this had ever been turned out in any previous year, and it was not expected that anything near its total would be launched during the year. New contracts were very scarce in the early months of the year, and the laying up of unprofitable tonnage was being discussed. The war, however, changed the whole aspect of affairs, and three of our largest shipbuilding establishments were immediately turned into Government dockyards for the time being. Further, when the war turned in favour of the Allies, a large number of contracts were placed for new steamers, and now the yards are all busy, and the main difficulty is getting sufficient men to do the work. The total vessels launched on the Clyde during the year number 307 measuring 460,258 tons, as against 370 vessels measuring 756,976 tons for 1913, being a decrease of 296,718 tons. Over Scotland there have been launched 454 vessels measuring 508,945, as against 520 vessels measuring 688,188 tons for 1913, being a decrease of 179,243 tons.

Quebec Yellow Pine Waney Boardwood.—The stock is much reduced from last year, due to a considerable portion being pressed for sale which obtained unsatisfactory prices. The stock is still sufficient to keep the market going for some time. Quotations may be given as from 3s. 6d. to 5s. 6d. per cu. ft.

Walnut Logs, etc.—The stock of logs is moderate, consisting largely of second class timber. The stock of planks and boards is small, while the enquiry is chiefly for first class parcels of wide average. Quotations are as follows, viz.:—Logs, 3s. 3s. to 6s. 6d. per c.ft. usual string measure. Lumber—Prime grade 5s. to 6s. 6d.; Medium grade, 3s. 6d. to 4s.; No. 2 Common, 2s. to 2s. 9d.,—all per cubic foot according to specification.

Quebec Red Pine.—The stock of logs is nil, while the stock of deals is moderate with limited enquiry.

Quebec Oak.—The stock is considerable and the demand very poor, any enquiries being for first class lots. Quotations are:—3s. to 4s. 6d. per cubic foot according to quality and specification.

Quebec Elm.—The stock is moderate with a fair demand. Prices are firm for first class parcels.

Ash.—The stock is small and all United States timber. Prices are firm and quotations may be given as 2s. 6d. to 3s. per cu. ft. according to quality and specification.

Birch.—The stock of logs is very much lower than at this time last year with a fair demand. The stock of planks and boards is considerably reduced with a moderate enquiry. Quotations are:—Logs, 1s. 10d. to 2s. 9.; Planks and boards, 1s. 6d. to 2s. 6d.,—all per cu. ft. according to quality and specification.

Quebec Yellow Pine Deals, etc.—The stock of all grades is light with a slow enquiry, the demand being chiefly for the lower qualities. First pine deals and sidings have only been occasionally enquired for. The same remarks apply to Californian pine sidings, sugar pine planks and Siberian pine, the prices of which are inclined to droop. Values of Canadian goods are firm, and may be quoted as follows, viz.—Firsts—Boards, 5s. 3d. to 6s.; Regulars, 4s. 10d. to 5s. 3d.; Undersized, 3s. 4d. to 3s. 9d. Seconds—Broads and Regulars, 3s. 4d. to 3s. 10d.; Undersized, 2s. 4d. to 2s. 9d. Thirds—Broads and Regulars, 2s. 2d. to 2s. 8d.; Undersized, 1s. 8d. to 1s. 10d. Fourths—Broads and Regulars, 1s. 8d. to 1s. 10d.; Undersized, 1s. 3d. to 1s. 5d. Good sidings, 3s. 6d. to 5s. 6d.,—all per cubic foot according to specification.

Quebec Spruce Deals.—The stock is considerable, with a strong demand. Quotations are high for reasons already stated.

Lower Port Pine and Spruce Deals.—The stock of spruce is fairly heavy. There is a good demand and high prices are being maintained. The stock of Riga is considerable, and good prices are the rule.

## United States View of the Trade Situation

The president of the Hardwood Manufacturers' Association of the United States, Mr. J. H. Himmelberger, in a letter to the members of the Association, calling their attention to the annual meeting, which was held on January 28th and 29th, referred in the following interesting manner to the business situation:—

"We have just entered upon a new year; a year we all earnestly hope will inaugurate that period of increased business we have been so eagerly looking forward to.

"But just what does 1915 hold in store for us?

"The new year is ushered in by unusual circumstances that make it unique—different from any in the recollection of the oldest lumberman. The European war is the great, uncertain element. That un-Christian catastrophe descended upon mankind just at a time when we were pushing our head out of the hole of commercial and financial depression.

"As far as lumber is concerned it struck the industry quick and hard. It shut off our export outlet for surplus stock, and threw back on to the domestic market millions of feet of lumber that was pushed for sale.

"But just as the war was a shock and a costly setback, the peace that is to follow will swing the pendulum the other way. Europe will buy our lumber for reconstruction; she must buy from us. We should be ready for this demand."

Lodgepole pine, one of the principal trees of the Rocky Mountains, makes good strong wrapping paper and pulp board.

# Getting Acquainted

Is somewhat of a problem, at times, occasionally decidedly unpleasant You have probably found it so in both your buying and selling experience.

Why take a chance of having your pride, feelings or temper ruffled—stick close to your old friends, not quite the excitement maybe, but there's that peace of mind, that satisfaction in knowing that they can be depended upon.

There is no more dependable place on earth to get your Dressed Spruce, than Fenderson's—the value is in it—beautifully dressed—excellent grade—bone dry—you can bank on its being good when you place the order.

If you would help your business grow, handle better stock than the other fellow, your customers talk it over, if pleased, they build your business—if not pleased, they tear it down. Be jealously careful of your strongest advertising medium.

## Remember

The most value for every dollar.

Each car chuck full of satisfaction.

Make that next car a Fenderson car.

You'll like it.

THEIR ORIGIN, VALUE AND USE—COMMENT AND VIEWS ON AN IMPORTANT BRANCH OF THE TRADE.

## The Merits of Austrian and British Oak

By Professor Percy Groom, M.A., D.Sc.

In a majority of cases, where oak is used in the woodwork of better-class buildings in England, architects specify that the oak shall be Austrian. Consequently, if there be available other kinds of oak equal in merit to, but cheaper in price than, Austrian oak, the custom of demanding Austrian oak in contracts involves an undue inflation in its price and waste of our national financial resources. Austrian oak is demanded where lasting decorative effect is the sole end to be attained. The question of the strength of the wood is therefore irrelevant, for the high price of Austrian oak at once excludes it from use for mere constructional purposes.

The kinds of oak timber regularly available in England and suitable for decorative woodwork are: (1) British; (2) American; (3) Russian; (4) Anstrian; (5) Japanese.

American oak, as a rival of Austrian, can be instantly dismissed. For, although some of it is very boldly figured by reason of its deep silver grain, yet the supplies reaching this country are so mixed and varied as regards tint and texture that it is not practicable to secure sufficient uniformity of appearance for better class work. Moreover, in these timbers, derived from several species of oak (Quercus alba, Q. rubra, Q. velutina, Q. patustris, and others), sap-wood is frequently included. American oak is therefore not an adequate substitute for Austrian, and is properly relegated to lower class woodwork.

In order to appreciate the relative merits of the four remaining kinds of available oak timbers, it is necessary to consider briefly their structure and the two modes of sawing them. The main mass of the wood is traversed at intervals by ribbon-like structures running across the grain and directed towards the actual centre of the trunk. When the trunk is cut down the middle, these radially arranged ribbon-like structures, or medullary rays, are visible as glistening bands constituting the so-called silver grain. It is not possible, however, to cut the cylindrical trunk into boards whose sides were all originally directed to the centre; the nearest practicable approximation has to be adopted. The result is that the middle boards show relatively long and deep, and therefore relatively bold silver grain; at increasing distances the boards on the two sides show shorter and often shallower silver grain. When two kinds of oak differ in the boldness of their figure, marginal boards of the bolder figured kind may be far inferior in silver grain to the more central boards of the other. Hence, although Austrian oak generally appears to be somewhat bolder figured than Russian and Japanese, yet its marginal boards may be inferior in figure or indistinguishable from more medium boards of the other two. In fact, if the boards be cut too far from the middle ones, they are very poor in figure and become almost indistinguishable from boards cut in the manner about to be described. Boards cut so as to show the silver grain are said to be "cut in the quarter," or "quartered," and constitute genuine "wainscot" oak. Boards cut in a direction at right angles to that in which quartered oak is are "bastard sawn"; they are dull, in so far as they show no silver grain, and are described as "plain oak."

Another character of wood must be mentioned before discussing the relative merits of the different oaks. When drying, including seasoning, wood shrinks least lengthwise, and in a transverse or cross direction it shrinks much less in a radial direction than in a direction of the annual rings. The result is that boards of quartered oak shrink less in width, and warp less than do bastard-sawn boards, and the nearer the quartered boards are to the middle one the more marked the lack of shrinking and warping. Hence, in comparing the shrinkage and warping of boards, comparison must be made between similarly cut boards; and, for instance, one must not condemn British oak because bastard-sawn boards tend to warp and consequently crack in drying more than do Austrian boards cut on the quarter.

Of Austrian oak the salient merits are that it is mild ,of even, open grain, easy to work, and obtainable in boards that are of considerable width, yet free from defects. The true wainscot wood of the best quality shows bold figuring due to deep silver grain, and is unsurpassed by others in this respect.

Straight-grained British oak is not only exceptionally strong and hard, but shows silver grain as handsome as that of Austrian oak. The fine decorative effect of such British oak is demonstrated not only in historic buildings, but also to an equal degree in modern woodwork, thus proving that the appropriate kind of wood is still obtainable. The conclusions concerning the decorative value of British oak will be given later, when other classes of the wood are considered.

In Russian oak, imported from Riga, Dantzic, Stettin, and Odessa, the silver grain is generally somewhat shallower and less bold than that of Austrian (though, as already pointed out, this holds good only for corresponding boards of the two opposed kinds). But inasmuch as some persons prefer the shallower silver grain, this cannot be counted wholly as a disadvantage. It should, however, be pointed out that the boards are so cut that the majority show no silver grain near one edge, which therefore must be cut off to secure a wholly figured panel. Or sometimes, in order to secure wider boards, the Russian log is cut in such a manner that all the resulting boards show nearer one edge a plain band of wood that is actually "bastard cut" and devoid of silver grain. But when Russian wainscot oak is cut to the best advantage it may, in situ, be indistinguishable from Austrian oak, or, if showing a difference from this, is regarded as superior or inferior according to the beholder's taste.

While British, Russian, and Austrian oak timbers owe their strong likeness to one another largely because they are derived from one and the same species or two very closely allied species (or co-species) of oak, Japanese oak as at present imported is obtained from at least two entirely different species. Despite this fact, Japanese oak timber shows so strong a likeness to the European oak timbers mentioned that in completed woodwork it may readily be mistaken for one of these. Derived from old forest trees, Japanese oak has straight, even grain, and narrow, very uniform annual rings, which nevertheless, in frequent contrast with narrow annual rings of European oaks) have a good percentage of wood-fibres that impart strength and hardness to the wood. Japanese oak certainly has great power of resisting shrinkage, warping and cracking, that are liable to occur in oak during seasoning and drying. For I have seen cases of woodwork in which it was exposed to alternate dryness and moisture, and also in which it was exposed to a severe test as regards dryness and heat (associated with a radiator very close to the wood in a draughty passage). The silver grain is, on the whole, a little less bold than that of Austrian oak, yet is sufficiently bold to cause the wood to yield handsome wainscot panels, practically indistinguishable in situ from Austrian oak panels.

As regards plain (bastard cut) straight-grained oak of all kinds under discussion) it is not possible by mere inspection to distinguish these from one another when in situ, though this is not true when the magnifying lens and microscope are used). It is now necessary to consider some special varieties of oak timber so far passed over.

Set in three classes by themselves are certain kinds of British oak.

In the first place, there is the highly decorative burrwood, which, however, is too scanty in quantity and too costly to be regarded as other than a furniture wood; it is therefore not a rival of Austrian oak.

Abundant, on the other hand, is a second type of British oak timber, which is obtained from trees grown in well-lighted situations, and has, in place of straight grain and even texture, twisted grain and varied texture (due especially to inequality in width of the annual rings). The cut wood owes its decorative and varied "figure" not merely to the depth and abundance of the silver grain, but also to the tortuous and obliquely cut grain. This oak wood, which can be obtained at a lower price than that of Austrian oak, I regard as the finest decorative oak of ordinary color that is procurable. Yet where the artistic scheme demands greater uniformity or austerity of design a straight-grained oak will be selected.

Absolutely without rival for richness of color is a third kind of British oak—the famous British "red" or "brown" oak—which is unobtainable from any other country. This unique wood, I understand, can be obtained at present at a price scarcely exceeding that of Austrian oak, which cannot compare with it as regards color.

In regard to British oak, several circumstances militate against its use. They are:

(1) The supply is irregular and uncertain. This fact, in turn, reacts on the demand and on the economic policy of the timber merchants in regard to purchase and storage for seasoning. I understand that there is no shortage of large-sized oak trees in this country, and that if the demand were more continuous there would be a satisfactory supply.

(2) A considerable amount of British oak timber has twisted grain and knots, and architects frequently refuse to accept such wood for decorative purposes, regardless of its most attractive appearance.

(3) Partly connected with this last is the stigma under which British oak rests in regard to its liability to warp, crack, and shake. It is true that wood with twisted or irregular grain is, during seasoning, more liable to crack than is straight-grained wood, but with careful seasoning this tendency can be guarded against. Moreover,

## Dominion Mahogany & Veneer Company

**Montreal West, P.Q.**

when the wood is once fully seasoned for indoor use, such oak in internal woodwork will endure indefinitely without shrinking appreciably or cracking. That this is the case is demonstrated by the superb modern wood-panelling in the Court of Criminal Appeal. But oak wood of this kind is not so well suited to alternate exposure to moisture and draught.

(4) British oak is apt to be more wasteful when cut up, and is harder to work than is the case with the other oaks mentioned. Its wastefulness will doubtless influence the price paid, but will not otherwise affect the consumer. And, as regards difficulty in working, practical men state that this is largely due to lack of practice on the part of workmen, and that country joiners, who are more accustomed to the use of British oak, readily become adepts in dealing with it.

### Conclusions

The following are the conclusions to be drawn from the facts and considerations already recounted as to the relative merits of the different kinds of oak available in England and suitable for the same and sole purpose as Austrian oak—namely, for decorative woodwork:—

(1) From the point of view of color, the supreme place is taken by British "red" or "brown" oak, a unique wood which at present somewhat exceeds Austrian oak in price.

(2) Of oak woods normal in color, the one giving the highest and most varied decorative effect is that abundant form of British oak which has twisted, irregular grain, including knots.

(3) Where a more uniform scheme of decoration is required, but the satiny surface of "silver grain" is desired, the choice can be made among five kinds of straight-grained true (figured) "wainscot" oak. Of these American oak is excluded from better-class work by reason of its mixed nature and other structural defects. Among the remaining four kinds—British, Russian, Japanese, and Austrian—I can make no distinction. For, although each of these is apt to possess certain characteristics of its own, yet many specimens of all four kinds can be found presenting such similarities to each other as to render it difficult or impossible to recognize their precise origin. In such cases the magnifying lens and microscope in the hand of an expert alone can shed critical light on the identity of the specimens.

When a still more uniform, and cheaper, scheme of decoration is required, there is available the straight-grained, plain, or "bastard-sawn," wood (not showing the glistening silver grain) of the four last-named kinds of oaks. Again, there is no reason, other than economic, to give the preference to any of these for decorative purposes.

This double conclusion to make no distinction as regards suitability for indoor woodwork among the three European and Japanese oaks is fortified by the fact that even when Austrian oak is specified in contracts, the wood actually used by the builder is very often wholly or mainly not Anstrian. This fact alone proves that in Great Britain there are other oak timbers cheaper than Austrian oak, yet sufficiently resembling it to satisfy or deceive the architect.

As regards durability in relation to decay, there is no doubt that all four kinds of oak under discussion would equally be attacked by the worst dry-rot fungus (Merulius lacrymans). Nor is there any evidence available that there is any difference in their powers of resisting "worm-hole" attack. The silver-grain effects are durable in all four.

To conclude. From the point of view of durable decorative quality, Austrian oak does not deserve its present superior reputation and preferential treatment. From an economic standpoint the cheaper British, Russian, and Japanese take precedence. While on political and economic grounds Austrian oak should at present be excluded, and first choice given to British, while of the two remaining kinds, which are products of our allies, Russia and Japan, preference might be accorded to the latter, not alone because Japanese oak is cheaper, but also because the merits of the wood as now imported need wider advertisement. The present position of this country as regards the supply of timber emphasizes the fact that, through our continued neglect of afforestation, we have not only to import oak that could profitably be grown on better class soils, such as those of English estates, but we have also to import fir wood at an annual cost of between twenty and twenty-five millions, although such wood could be grown on inferior soil too poor for profitable agriculture. Much of the decorative and furniture wood purchased from foreign countries could be profitably replaced by less-known woods now growing in the Colonies and self-governing countries of our Empire. Such a substitution would be feasible were the scheme aided by true enterprise on the part of the governments concerned, who would favor the substitution, and proper advertisement of the qualities of the woods concerned.

---

The heavy snow falls which occurred early in February were very general throughout Ontario, Quebec and the Maritime provinces and reports from several quarters indicate that the cold weather and snow have combined to produce greatly improved logging conditions.

## Some Problems in Kiln Drying Lumber

By Malcolm E. Miller*

The artificial drying of lumber has been a subject of investigation for many years, dating back to the old days when boards were placed on end, corn shock fashion, over a fire built in a hole in the ground. Accurate and satisfactory results were not possible with the haphazard methods of the past. Success in the matter of kiln drying has been attained only within the last five or six years, and it came through a more thorough application of practical chemistry and physics to kiln construction, and a fuller appreciation of the three absolutely essential features of scientific lumber drying: namely, control of moisture, control of heat and control of air circulation.

Following the primitive corn shock method mentioned above, came the bake oven kiln of which there were several varieties but all working on the principle that heat brought into the kiln by means of steam in radiators or coils of pipe would vaporize the moisture in the boards and thus produce the desired results. There was practically no control of drying conditions in this type of kiln. A thermometer indicated the temperature only and, if it were thought too high, the steam was turned off or reduced but there was no regulation of atmospheric conditions. The heat was usually dry and the lumber went through somewhat the same process as a fowl which is put into a hot oven for roasting. It was seared over with a shell of case-hardened crust which absolutely prevented the centre of the board from being appreciably affected by the heat and the centre moisture was retained intact because cellular expansion had been rendered impossible. The result was checking, honey-combing, warping and a ruined board.

The blower kiln was an unsuccessful attempt to eliminate the difficulties of the bake oven method. A blower forced the hot air through the kiln at high velocity and managed to consume an immense amount of fuel without a proportionate increase in efficiency.

Finally came the discovery that moisture was what was needed, and the "moist air" kiln soon covered a multitude of experiments from boiling lumber in vats to the almost infinitesimal live steam spray. With the "moist air" kiln came a decided improvement and a lessening of the case hardening, warping and twisting evils, but still there was lacking the important element of control; control of humidity, temperature and ventilation.

Humidity, temperature and circulation must be controlled in such a manner as to bring about cell expansion and vaporization of the moisture from within out. When the proper degree of dryness has been reached the process must stop and the condition of all the lumber dried for a certain line of work must be uniform.

For example: In the manufacture of maple flooring it is our purpose to have the moisture content of our product just as nearly as possible in line with the atmospheric conditions it will meet in average use. The greater part of our flooring stock is ripped from wide boards after they have passed through the kiln and it is obvious that the stock must be evenly dried. If the centre of the board is not dry and the tongue happens to come on the edge of a flooring strip ripped from the centre the tongue will shrink and the result will be a rattle box joint, uneven matching and a bad floor. On the other hand, if the tongue is made on the edge of stock that is too dry, it will swell and the joint will not come together.

Our kilns are the box type in construction and the whole process of drying is accomplished in one compartment without removing the stock until it is right. The lumber is first enveloped in a hot fog which is forced into the very centre of the wood. At the proper stage of saturation the temperature is increased and the humidity decreased in the proportion necessary, as established after elaborate experiment, to bring about the correct degree of moisture content requisite for our needs and there is no guess-work about it. Delicately constructed instruments, designed especially for this purpose, enable us to ascertain during the process of drying, the exact moisture content of the stock. The lumber is allowed to cool partially in the kiln and is then removed to the annealing shed where it is kept, under proper atmospheric conditions, ready for use.

## Texas Wants B. C. Shingles

J. S. Daugherty, of Houston, Texas, has written to the American Consulate-General at Vancouver, urging the advantages of the Houston canal in the shipment of shingles to interior points and to Houston. He points out that cars come loaded to the Gulf coast of Texas, and return cargoes are needed. Shingles, he thinks, would find a ready market. Mr. Daugherty even suggests the possibility of a trade in logs, but this would hardly materialize. In the first place, logs, generally speaking, cannot be exported from British Columbia, except under conditions such as exist at present, and besides if the market is good at all they can be sent to Washington State points. It will be some time before logs are rafted down the coast and transshipped, or even sent by big liners as cargo to Texas State points.

# Forest Protection Work Continues

## Canadian Forestry Association Reports Progress in Spite of War—Officers Elected for Present Year

The annual meeting of the Canadian Forestry Association was held at Ottawa recently. The report of the directors for the year stated that the Association's work had proceeded as steadily as possible and that when the war ceased, the Association hoped to turn public attention once more to the important questions involved in the protection of the forests.

Throughout Canada the report stated that there had been continued progress in forest conservation in spite of the war. The season had been a bad one all over Canada for forest fires, and heavy losses had been reported at different points. Drought conditions had prevailed practically throughout Canada from the western section of Quebec to the Pacific Coast, until the arrival of snow. Never before, however, had there been so much determined effort put forth to prevent and suppress fires. There had been a notable improvement in the fire protection along railway lines.

Considerable additions had been made to the Dominion Forest Reserves in the western provinces, chiefly in Saskatchewan, where 7,879 square miles of land unsuited for farming had been added to the already existing reserves. The total areas now in forest reserves under the Dominion Forestry Branch are: Alberta, 12,462,720 acres; Saskatchewan, 6,195,200 acres; Manitoba, 2,606,080 acres; and British Columbia, 1,759,360 acres, a total of 23,024,640 acres of reserves under the Dominion Government.

There have been some increases in the forest reserves in the different provinces, which according to latest figures obtainable now stand as follows: Quebec, 107,997,513 acres; Ontario, 14,430,720 acres, and in British Columbia under provincial jurisdiction, 2,474,240 acres. In the last named province, in addition to the above reserves, all lands west of the Cascades bearing more than 8,000 feet board measure per acre and all lands east of the Cascades bearing over 5,000 feet per acre of merchantable timber are reserved from entry.

The report called attention to the fact that, in spite of the war, the three Canadian Forestry schools now have about the same number of students in attendance as last year.

In conclusion the report said:—So long as war lasts, it will probably be impossible for the Association to inaugurate an aggressive campaign, but when war ceases two prime duties seem before it, one to recommence the work in Nova Scotia in order to assist in the solution of the peculiar problems of that province, and the other to forward the movement for a Dominion-wide convention to take stock of the whole forest situation and to see what progress has been made since the National Forestry Congress of 1906.

A resolution was carried to the effect that the Association should aurge strongly upon the government to subject the National Transcontinental and Intercolonial Railways to the same rules and regulations in regard to fire patrols and fire protection as are now imposed on all other roads by the Railway Commission. The Department was instructed to appoint a special committee to draw the attention of the government to this matter.

Officers for the year were elected as follows:—Patron, H. R. H. the Governor-General; Hon. President, Rt. Hon. Sir Robert L. Borden; Hon. Past President, Rr. Hon. Sir Wilfrid Laurier; President, F. C. Whitman, Annapolis Royal, N.S.; Vice-president, J. B. Miller, Toronto; Secretary, James Lawler; Treasurer, Miss M. Robinson. Board of Directors: Wm. Little, Hiram Robinson, Aubrey White, E. Stewart, W. B. Snowball, Thomas Southworth, Hon. W. C. Edwards, Geo. Y. Chown, John Hendry, Hon. W. Charlton, Hon. W. J. Roche, Hon. Geo. H. Perley, Hon. Sydney Fisher, R. H. Campbell, Wm. Power, M.P., Gordon C. Edwards, Dr. B. E. Fernow, Ellwood Wilson, Senator Bostock, G. C. Piche, Alex. MacLaurin, Mgr. Roy, A. P. Stevenson, Wm. Pearce, C. E. E. Ussher, Denis Murphy, Clyde Leavitt, Jackson Booth, Wm. Price, J. W. Harkom, A. S. Goodeve, W. C. J. Hall, J. S. Dennis, J. B. White, E. J. Zavitz, Geo. Chahoon, Jr., R. D. Prettie, Hon. N. Curry, A. C. Flumerfelt, H. R. MacMillan.

The executive committee reported that the secretary, Mr. James Lawler, Ottawa, had tendered his resignation in order to take up other work, but had agreed to continue in office until a successor could be appointed. The executive committee had appointed a special committee to appoint a successor.

---

### United States Hardwood Exports

The National Lumber Exporters' Association of the United States in their report of lumber cut and shipped during 1914 and during 1913 present the following comparisons: Hardwood, cut, 1914, 700,000,000 feet; shipments, 523,000,000 feet. Cut, 1913, 675,700,000 feet; shipments, 614,400,000 feet. Soft woods, cut, 1914, 9,336,100,000 feet; shipments, 164,400,000 feet. Soft woods, cut, 1914, 9,336,100,000 feet; shipments, 9,089,700,000 feet. Cut, 1913, 9,947,500,000 feet; shipments, 9,678,300,000 feet.

---

R. H. Campbell, director of forestry, reports that during the past year there were 1,406 forest fires in the different parts of Canada, mostly in the west, and that they caused the destruction of 438,567 acres of forest and 350,000,000 feet board measure of merchantable timber. The spring and summer of 1914 were exceptionally dry. During the year 1910, which was also a very dry year, there were 1,227 forest fires, which destroyed 345,660 acres of trees and 185,350,000 feet of merchantable timber. Mr. Campbell's report states that most of the fires are caused by careless settlers, railway companies and thoughtless campers.

---

A case before the Supreme Court in Vancouver, in which judgment was reserved, was that of the Nicola Valley Lumber Company vs. H. C. Meeker, of the Nicola, but formerly a lumberman in Connecticut. Mr. Meeker bought eight limits and a mill-site from the plaintiffs, and paid $10,000 down. They are suing for $15,000, which was due last June. On the other hand, the defendant advanced a counterclaim of $35,000.

---

The appeal in the Deadman's Island case recently came before the Supreme Court at Ottawa, when judgment was reserved. This case has been before the courts for 16 years, and arose out of the granting of a lease to Deadman's Island, in Vancouver harbor, to Theodore Ludgate and associates, of Seattle, who were known as the Vancouver Lumber Company.

---

Shipments of pulpwood from the line of the Temiskaming and Northern Ontario Railway are reported as being very heavy at present. During one day in January the Grand Trunk Railway shipped ten trains of pulpwood from points south of North Bay. The activity is the result of the great demand for pulpwood for export to the United States and for the manufacture of paper in Canada.

---

The Dominion Commission of Conservation in a recent issue of its journal entitled "Conservation" advocates the setting aside of the Lake of the Woods district as a forest reserve with the object of protecting and renewing the timber growth and conserving the waters for hydro-electric development.

# "Hipcoscope" Lumberman's Electric Lantern

***Always Ready*** ***Can't Start a Fire*** ***Cheaper to use Than Oil***

This new light is built on the principle of the searchlight (see illustration) and will throw a strong light 300 feet. It is operated on two No. 6 dry cells which may be secured anywhere in Canada for twenty-five cents each.

The "Hipcoscope" is the ideal light for your night watchman in the lumber yard or mill—he can search every alley and be sure no one is lurking in the dark. The "Hipcoscope" costs about quarter cent per hour and gives 200 hours light for fifty cents.

It is impossible for the "Hipcoscope" to start a fire no matter what you do to it. Used with the "Hardinge" Portable Watchman's Clock your plant and yard are practically safe from fire or theft.

Owing to weight it does not pay to ship batteries. Delivered free without batteries, for $4.50 anywhere in Canada.

# ONTARIO
## Canada's Banner Province

Ontario's timber production last year valued at $26,774,937 or 40% of Canada's total output.

Pine production, 905,442,000 ft. B.M.
Pulpwood, 246,282 cords.
Railway Ties, 5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

# EDGINGS

## Ontario

The Northern Veneer Company, Depot Street, Grimsby, Ont., have awarded a contract for the erection of a basket factory.

The firm of Wise, Gray & Company, wholesale lumber dealers, Hamilton, Ont., have been dissolved and is succeeded by The Wise Lumber Company.

## Eastern Canada

N. Achim & Company have been registered to carry on a coal and lumber business at St. Lambert, P.Q.

The St. Simeon Lumber Company, Limited, have secured letters patent for increasing their capital stock from $290,000 to $500,000.

A report from St. John, N.B., states that Mr. James S. Gregory has purchased the Hilyard mill property on the Straight Shore, the price being in the neighborhood of $75,000. The property includes about 330,000 square feet of land, with saw and shingle mills, docks, slips, etc. Mr. Gregory has not yet announced his intentions in connection with the property.

By order of the Supreme Court of Ontario, Fraser Brothers, of Montreal, recently offered for sale by public auction, timber lands, limits and mills, the property of the Dominion Lumber Company, Limited, a winding-up order having been made in June last. The property comprised 1,000 acres of timber lands in the seigniory of St. Anne de Monts, Gaspe, P.Q., together with a lumber and shingle mill having a capacity of 25,000 feet of lumber and 125,000 to 150,000 pieces of shingles every ten hours; dwellings, store-houses, repair shops, etc.; 289 square miles of timber limits held under Government license, estimated to contain over 350 million feet of saw logs, principally fir, spruce and cedar, and 595,000 cords of spool and pulp wood; also logs in the river estimated at 1,000,000 feet board measure. There are also near La Grande Vallee des Monts, 54 square miles of timber lands and 100 square miles of licensed timber limits, estimated to contain 100 million feet of saw logs and 245,000 cords of pulp and spool wood, together with a new saw mill fully equipped and having a capacity of 50,000 to 75,000 feet of lumber every ten hours, and a mill for sawing shingles and railway ties, with a capacity of 125,000 to 150,000 pieces of shingles every ten hours; dwellings, store-houses, bidding commenced at $75,000 and advanced by $5,000 to $100,000. Mr. Vincent J. Hughes, of Montreal, then offered $101,000, at which price he was declared the purchaser.

## Western Canada

A small shingle mill has been started at Christina Lake, near Grand Forks, by Charles Sanders.

About four miles from Port Alberni the Kitsuckus Lumber & Shingle Company has started a plant with a daily cut of 15,000 feet. It will also put in one shingle machine.

The Mackie Mill & Mercantile Company, which has a plant at Gettysburg, Wash., has leased property for a site for a shingle mill on the south side of the Fraser, opposite New Westminster, B.C. Initial capacity will be 200,000 daily.

J. S. Deschamps, who has just completed a mill near Nelson, is busy with another plant south of the city, on the railway line to Rossland. It will cut 20,000 feet daily. Mr. Deschamps is a pioneer in the Kootenay, and for twenty years operated in the sawmill business at Rossland.

Hindus of New Westminster have organized a company with a capitalization of $250,000 to import hardwoods from India for use in British Columbia. Three of the principals have left for San Francisco to purchase the mill machinery for India. The wood will be exported in the rough.

Lumbermen in British Columbia will make a bid for business offering in Great Britain and France in the way of ties and pit props. Great numbers are needed, and it should be that millmen here can meet the price at which these items have been obtained from Norway and Sweden. The suggestion has been made from Ottawa that representatives be sent to London without delay.

A report from Vancouver, B.C., states that a Vancouver firm has recently received an order for 160,000 creosoted railway ties, from the Bengal & Northwestern Railway Company of India. The specification calls for the best quality of seasoned Douglas fir to be treated with twelve pounds of creosote per cubic foot, under specified temperature and pressure conditions. If these ties prove satisfactory it is probable that other large orders will follow.

The B. C. Sulphite Fibre Company, one of the very busy plants of the province, has bought 200,000,000 feet of hemlock and spruce timber from the Government. This timber is located at different points on the lower mainland coast. For stumpage alone the total estimated revenue to the province from these sales is $88,869, while a ground rent will be paid of $2,000 a year.

The company has its plant at Mill Bay, at the head of Howe Sound, and with about 400 men operates day and night. The activity of this mill and the Powell River Company has created a demand for hemlock.

The Canadian Trading Company, Limited, has been organized, with offices in the Winch Building, Vancouver, and in the L. C. Smith Building, Seattle, Wash. The president of the company is Walter R. Dockrill, of Vancouver, who has been manager of the Empire Stevedoring & Contracting Company, Limited. Mr. Dockrill is a son-in-law of E. J. Palmer, manager of the Victoria Lumber & Manufacturing Company, of Chemainus, B.C. One of the interesting features of this new company is the fact that it proposes among other things to develop a demand for fir lumber in Siberia, a field that has not been touched heretofore by Coast lumber exporters. Mr. Dockrill left for Vladivostok on the Russian Volunteer liner Tambov. He will establish an office in Vladivostok. Mr. Dockrill plans to remain in the Far East for five or six months, personally developing business. Mr. C. M. Pettibone, formerly Puget Sound manager for W. R. Grace & Company, is vice-president of the company. The company will engage in the shipping and commission business, specializing largely in the foreign lumber trade.

## Liverpool Trade Encouraging

Smith & Tyrer, Limited, Liverpool, Eng., in their report under date of December 31st say: The end of the year finds us involved in the greatest war the world has ever known. The commerce of the country has borne, and continues to bear, this unprecedented burden with an unexpected absence of serious embarrassment. It is to be hoped that the resources of the country will enable us to cope with the difficulties before us, with a minimum of interference affecting the interests of our friends in neutral countries. Pitch pine for forward business has been difficult owing to the want of space, steam tonnage being practically absent from the market and chartering confined to occasional sailing ships. Hewn timber is sufficient for requirements. Sawn timber has been in better demand and prices have materially advanced, but stocks still continue ample. Prime lumber is asked for in small lines and there has been an active enquiry for lower grades. U. S. A. hardwoods have developed more activity and prices have advanced in sympathy with freights. Spruce deals have continued the upward march in prices, and probably even higher figures may be realized. The demand comes chiefly for Government requirements. The import has been light and stocks are now much depleted. Birch.—There has been more enquiry both for logs and planks. Hemlock has been imported more freely and has come to an active market, largely owing to the position of spruce. Pine.—There has been a good demand for the lower qualities. Pacific Coast wood.—A considerable enquiry has shown itself for Oregon pine and spruce, and now that the Panama route is opened, this trade should develop.

The price of spruce lumber in New Brunswick has not been so high for more than half a century as it is at present. The chief drawback to business is the difficulty of getting tonnage to carry the available lumber to the old country markets. Freights are very high, and it is almost impossible to get steamers, while the number of sailing craft available is very limited. January in the southern part of New Brunswick was the mildest for many years. One heavy rain storm carried the ice out of some of the streams, and for two weeks operations of the lumbermen were greatly hampered by lack of snow The conditions have, however, greatly improved during the last two weeks. All reports from the woods confirm the estimates of a considerably larger cut of logs than that of last winter, and a prosperous year for New Brunswick lumbermen appears to be assured.

Mr. W. G. McIntosh has recently been appointed sales-engineer for Toronto by the Herbert Morris Crane & Hoist Company, Limited, well-known makers of lifting and shifting machinery. Mr. McIntosh graduated from the School of Practical Science in 1909, obtaining an honor degree in mechanical engineering. With the Otis-Fensom Elevator Company, the Toronto Power Company, the Canada Foundry Company, and the Dominion Bridge Company Mr. McIntosh obtained a very varied experience of shop work, drawing office and field erection which should stand him in excellent stead in his new position.

Recent sales by the government totalling 126,000,000 feet of sawtimber in the Olympic national forest, in western Washington, mark the opening of this hitherto inaccessible storehouse of timber, estimated to contain a stand of 33 billion board feet.

The Forest Service of the United States is co-operating with 54 railroads, mining companies, pole companies, and cities in making tests of wooden ties, timbers, poles, piling, and paving blocks which have been given preservative treatments.

The death took place suddenly of Robert Babcock, a timber broker of Vancouver. He died presumably from heart failure on the street near his house.

# The Steam Tension Band Mill

It is called the steam tension mill because the tension is maintained by steam—the most sensitive form of tensioning which has been devised.

The result of this is a great saving in saws—**several users of the machine have run through an entire season without cracking a single saw.**

But in addition to raising and lowering the top wheel by steam, there is a separate cylinder for operating the top guide, and these two cylinders make ours an entirely steam-operated mill, and, therefore, exceptionally fast.

It is made with 8 ft., 9 ft. and 10 ft. wheels, and will stand thorough investigation.

Write for bulletin and list of users.

**Sturtevant**
(REG. CAN. PAT. OFF.)

**Mechanical Draft in a Lumber Mill**

**Supplies draft for burning mill waste and eliminates sparks and cinders.**

The above System in a Western Lumber Mill handles the gases from boilers aggregating 2000 horse-power. The absence of sparks and cinders means less fire risk, decreased insurance and no discolored lumber. The additional profits due to clean lumber are worth having.

Write us for details of our systems and mention this paper.

**B. F. Sturtevant Co. of Canada, Limited**
GALT, ONTARIO,

**BOLINDERS'**

**Saw Mill and Woodworking Machinery**

If You Want Real Service Use

# Dixon's Silica-Graphite Paint

It will give you more real protection per dollar spent than any paint you can buy. That is why Dixons—even at a higher price—is the least expensive paint you can use. The price you pay for Dixon's is a price paid for dependable protection against the things that destroy your exposed metal surfaces. Send for "Protective Paint" Booklet No. 238—B.

## "Wilson Bros." Hardwood Flooring

**is the Flooring that is manufactured expressly to supply the demand for the best. It is made by modern machinery from carefully selected stock, and every precaution is taken throughout our entire system to make it fulfil the requirements in every particular. Write us for prices.**

**Wilson Bros., Limited - Collingwood, Ont.**

# A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

***Send for further particulars and prices.***

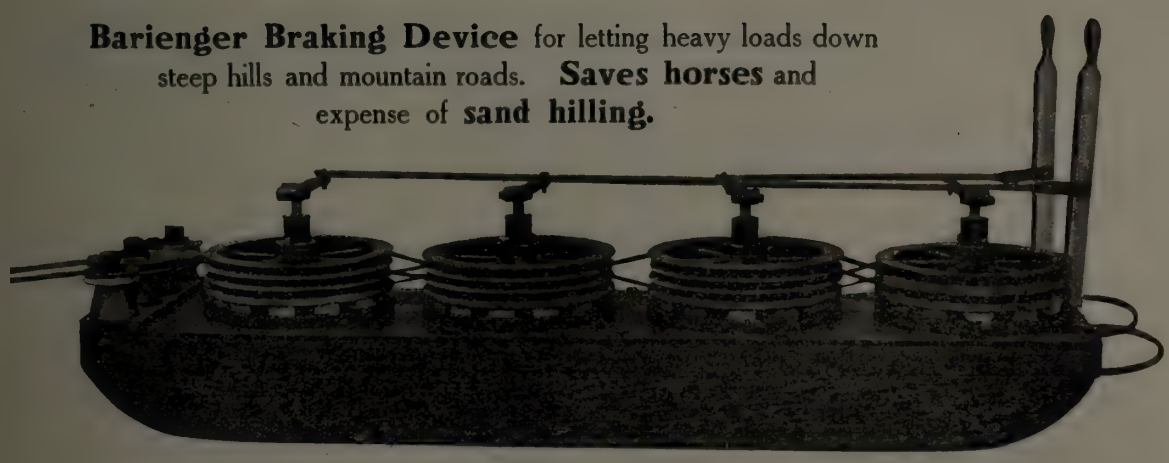
GOODHUE BELTS

J.L. GOODHUE & CO. Limited.

DANVILLE — QUEBEC.

# You Need a Brake This Season

**Barienger Braking Device** for letting heavy loads down steep hills and mountain roads. **Saves horses** and expense of **sand hilling.**



Now is the time to consider the use of this brake for another season before hauling roads are planned and built. By using this brake lumbermen are able to work much steeper roads, and in consequence, shorter roads and there is a considerable saving in the cost of building roads.

# Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

# Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

**W. W. Cory,**

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

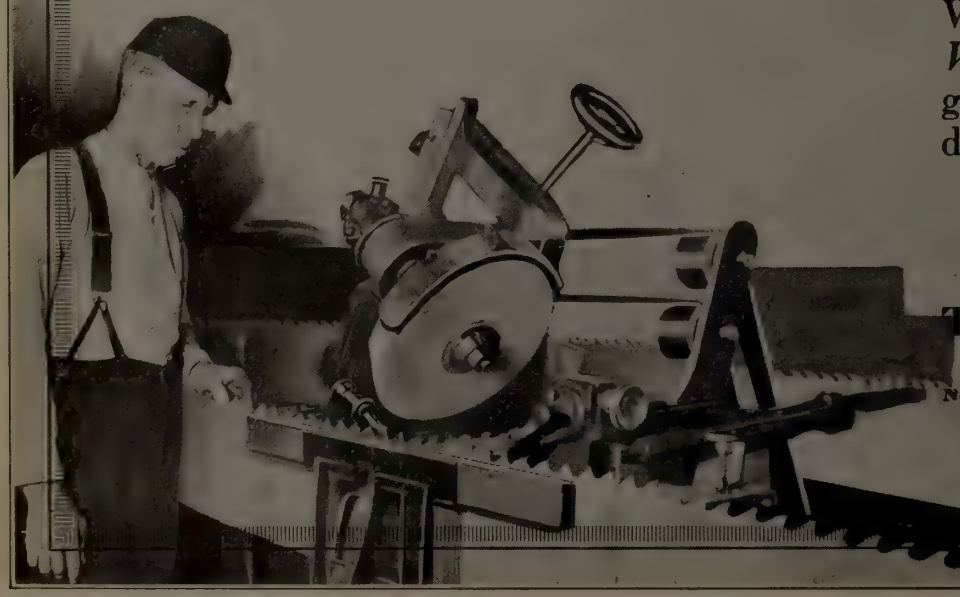
# —And Much Depends Upon the Wheel



Every saw filer knows that his Saw Gumming Wheel must be right—that it must cut clean, quick and positively cool without case hardening the saw or drawing the temper. That it must hold its shape and show long life.

**Aloxite Saw Gumming Wheels**

Will always prove to be *the Right Wheels in the Right Place*—right grit, grade and shape—and they show wonderful abililty to stand up to the work.

*The Proof is in a Trial Wheel*

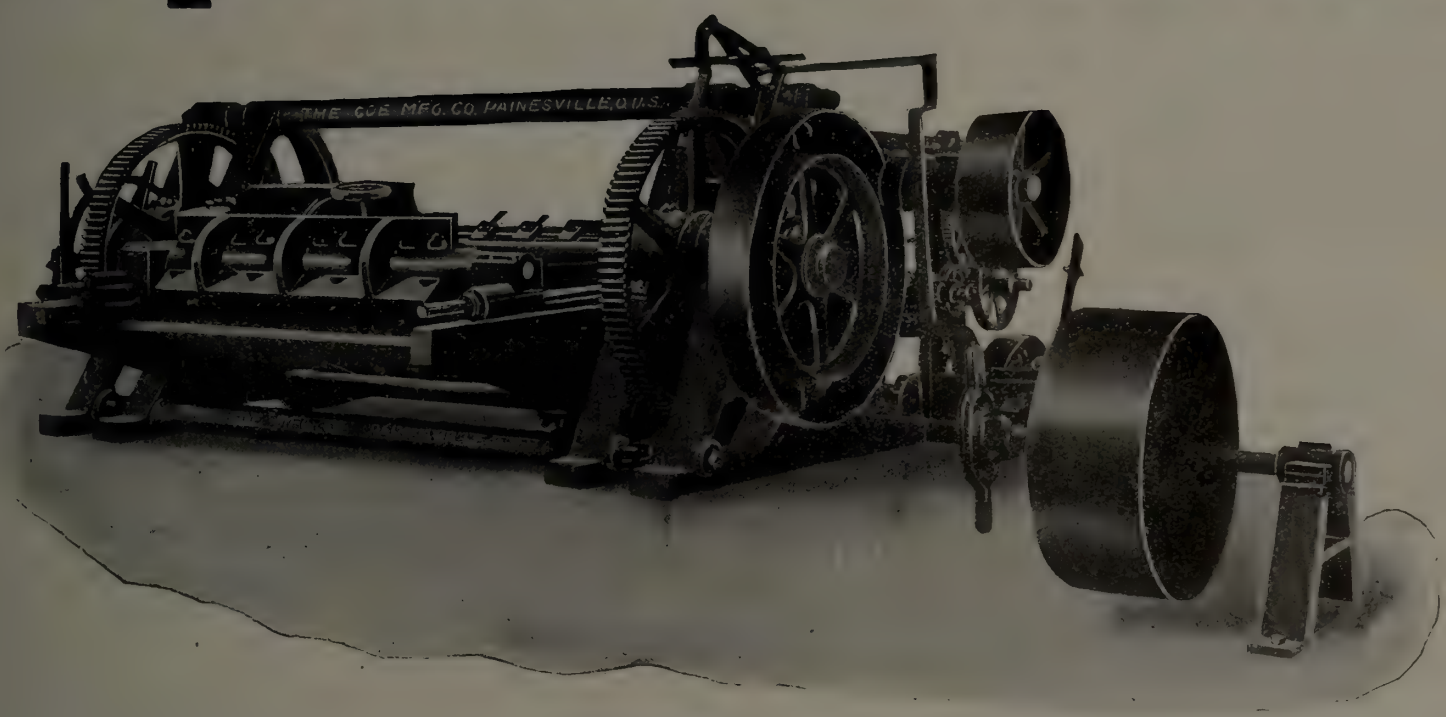
Veneer Machinery

# Rotary Cutter with Impression Roller



Where there is use for a large quantity of the same dimension stock, a Coe Rotary Veneer Cutter style "I" fitted with spur knives and back impression roll, carrying two, three or four knives, will deliver material direct from the log—cut to size—right in length, breadth and thickness.

In an ordinary day of 10 hours this machine will cut anywhere from 75,000 to 100,000 surface feet of case, crate, package or box stock—capacity enough to work up profits out of any timber fit for Veneer Stock. We add to range by supplying scarfing knives for can jackets, hoops, etc.

We handle the machinery end of the Veneer making proposition from beginning to end, furnish you plans and complete equipment and can do it in short notice.

*Established 1850*

***The oldest and largest manufacturers of complete veneer equipment in the world.***

# The Connecting Link

Way back in 1880 the **Wanted and For Sale** columns of the Canada Lumberman and Woodworker were used extensively by the lumbermen of Canada for the purchase and sale of timber, lumber and machinery.

Time has but served to enhance the value of this medium, until to-day the **Wanted and For Sale Department** of the Canada Lumberman has become a national market.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide field, the percentage of waste circulation for advertisers has been reduced to a minimum.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

**Canada Lumberman & Wood Worker**

"Made in Canada"

# "AMPHIBIA"

## Waterproof Leather Belting

# Hugs The Pulley

Running your plant with slipping belts is like running your auto with a leaking gasoline tank—you are losing costly power.

Particularly in a saw or planing mill the conditions under which a belt has to run are severe. "AMPHIBIA" waterproof leather belting is made to stand up under these extreme conditions. "AMPHIBIA" belting hugs the pulleys, prevents slipping and transmits a maximum amount of power to your machines.

"AMPHIBIA" belting costs a little more to buy than ordinary leather belting because it costs more to make—there is more in it. Considering that belting is to handle the most costly thing in your mill-power—you should take every precaution to use the best—"AMPHIBIA".

"Leather like gold has no substitute."

## To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

# Loans on Timber Lands

## For Long Periods of Time in Amounts from $25,000 and up

We have been in the lumber business for over half a century.

We now control and operate a number of mills. We also loan money to lumbermen.

It will be to your advantage to deal with practical men who know the requirements of the lumber trade all over Canada.

Our business is to know the wants of the lumbermen and to meet them.

# WHY? Because the Dealer Knows and His Customers are Informed

An eastern wholesale lumber dealer very frankly and strongly recognizes and emphasizes the fact that the retail lumberman knows good lumber and prefers to sell that kind. His statements command a respectful hearing by all interested in the sale of forest products, for he has learned that **the dealer is acquainted with the merits of Arkansas Soft Pine. He says:**

> We are losing orders from good customers of ours because we are unable to supply well manufactured, high grade Arkansas Soft Pine. We cover New York State, Pennsylvania and New Jersey with salaried salesmen and have always made a specialty of ———— pine, but the **dealers are leaning more toward Arkansas Stock each month.**

Not only are **dealers leaning toward Arkansas Soft Pine** but they are **leaning on it** and **relying on it to keep trade** where it belongs—**strictly at home.**

No other wood will take the place of Arkansas Soft Pine, the Standard Soft Wood trim for interior and exterior use. It makes friends and stimulates interest in the use of wood.

**That is the kind of lumber it pays to sell.**
**The dealer is not required to "keep" it.**

# Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the townships of Burpee, Falconbridge and Street for small mills.

**We have the following Sawmill Machinery for sale:**

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 8-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

## FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

# The Connecting Link

Way back in 1880 the **Wanted and For Sale** columns of the Canada Lumberman and Woodworker were used extensively by the lumbermen of Canada for the purchase and sale of timber, lumber and machinery.

Time has but served to enhance the value of this medium, until to-day the **Wanted and For Sale Department** of the Canada Lumberman has become a national market.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide field, the percentage of waste circulation for advertisers has been reduced to a minimum.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 35 Toronto, March 1, 1915 No. 5

## The Effect of the Duty on Lumber

After the lumbermen of Canada for many years had tried in vain to induce the Dominion Government to place a duty upon lumber entering Canada, so as to make their business reasonably profitable, the necessities of war have suddenly brought about a state of affairs which has induced the Government to include a duty upon rough lumber and an increased duty upon finished lumber, in its measures for raising greater revenue to meet the extraordinary expenses resulting from our military operations. Briefly, the change amounts to a duty of 7½ per cent. upon rough lumber and an added duty of 7½ per cent. on finished lumber, making the latter 32½ per cent. instead of 25 per cent. Formerly the rough lumber was entering Canada free of duty and the finished lumber paid a duty of 25 per cent.

The duty upon lumber is only one feature in connection with the tariff changes which the Government has made. A general increase of 7½ per cent. has been made pretty nearly all along the line, which the Government estimates will be sufficient to meet the necessities of the situation. As to the revenue producing character of the duty upon lumber, there is a rather general feeling among lumbermen that the change will not be very effective, but as a measure of relief to the lumbering industry in Canada, the new duty will be of the utmost importance and will unquestionably place the industry in such an improved condition as to make the renewed prosperity of the lumberman an important factor, in helping to bring about general prosperity throughout Canada. As a protective measure, the new duty upon lumber is of chief importance.

For many years the lumber manufacturers of Canada have seen their markets flooded with stock from the United States which has been produced under abnormal market conditions in that country and has been sold in Canada at prices which involve a loss to the manufacturer. These prices have been looked upon as a temporary expedient to meet the urgent necessity for ready money. In eastern Canada we have seen great quantities of southern pine knocking the bottom out of the market for Canadian pine, hemlock and spruce. In the west and on the prairies we have seen Idaho and California pine ruining the Prairie markets for British Columbia products. Apparently there has been no possibility in the past, of keeping these United States products out of our markets, short of putting a duty upon them, and this the Canadian Government has been unwilling to do. For many years the situation was rendered all the more difficult for the Canadian manufacturer by the fact that there was a heavy duty upon Canadian lumber entering the United States. Fortunately this was removed recently and some of our stocks are now finding a market across the line.

The immediate and most important effect of the 7½ per cent. duty upon rough lumber entering Canada will be an increase in the cost of delivering United States yellow pine in Canada. In connection with the low grades which have flooded our markets lately this will be a great relief and an advantage both to the Canadian lumber producer and to the Canadian consumer of lumber. A large percentage of the stock sent into Canada from the United States was of the undesirable short-leaf variety subject to dry rot and other defects which make it a poor building material and even a dangerous one. According to the prices of stock, the new duty will place an added charge upon rough lumber of from 50c. to $1 per thousand feet. In addition to this, the new freight charges involving an increase of 5 per cent. which has recently been permitted by the Interstate Commerce Commission, will add a charge of about 50c. a thousand, so that the cost of this stock delivered in Canada will be increased by from $1 to $1.50 per thousand feet. A large number of manufacturers and wholesalers whom we have interviewed upon this subject agree that such a charge will prove prohibitory and that we may expect to see the stream of low-grade southern yellow pine into Canada come to an end.

As to the long-leaf yellow pine which is used for construction purposes, in large timbers, this is a stock which has a great value to the operator, and it may be that the elimination of the short-leaf stock from the Canadian market will give consumers greater faith in the class of stock they are receiving. At any rate, much of the high grade yellow pine timber will still come into eastern Canada, though the added duty will help the manufacturers of British Columbia fir to compete with it.

From the Canadian lumber manufacturers' point of view and from the point of view of the Canadian consumer of lumber, we believe that the placing of this duty upon lumber will be beneficial. After it has been in effect for some time we believe that the government will see so clearly the advantages which the lumbermen have claimed for a duty, that they will be willing to let it remain, when the question of a revision of the tariff again comes under discussion.

During the first discussion following the announcement of the new duty, some lumber manufacturers whose chief markets are in the United States feared that there might be a regulation in the United States tariff which would automatically bring into effect a retaliatory increase in duty upon lumber entering that country. Investigation has proven that this is not the case and that there is no reason to expect that the United States will consider the increase in the Canadian tariff as anything other than a purely domestic arrangement rendered necessary by the abnormal conditions brought about by the war.

## Why The Retailer Should Advertise

There is no step in the progress of lumber from the woods to the consumer that is of greater importance to the welfare of the lumbering industry than the handling and selling of lumber by the retailer. The retailer is the man who actually comes into touch with the user of lumber. He should, for this reason, be the best posted man as to the uses and values of lumber, who can be found in the ranks of the lumber trade. The retailer should be conversant with all the uses to which his stock can be put and he should even be an expert upon these matters.

One of the first things that strikes a man in any other line of business, when he happens to investigate a retail lumber business, is the fact that the retail lumberman seems to be able to carry on business

without advertising. This is not as it should be. There are many retailers who do advertise, some who advertise extensively and others who advertise intermittently. There is also a class of retail lumbermen who conduct their yards in such a way as to make one think that they expect customers to come to them in much the same manner as water runs down hill. It is this last class that needs to be stirred up. Retail lumbermen of this kind are not only doing themselves harm, but are setting an example to their neighbors which is a detriment to the business development of the community in which they live. Tell one of these men that he should spend money in advertising and he will say that he has tried it and found it unprofitable, or he will let you know that, in his opinion, you do not know what you are talking about. Yet their is nothing more certain than that the retail lumberman who knows how to advertise can make it a profitable practice.

In the first place, consider the effect of advertising upon the man who pays for it. The first result of increased business from advertising is that the retailer moves more of his stock and makes a larger volume of profit. But in the second place there is the effect upon the man himself which is of almost equal importance. He begins to study the advertising question and the first thing that impresses him is the idea that in order to get the fullest value for the money which he is spending upon publicity he must make his stocks more attractive. It is no use spending money in getting a man to come to your yard, if you have the yard so poorly arranged or managed that the visitor forms a bad impression of your business methods and of your stocks. With an advertising campaign under way to pull customers to your yard, therefore, you will naturally commence to give greater attention to the details of yard management and the assortment of stocks than you ever did before. You will soon find ways of fixing up your stocks attractively which formerly you did not think were possible. Probably, in the past, such attention to stocks was not profitable, because the money and the time you spent would not result in increased sales until your possible customers had learned about it, and as you did not advertise they were slow to find it out. With a good advertising campaign already under way, anything you do in the way of cleaning up your yard and arranging stocks so that the customers can see and appreciate their values, is a source of profit. Moreover, when a man has once set out upon the road of improved business methods, he finds other possible reforms staring him in the face in all directions and he soon makes his business a very different thing from what it formerly was.

The way business is done nowadays, makes it practically necessary for a man who conducts a retail lumber yard to spend money upon advertising in his local papers, or to become a back number and sooner or later a failure. He may not actually come to financial grief, but he will fail to make, out of his business, anything like the success that is possible, and his influence as a member of the community will be as nothing compared to what it might be and should be. The retail lumberman should be an authority in his neighborhood upon everything pertaining to the construction of buildings. He ought to know a great deal more even than the uses to which lumber can be put. He ought to be able to give farmers of his district, and the others who use lumber, information upon any question about building construction that they may ask. He ought to be posted upon the uses of other building materials, so as to get customers in the habit of coming to him for information and so as to be able to point out to them just why they should use lumber instead of other building materials whenever there is a likelihood of substitutes.

This all means study and hard work, but it is the kind of study and work that will repay the retailer a hundredfold. It makes him a live man in his community and makes his business a large and profitable one, and one which is a pleasure to him instead of—as is too often the case—a nightmare. There is no surer way of bringing about this state of affairs than for the retail lumberman to commence to advertise; not in a hap-hazard fashion, but in a systematic manner. The fact that he is spending money upon advertising will induce him to look into all the ways in which he can get this money coming back to him and his business cannot fail to be vastly quickened and improved.

# A Contractor's Diagnosis of the Lumber Trade's Troubles

A prominent Winnipeg manufacturer, writing previous to the recent customs tariff changes, and discussing trade conditions in general, writes us as follows:—The building prospects for 1915 are by no means bright. Nearly all the western cities have been largely overbuilt during the abnormal conditions existing in the past four or five years and until the properties now vacant have been occupied up to a reasonable limit, speculative building which is very largely responsible for present conditions, will not be a profitable business and financial institutions should not encourage this class of building to anything like the same extent as in the past, since by so doing they can only lessen the value of the securities they already hold.

Despite the small amount of building required this year it does not seem as if there will be any material difference in the cost as compared with 1913-14. While labor conditions may vary in certain districts owing to a small demand and local differences it is not at all likely that the rate of wages will be altered to any extent or that there can be any great change in the cost of building material as a whole.

An important item in building is lumber and as freight charges are responsible for over 50 per cent. of the cost of this material to the wholesaler, the likelihood of any reduction on this account is very remote. For the past 10 years, the price in the west has been determined by competition from the United States and with their larger markets and greater output, prices are not so easily affected. On the other hand, the lumber business in British Columbia, during 1913-14 has not been at all profitable for the manufacturer. Several important concerns have gone into liquidation and a greater number have closed down until the conditions improve. Possibly less than 40 per cent. of all those engaged in the manufacture of lumber in the west have held their own during these years and while no doubt some material can be bought at forced sale prices from existing stocks, British Columbia manufacturers cannot quote lower prices than 1913-14 and stay in business.

The competition from the States in the lumber trade is scarcely legitimate. In contrast with a 35 per cent. duty in favor of the cement manufacturer, the sawmill men in the west have no protection whatever against foreign competition, while wages for common labor in British Columbia are $3.00 a day as against $2.00 in the western States, he has also a comparatively small and uncertain market cumbered with a credit condition which necessarily entails very serious losses upon the manufacturer in such times as these; consequently with lumber below cost in 1913-14 there is scarcely any likelihood of a lower price for 1915-16. To those whose knowledge is restricted to the vagaries of the retail trade these statements may seem unreasonable, but with United States dimension lumber quoted to wholesalers and others at $17.50 to $19, f.o.b. cars at all available points, after allowing freight charges averaging $9 per 1,000 ft. the British Columbia manufacturer does not receive a fancy price for all his work; logging, sawing piling, dressing, loading on cars, selling and collecting expenses, and probable losses.

The Canadian manufacturer has been forced by this foreign competition to dress down dimension lumber, in order to save weight, to a point detrimental to the buildings in which lumber is used so that at the present time 2-in. dimension is only 1⅝ ins. thick and United States dimension is even less, running slightly over 1½ ins. in thickness and as this is a matter of serious differences between the architect and the contractor, times without number, some effort should be made to standardize 2-in. dimension at not less than ¼-in. scant, as the difference in freight would only increase the cost from $1 to $1.50 per 1,000 ft., and a change of this nature would be in the best interest of all those connected with the erection of buildings as well as in the interests of the Canadian manufacturer.

The present unfortunate war is in no way responsible for the condition of the building trades and were it over to-morrow, there would be no improvement on these conditions. All the western cities

are built ahead of the development of the agricutural interests of the country and until there is a more even balance there can be no legitimate demand for city building. This depression will no doubt be to the advantage of the country as a whole, sending back many to the land and closing out to a large extent this parasitical business of the real estate gambler and all such fakers who persuade themselves and others that a country's growth is not governed by economic laws. Should this war continue for a year or two the agricultural interests of this country would make greater progress than under normal conditions and upon this progress depends the early solution of the present depression in the building trades.

## The New Tariff and Its Effect

In the course of a number of discussions upon the new customs tariff upon lumber entering Canada, the Canada Lumberman has secured from lumbermen practically only one opinion, namely, that the new duty will keep out the large quantities of low grade stocks from the United States which formerly had been such a serious competitor with Canadian pine, hemlock, spruce and fir. The belief is also general that this will be a good thing for the lumber manufacturers and consumers in Canada.

The chief discussion at present seems to be upon the effect of the new tariff, upon contracts entered into before it was announced. At a gathering of lumbermen recently held in Toronto this point was under discussion and the opinion was general that these contracts should be carried out as though there were no question of an altered customs tariff to be considered. This would mean that a sale f.o.b. a Canadian point meant that the seller had to pay the increased duty, while a sale f.o.b. a mill point meant that the buyer had to pay the increase. These are matters to be settled between the parties however, and are not likely to cause much difficulty. An interesting case is one where a sale of United States stock was put through by a Canadian wholesale firm, the purchaser being the Dominion Government. The firm has put the matter up to the Government and is waiting for its report upon the matter. The opinion of the lumber trade in Toronto upon the new tariff are given more fully in an editorial article based upon them, appearing in this issue.

The duty upon lumber, timber, etc., entering Canada according to the new custom's tariff, compared with the duty as it stood before the change in the tariff is as follows:—

| | | |
|---|---|---|
| Logs and round unmanufactured timber, handle, heading, stave and shingle bolts, n.o.p.; firewood, hop poles, fence posts and railway ties | Free | 7½ |
| Heading and stave bolts, and staves in the rough, of poplar | 20 | 27½ |
| Mexican saddle trees and stirrups of wood, treenails; hub, last, wagon, oar and gun blocks, and all like blocks or sticks, rough hewn, or sawn only; felloes of hickory or oak, not further manufactured than rough sawn or bent to shape; staves of oak, sawn, split or cut, not further manufactured than listed or jointed; shingles of wood; spokes of hickory or oak, not further manufactured than rough turned, and not tenoned, mitred or sized, and scale board for cheese | Free | 7½ |
| Planks, boards, clapboards, lath, plain pickets and other timber or lumber of wood, not further manufactured than sawn or split, whether creosoted, vulcanized, or treated by any other preserving process, or not | Free | 7½ |
| Planks, boards and other lumber of wood, sawn, split or cut, and dressed on one side only, but not further manufactured | Free | 7½ |
| Sawn boards, planks and dtals planed or dressed on one or both sides, when the edges thereof are jointed or tongued and grooved | 25 | 32½ |
| Manufactures of wood, n.o.p. | 25 | 32½ |
| Veneers of wood, n.o.p., not over three thirty-seconds of an inch in thickness | 15 | 22½ |
| Veneers of oak, rosewood, mahogany, Spanish cedar and walnut, not over three thirty-seconds of an inch in thickness | 7½ | 15 |
| Moldings of wood, plain, gilded or otherwise further manufactured | 25 | 32½ |

The quantity of logs scaled in British Columbia during January showed a considerable increase over December and was more than double the quantity scaled in January, 1914. The figures are as follows:—January, 1915, 51,225,817 feet; December, 1914, 40,620,000 feet; January, 1914, 21,209,000 feet. Since all the large camps are shut down it would appear as if the logs scaled in January were cut in previous months and brought out, following the placing of some business with Coast mills.

### Montreal Lumbermen's Views Upon the Tariff

Mr. J. S. Bock, of the Eagle Lumber Company, Montreal, expressed the opinion that the new lumber tariff will help to keep out inferior grades, but believes that it will have little effect on the good qualities. United States manufacturers have a considerable supply of the former, and are anxious to dump it on Canadian markets. The tariff should materially help the sash and door industry of British Columbia, which in Mr. Bock's view will be able to compete more successfully with the sash and doors imported from over the border. Instead of purchasing American sash and doors, the people in the east are more likely to buy British Columbia productons; the additional 7½ per cent. will mean a great deal to British Columbia mills. Even with this 7½ per cent., eastern sash and door manufacturers will find it difficult to compete with United States sash and doors, but British Columbia mills ought to be able to secure much eastern business, now that their foreign competitors are handicapped by the new duties. The question of who is to pay the duties on lumber imported from the States and contracted for prior to the introduction of the budget has arisen. Some of this was rough lumber, which had been duty free, and some dressed lumber, which will have to pay the higher duty. Mr. Bock pointed out that in the former case, f.o.b. Montreal, the duty should be paid by the seller; he had agreed to pay all charges, and ran the chances of a duty being imposed. The buyer had contracted to give a certain price for the lumber as delivered in Montreal, and had nothing to do with any extra and unforeseen charges that might be imposed. Mr. Bock instanced the heavy rise in freights to the United Kingdom, for lumber sold c.i.f. Liverpool. The seller in this case took the risk of the charges increasing from the date of the bargain, and of course had to pay. The same thing applied to the duty on lumber bought in the United States. In the case of f.o.b. mill the tariff would fall on the buyer, as he had undertaken to pay all charges, and this naturally included any higher duty.

Mr. Blair, of Blair & Rolland, Montreal, stated that the chief benefit of the new duties would be in the direction of keeping out the low grades of Georgia pine, sold here at prices which represented a loss to the manufacturers and which had a depressing effect on certain classes of Canadian lumber. The exemption from duty of the rough lumber was a factor in this business, and the imposition of a 7½ per cent. tariff will mean that if the United States manufacturers desired to continue the dumping they would have to face greater losses. In view of conditions, it was desirable to limit competition of the character referred to, and the tariff will probably help in this way. The extra 7½ per cent. will not, said Mr. Blair, have much influence on high grades, as it is likely that United States firms will bear a portion of this charge if they want to secure Canadian business.

Mr. C. B. Graddon, of the Graddon Lumber Company, Montreal, believed that the tariff will assist the lumber trade, particularly in such grades as have been dumped into this country. The lumber dealers are not likely to raise prices, having regard to present conditions; the effect will probably be that Canadian lumber will take the place of the United States stock in the case of the poor qualities.

### Buffalo Firms Object to Increase on Uncompleted Contracts

In connection with the duty which has been placed upon rough lumber entering Canada and the increased duty upon finished lumber, lumbermen in Buffalo, N.Y., held a meeting at the Buffalo Lumber Exchange on February 20th and passed a resolution declaring it to be the intention of the members present to refuse to pay any additional charge or to stand a reduction in connection with cars in transit and uncompleted contracts. The resolution is as follows:—

Inasmuch as the Canadian Government has imposed an extra import duty on lumber from the United States, and after a full discussion of the question at a regular meeting of this exchange, be it resolved, That we shall decline to pay this duty on all lumber sold, now in transit to Canada, as the duty is a Canadian war tax, any portion of which we will not assume.

### Lumbermen's Section of Toronto Board of Trade

A meeting of the lumbermen of the city of Toronto was held at the Board of Trade on Friday, February 19th, for the purpose of considering by-laws for the proposed Lumbermen's Section of the Board of Trade. After holding a luncheon, the members heard a report from the special committee appointed at a previous meeting to draw up a set of by-laws. The by-laws as presented were approved and signed by those present. The secretary was requested to present the by-laws to the Board of Trade as an application for the formation of a Lumbermen's Section. When the Board has approved of these, which it is expected to do at an early meeting, another luncheon will be held by the lumbermen, at which final steps will be taken for the formation of a section. Mr. J. L. Campbell, of Campbell & Johnson occupied the chair at the meeting and was requested to continue in the chair for the purpose of calling the next meeting.

# Hemlock and Its Troubles

**A SALESMAN'S CONCLUSIONS ABOUT THE SITUATION AND POSSIBLE REMEDIES.**

Contributed specially to the Canada Lumberman by one of its readers

**Have the manufacturers been responsible for the inroads of United States hemlock into Canada? Thin stock, prices and grades, matters which might be given some more study.**

NOW that there is a lull in the importation of United States hemlock and loblolly, short leaf, bull, Virginia or Tenessee sap pine, or any other of the host of nomeclature the Bureau of Forestry gives to differentiate it from the genuine long leaf Georgia yellow pine, the time is not amiss to call the attention of manufacturers of Canadian hemlock and Norway pine to a few salient truths, that perhaps may hurt their minds in the recital, but will, if a proper observance of them be given, help them to realize a few of the errors of their ways in the yast years, and mayhap be a means of avoiding a recurrence, in the years to come.

The hue and cry went forth over the whole of Ontario a few years ago that United States firms were getting a lot of business that should have gone into the current order files of Canadian manufacturers and wholesalers. This is and was a painful truth. Salesmen were coming in off their trips with a much smaller quantity of business booked than had been their custom. They were complaining of the low prices United States hemlock was being sold for right under their noses. They had to let orders go because firms would not see the direction the straw was being blown about, and refused to reduce their prices, preferring to sit smug in their siwvel chairs and send out preachments that these conditions would not last. They did last, however, and what was the result—salesmen had to pass up orders which went to the United States and shipments of United States hemlock and yellow pine were glutting the markets here, with a baneful effect on conditions then, and now, existing here.

### Competition Encouraged

The Canadian manufacturers held meetings and denounced the practice, but went right along their foolish way and kept their prices up to a base f.o.b. their mills which United States firms could meet, dressed one side, delivered in such towns as London, Toronto, Brantford and Hamilton. Let us see, Canadian hemlock was quoted at $20 and $21 f.o.b. mill points, while United States stock was sold for $20.50 and $21.50 sized and delivered. It cost the retailers $1.50 per M. ft. to have the Canadian hemlock sized, plus a stop off charge of 1c. per 100 lbs., this with an 8c. rate of freight cost them $24 delivered. Quite some difference, eh? Sometimes the freight cost higher but the shipper did not care a rap about that—he did not have to pay the freight charges, so why should he worry? I know of a case where the shipper smiled out loud when protest was made about shipping the stock green from the saw. It was not always necessary to ship lumber green from the saw—leaving the dry stock on their yards, for some favorite customer, where they remained a monumental mockery of their shortsightedness. They did, however, and there are firms today who wish they could reduce the size of the lumber monuments, for they are certainly weighting down to the death a number of firms; and it would seem to me that a most appropriate inscription that should be tacked on these piles would be "IN PAINFUL MEMORY OF THE GREAT GOD, GREED."

The Canadian manufacturer and wholesaler as a rule does not take as much interest in his customer's welfare as he should. When a car of lumber leaves their yards they should see that it is weighed properly, and a protest made in the event of the railroads overweighing it. They should also see to it that the railroads give it proper despatch after they have it in their hands. It should be traced through to destination and everything done to facilitate its movement. Show your customer some SERVICE and see how quickly he will respond to this good service by placing repeat orders with you. You go into a hotel and pay for service and expect it in return. If you do not get it you go to some other hotel that caters to you, don't you? This rule applies to the lumber business just as well.

Do not, for Heaven's sake, always give the old answer that "you will write the mill to hurry shipment." See that shipments are made properly and, when a customer asks you about his order, be in a position to tell him the minutest details regarding it. It pays. Anticipate these inquiries and have information ready to give him. IT CAN BE DONE. I have known where it has been done and the firms profited thereby. It took an extra clerk to handle these details but it was worth many times fifteen dollars a week to have it done.

We are now experiencing the results of keeping our prices up in the sky. United States firms have, in the past year, shipped enough hemlock and yellow pine into Canada to last a long, long while, and our stocks of hemlock go begging. Do the manufacturers and wholesalers, who have millions of feet of stock on their yards now, realize that perhaps it would have been much better to have dropped prices in the beginning and thus have disposed of their stocks and realized money on them rather than to have waited so long, eventually dropping prices to meet this competition, and then only selling an odd car now and then? The money they would have realized by the disposal of their lumber would have enabled them to go into the bush this winter and get more logs—now they will be curtailed in this respect and a great many of their men will be out of work all winter or a goodly part of it. Don't make the mistake a second time.

### Plenty of Timber Still in Sight

I have heard it mentioned that at the time the United States hemlock and pine were being shipped into Canada there was a great shortage of Canadian hemlock and there was none to be had. Now this is a fallacy, pure and simple. Look at the amount of stock that can be purchased today if you really want to go up into the north and buy. It's the old cry of wolf over again. I have heard that there is very little hemlock left in Canada; that outputs are curtailed for this very reason. Many of these stereotyped phrases are "belched forth from capacious lungs" resting in the bodies of some Sir Oracles who love to rush into print whenever they can, to talk about the apparent shortage of standing timber, outputs, etc. Is it not peculiar, that wherever there was the least vestige of a short production in a section, from other sections there came enough lumber to amply supply all markets? Is there not always some means at hand to supply a customer with exactly what he wants? There always seems to be enough to go round. In reading, only a few days ago, of a large lumber corporation in Ontario which was liquidating, and which owned large timber limits in the Georgian Bay district, I counted up the quantity of hemlock advertised for sale on the various limits, as per their estimate, and it totalled something nearly a billion feet. Remember, this is only one firm. How many other firms are there operating in the Muskoka, Parry Sound and Georgian Bay districts, and in the section north of Lindsay, who own or control many more billion feet of hemlock? Get out of the habit of exaggerating the shortage of hemlock lumber.

The time is right at hand when Canadian manufacturers of hemlock can regain their lost trade, and best of all, their lost prestige. Retailers prefer Canadian hemlock as a rule, because it is graded better, runs less to shake and is finer grained because of being smaller timber, but they will not pay a premium for it over United States hemlock or yellow pine, which they can buy for from $2 to $3 per M. feet less. And you cannot blame them. Now is the time for Canadians to get together and establish a base price that will make it practically impossible for the United States manufacturers to compete, except at such an excessive loss that they will quit shipping their stocks here. Once you have the trade back, however, do not go boosting your prices again and have a repetition of the situation that existed from June, 1913, right up to November, 1914. Having had the fire applied to your feet once, don't get caught again.

Another point I wish to call to attention. United States manufacturers size their lumber. So could the Canadian manufacturer of any account if he would only invest some of his money in a rip saw and place it in his plant. Take some of the money you spend on pleasure trips and put it in a machine and you could size your stock at a cost of 50c. per M. feet. The machine would pay for itself in a short while. As it now stands you ship your lumber to some other point, stop it off there at a cost of 1c. per 100 lbs., and then have to pay from $1.25 to $1.50 per M. feet for the work. You do not have to pay this, of course, but your customer does, and this is what he is complaining about. Then there is another point worth considering—when you size the stock at your own mill and load it in a car it goes right through to destination and there is very little delay in transit. A lot of inconvenience can be overcome. Your customer will be better pleased with the service rendered him and a general all-round good feling will prevail. Scheme up some remedy for this question right away.

Mr. Manufacturer, get your eyes opened and get them opened up right now, otherwise you will be holding the bag again in the year 1915, and your lumber will again be piled high in your yards as it is now. Give the retailer something for his money. He is a pretty good fellow, as a rule, and is always willing to meet you half way. Get him down to some of your meetings and let him present his side of the questions, and then collaborate on a remedy for conditions. Now is a good time to do this—you all have more or less surplus time on

your hands these days. You can do it if you are not too set in your ways of thinking and refuse to see the light.

### The Matter of Thickness

Here is another point worth considering. United States hemlock and yellow pine have been coming into Canada thinner than Canadians are cutting their hemlock. Their inch has been, invariably, resawed from two-inch stock and then dressed one side to three-quarter inch. Their two-inch has been sawn 1⅞ in. and frequently runs as low as 1¾ in. Now, if the retailer and contractor have been able to use this stock in such thicknesses from the United States, why cannot they use it from Canada? Suppose you start practising this mode of cutting, right now. The retailer has been educated up to accepting thin lumber by now, and if he should protest, just come back at him with the statement that he was able to use United States stock which is thinner all around. Tell him we are just emulating the nice example set us by our United States brothers. Did you ever sit down and figure out exactly what this difference is? I don't believe many of you have. Let us give this question a little consideration. Suppose you cut your stock ⅛ in. scant in thickness and ⅛ in. scant in width. Let us see how this figures out. Take a piece of 2 x 10 x 12—according to Canadian measurement you supply 20 feet actual measurement, while the the United States method you only supply 1⅞ x 9⅞ x 12 or 18 33/64 feet. In other words, they supply 1 31/64 feet less on every piece of this size, but they get paid for 20 feet of lumber. Let us go a step further—for every actual 1,000 ft. of lumber Canadians supply the Americans only furnish in actual measure 927 1/3 ft., of a difference of 72 2/3 ft. Figure this at a base price of $17 (the ruling price when this was written) and you will see there is a difference of about $1.23 per M. feet. Of course, this will figure out differently on other sizes, but I think a correct average would be a gain of 66 2/3 ft. in every thousand feet. Now what can be done with this extra $1.23 per M. feet? It will size your stock for you and help along on the general expense. In addition to this, Mr. Manufacturer, you gain in piece or log production to the extent of 15 to 20 per cent., which means another $1.25 to $1.50 per M. feet.

Now, Mr. Manufacturer and Wholesaler, cannot you understand a little what your salesmen have been up against on the road? No wonder orders have not been coming into your books in such volume as was evidenced in the fat years of 1910 to 1912. It has not been a bed of roses for your salesmen the past year and a half. I know, for I have travelled Ontario until I havt been foot weary trying to land orders—searching in the by-ways as well as along the great highways. It has not been a bed of roses for the salesmen this year. The thorns have been pretty thick and they have scratched very hard—thank you.

### Thin Stock Could Easily Be Introduced

Perhaps some of you are timid about starting the cutting of your hemlock thin. Do you know they have been doing it down east for years, and don't seem to have any trouble with the trade. Perhaps some old-time retail lumbermen will kick on the thinness at first, but if you take concerted action—get your mills lined up and DO IT, they will simply take the stock the way they can get it only, and when they find all mills cut their stock in the same manner, they will adapt themselves to the new order of things. If you inaugurate this method in your mills you will have placed a pretty firm barrier in the way of United States hemlock and yellow pine dimension. Think this over seriously but ACT QUICKLY. I understand a few firms up north have been cutting their stock the past year ⅛ in. scant and no complaints have been registered against it by their customers. This only goes to show that you can all do it and be on equal footing with your neighbors.

Here is another point—why don't you make a grade of "merchantable" to equal the United States grade of merchantable and sell it for a dollar or so less per M. than regular No. 1 stock? Put in 60 to 70 per cent. of No. 1 and balance out with the top end of your No. 2, and if they want such a grade let them have it. Don't call it "mill run"—that is a misleading term. How many of you realize that this was the club that retailers held over the heads of the salesmen this past year and a half? If they could use this percentage of No. 2 from the United States manufacturers why cannot they use it from the Canadians?

There is an association in Ontario among the manufacturers which meets every once and awhile to discuss conditions and prices, etc. On many occasions the members have stated they were holding the prices up to schedule, when it was a known fact that they were willing to take anything they were offered for their lumber. What good is an association if members are not honest with one another? You don't want an association to maintain prices. You want it more for the ethical betterment of conditions and your business. Men will naturally resort to equivocation about prices they are getting, even when we salesmen see invoices in offices we visit, showing exactly at what they sell the stocks. Don't go to these meetings and deliberately state you are averaging $19 for hemlock up to 16 ft. long, when you are putting in 18 and 20 ft. stock at the same price. Murder will out and statements like the above get nailed to the cross sooner or later—perhaps you don't care what the other fellows think, but take it from me, the other fellow's time comes and when it does you are going to feel the results very keenly. The good opinion of your fellowmen is a valuable asset in business these days.

### A "Merchantable" Grade suggested

I hope the time is right at hand when Canadian Manufacturers and wholesalers will really get together and act in harmony along such lines that will bring them back their lost business, hold the trade they now have in hand, and open up new fields for their stocks. You will have to bear in mind the fact that you will have to establish a base price, that will preclude all possibility of the United States manufacturers again getting into Canadian markets without entailing such severe loss that it would be suicidal to attempt it. You will have to cut your lumber ⅞ in. and 1⅞ in. thick and you will have to make three grades, viz.: No. 1, merchantable, and No. 2; and in the last-named grade, red heart, dry rot or dozy lumber will not be admitted. This kind of lumber is only fit for the fire and you would do well to consign it to that destination.

If you adopt some of these recommendations you will be on a much better footing than every before, and it will be a long time before you will be bothered by United States firms dumping their stock into your rightful fields of endeavor, to the demoralization of the healthy conditions that should exist here. You will also keep your money from going out of the country, which is something to guard well against, and a new state of prosperity will be established that will take only an avalanche to demolish.

Wake up! Get some new ideas in your business make-up and you will be pleasantly surprised to see how quickly your faces will be wreathed with smiles instead of the glum looks that everyone now seems to be putting on their countenances.

## Safety First in Dominion Parks

At the request of the Dominion Parks Branch of the Department of the Interior, the E. B. Eddy Company has recently put into effect an excellent precautionary measure against forest fires. This company is now printing in striking colors and attractive design on their match boxes an effective fire notice, warning the public not to throw away burning matches especially in the woods. It is a well-known fact that many forest fires are due to carelessness in handling matches.

It is recognized that the best way to get people to realize the danger with matches and fire is to have the necessity of care constantly impressed upon them. It is thought that if a person sees a fire warning notice every time he takes a match from a box, the exercise of care with fire will gradually become a habit with him.

Up to the present time, however, the match itself has also been at fault. If an ordinary match is lighted and allowed to burn from one end to the other, the flame then extinguished, it will be observed that the burned portion remains a live coal for almost a minute after the flame is out. The E. B. Eddy Company are undertaking to correct this fault by impregnating their matches so that when the flame is out the match is dead. Some of their matches are now treated in this way and it is the intention to have all their matches impregnated as soon as machinery can be installed for the purpose.

Other industrial companies are also co-operating with the Dominion Parks Branch in the campaign against destructive fires. Last spring the Canadian Pacific and other railways placed fire warning notices in their smoking cars and last fall inserted them in their menu cards. Arrangements are also being made with the Manager in Chief of the C. P. R. Hotels to have very neat and attractivefire memoranda placed in the guest rooms of the hotels operated by the company.

---

## Shingle Exports to the United States

Canadian-made shingles shipped into the United States during the year of 1914 totalled 1,248,726,000 pieces (6,244 cars), valued at $2,773,009. The 1914 shipments were duty free, under the Underwood tariff. In 1913, Canadian-made shingles shipped into the United States, totalled 561,363,000 pieces—of which 215,268,000 were shipped in under the Underwood tariff from October 4th to December 31st; and 346,095,000 came in from January 1st to October 3rd, absorbing the then fifty-cent duty of the Payne-Aldrich tariff.

In 1912 Canada shipped 539,434,000 shingles into the United States absorbing a fifty-cent duty. Here is the story in brief.

| | Pieces |
|---|---|
| 1912—Under 50 tariff ... ... ... ... ... ... | 539,434,000 |
| 1913—9 months, 50c. tariff ... ... ... ... ... | 346,059,000 |
| 1913—3 months under free trade ... ... ... | 215,268,000 |
| 1914—Free trade ... ... ... ... ... ... ... | 1,248,726,000 |

---

That the British Columbia shingle manufacturers are breaking into the Atlantic Coast markets was demonstrated recently by the arrival in Seattle of 6,000,000 shingles for reshipment on one of the Dollar liners to New York City.

# British Columbia's Finest Cedar Plant

## Vancouver Lumber Company's Mill at Roche Point Now Ready for Operation —The Latest Thing in Efficient Equipment

Local millmen and manufacturing experts from the other side of the line who have inspected the new plant of the Vancouver Cedar Mills, Limited, at Roche Point, on the North Shore of Burrard Inlet, about seven miles from Vancouver, are firmly of the opinion that no plant on the entire Pacific Coast is better designed and equipped for the economical manufacturing of cedar lumber and shingles. The site, comprising about seventeen acres, with over 1,400 feet of water-frontage, was originally acquired by the Red Fir Lumber Company, Limited, but after erecting a substantial mill frame and large hotel building, the company met with financial troubles. Early last spring the property was taken over by the Vancouver Lumber Company, Limited, following which Managing Director E. C. Knight called in A. B. Pracna, mill architect and designer, Seattle and Vancouver, to re-model the sawmill and supervise the construction of the shingle mill, power house and other buildings.

The outstanding feature of the plant equipment is the wide use that has been made of transmission systems and gravity carriers. Wherever possible the handling of stock is done automatically, with the result that the operating force required will not exceed seventy-five men when every department is being worked to full capacity. Keeping in mind the fact that the ability of Puget Sound millmen to manufacture cheaply is held to be largely due to their use of labor-saving machinery, it is cause for satisfaction that another thoroughly modern plant has been added to the British Columbia list.

### Description of the New Plant

The sawmill or lumber department is designed and built especially for the manufacturing of cedar lumber and is what is termed a "short mill." The extreme length that can be sawn in this plant is 24 feet. The object of the lumber mill is to work the higher grades of lumber out of the log and send the balance to the shingle mill to be manufactured into shingles. As there is no call for long cedar lumber, and it being a fact that the best and most lumber is in the butt end of the log, and practically none in the top end, it is plainly seen that it is uneconomical to send the whole log through the sawmill. As the logs are brought from the woods in 32 and 40 foot lengths they are cut up in the desired lengths by a motor-driven drag saw located on a float at the foot of the log slip.

The equipment of the sawmill consists of the log haul, log stop, Simonson turner, overhead canter, three block carriages with 72-in. opening, one 9-foot single cutting band mill, 10 x 32 direct steam driven Wickes gang, 8-in. x 60-in. edger and 24-foot overhead trimmer, with air-lift for saws, and a very complete arrangement of live rolls, transfers, etc. Located in the main line of rolls from band saw, and directly opposite the back edger table, is a steam cant lifter for throwing the shingle cants from the live rolls to the transfer chains, which carry the cants to a set of live rolls. These rolls deliver the cants to a cant cut-off machine, which carries a 60-in. circular saw. This machine consists of a bed of live rolls on a carriage, which in turn is moved back and forth by a steam cylinder, commonly called a "shot-gun feed." The work of this machine is to cut-off the cants to the proper lengths for shingles. On the lower floor of mill is located the line shafting, drives, conveyors, etc., all being of extra heavy proportions and substantially installed. The filing equipment is complete and is located on the third floor directly over the band mill.

The mill frame is of exceptionally large timbers and is substantially supported on concrete piers. The main part of mill is 46 feet wide and 152 feet long. A wing on one side of mill in which is located the cant cut-off machine is 32 feet wide and 64 feet long. The engine room is located on this side of the mill, and is also a wing 32 feet wide and 32 feet long, in which is located an 18-in. x 24-in. twin slide valve engine with balanced valves. This engine rests on a solid concrete foundation and is of ample power to drive the mill to capacity. On the opposite side of mill, and towards the rear, there is a wing 24 feet wide and 30 feet long which houses the lath machinery, consisting of lath bolter, lath machine, lath trimmer, transfers and conveyors.

After the lumber passes through the trimmer it drops into a set of live rolls which delivers it onto a section of "Steeple-Top" transfer chains. Opposite these chains there will eventually be installed a vertical roller feed band resaw with 66-in. wheels, and housed in a building 44 feet wide by 64 feet long. The lumber which is to be resawn is jumped off the steeple-top chains mentioned above and is delivered onto a set of transfer chains, which convey it to the resaw. The lumber being passed through the resaw, it is again delivered on to the steeple-top chains, and again goes by the marker, who may return a part of it to the resaw for further manufacture. The steeple-top chains convey the lumber to a set of transfer chains which delivers the lumber to a system of gravity rolls, which in turn delivers the lumber onto the docks for shipment to the company's plant in the city of Vancouver, where it will be kiln-dried and worked up into the finished article.

### Twelve Upright Shingle Machines in Line

The shingle mill department is housed in a separate two-storey building adjacent to the north of the lumber department. This building is 42 feet wide by 150 feet long, and is of heavy timbered construction and substantially supported on concrete piers. The upper floor of this building contains twelve upright shingle machines. This floor also contains a knee bolter for sapping and shaping the blocks and for cutting away the defective material. The blocks are conveyed from the cut-off machine in the sawmill by an endless chain which passes by the knee bolter and in front of the shingle machines. The block pilers take the blocks from this endless chain and place them on a bench within easy reach of the sawyers.

On the lower floor is located the line shafting, conveyors, shingle bins and packing frames. Special mention should be made of the manner in which the bunches of shingles are carried to the kilns or dock. This is done through a system of conveyors and gravity rolls. The first section of conveyor is reversible, so that in running one way the shingles are conveyed to the kilns, and running the other way conveys them to a set of gravity rolls which in turn delivers them directly to the dock for shipment in the green state. The shingles as they are sawn and clipped are dropped into their respective bins by the sawyer above. The packers below then proceed to pack the shingles into the neat and symmetrical bunches for which British Columbia is justly famed. Each bunch contains 250 shingles. The packer as he completes a bunch places it on a bench close to his side, and along comes the marker, whose duty it is to inspect or stencil the bunches with the proper grade and trade marks. He then places the bunches onto the conveyor mentioned above to be conveyed to the dry kilns or dock.

The engine for driving the shingle mill is housed in a one-storey lean-to wing built onto side of main building. This wing is 22 feet wide and 31 feet long. The engine is an 18-in. x 24-in. twin slide

Plant of Vancouver Cedar Mills, Limited, Roche Point, Burrard Inlet, B. C.

**Interior View of Sawmill—Vancouver Cedar Mills Co., Limited.**

valve with balance valves, and is of ample power to drive the shingle mill to capacity.

The kilns for drying the shingles are located to the west of the mill and a sufficient distance away to afford protection from fire. There are three of these kilns, each 20 feet wide and 120 feet long, and of ample capacity for the shingle mill. These kilns are of the North Coast type and were furnished by the North Coast Dry Kiln Company, of Seattle, Washington. The kilns are fireproof, being of hollow tile and cement construction.

As mentioned before, the bunches of shingles are carried to the kilns by a system of conveyors, and at the receiving end of the kilns they are made up into proper loads for passing through the kilns. After they have passed through the kilns they enter the cooling shed at the discharge end of kilns, where they are left a sufficient time to gradually cool off. From here they are passed into the storage shed, still in the original load and on the same trucks on which they entered the kilns. This shed is 64 feet wide and 108 feet long, and is capable of holding several millions of shingles. It is of heavy timber construction and substantially supported on concrete piers. From here the shingles are placed onto a system of gravity rolls, which conveys them to the dock for loading on cars or transfer barge. It can readily be seen that the complete operation from log to shipping dock is done with the minimum amount of labor and handling.

### The Power House and Steam Plant

The steam plant for supplying steam to the engines and dry kilns is contained in a separate building, located to the north of sawmill and east of the shingle mill. This building is 50 feet wide and 82 feet long, of heavy timber construction, with crib walls and substantially supported on concrete piers. In this building there are five high pressure, double butt strap horizontal tubular boilers, each 72-in. diameter and 18 feet long. Three of these boilers are set in one battery and two in another. The battery of three boilers is connected to an induced draft system of the Miller type, the other battery has natural draft with stack located outside of building on a concrete foundation. The boilers and induced draft system likewise rest on substantial concrete foundations. The boilers are set with Dutch-oven furnaces, which are automatically fed with sawdust by a conveyor from the sawmill. Primarily the battery of three boilers is for the sawmill and the battery of two boilers for the shingle mill, but they are all piped together, with the required valves between, allowing either of the departments to operate independently without the necessity of operatnig all five boilers, there being arrangements made in the shingle mill and a conveyor provided for bringing fuel directly from the shingle mill to the battery of two boilers. In front of all five boilers there is a steel deck to facilitate the firing of the boilers and for storing sufficient fuel for night and Sunday requirements, it being necessary on account of the kilns and insurance to keep up steam at all times.

**Interior of Shingle Mill—Vancouver Cedar Mills Co., Limited.**

In addition to the cants coming from the sawmill there is another means provided for supplying the shingle mill with material. This is what is termed a cut-off or block room, and is a separate building 30 feet wide and 40 feet long, located adjacent to the log pond. There is a separate log slip for this department, which contains a log haul-up, 84-in. circular saw for splitting the blocks to the required size. The blocks are carried to the shingle mill by one conveyor and the refuse by another. This department is driven by an independent steam engine placed on a solid concrete foundation. The building is of heavy timber construction, substantially supported on concrete piers. This department is primarily for the working up of that class of logs which would not pay to pass through the sawmill, and besides, it allows the shingle mill to be operated independent of the sawmill.

The refuse from the entire plant is conveyed a sufficient distance away to avoid all risk and consumed in an open fire, the dump being protected by a wire mesh screen 30 feet in height, and outer end of burner being carried by a water tower as an additional protection.

From the foregoing, it will be noted that the plant has been designed and built with a view to permanency and with the view of cutting the cost of manufacture to the minimum.

The capacity of the plant is figured to be about 100,000 feet of lumber and 350,000 shingles in ten hours.

---

## Trade Improvement In Sight in the West

Mr. E. J. Palmer, managing director of the Victoria Lumber & Manufacturing Company, Chemainus, B.C., is reported in a recent interview as follows:—"Numerous inquiries have been made for lumber, but the dominant factor is the shortage of tonnage on the North Pacific Coast. With the present rates prevailing, it is impossible to ship to the old country, and we are chiefly interested now in the rumored demand for 500 million feet which is reported from Paris for the French Government to replace losses in the war and for military purposes. Some inquiries are being prosecuted in that behalf. If that business should come our way it would mean the revival of the industry in British Columbia.

"The Island will take some share of the big contract recently announced, orders being placed at Nanaimo. We do not expect that there will be an improvement in tonnage till June next, though if this French contract proves to be a bona-fide Government matter, the Government would be in a position to find the tonnage which is impossible to the private order.

"So far as the northwest market is concerned, I think we shall see a revival, in the form of a normal demand this year, because the conditions during the last few years have been abnormal. Through the decreased demand in the prairie provinces of recent months, the mills have all their yards stocked, thereby leading to the closing down of plants. If there begins to be a call for this lumber, the mills must reopen in order to cut to keep stock up, and that would, of course, lead to a material improvement in conditions. There will not be development until the market improves, but that improvement should come shortly. One of our difficulties has been the decreased demand for building material in the towns, which has in ordinary times kept the stock in the yards at an average level."

---

At a recent session of the British Columbia Legislature, the Minister of Lands brought in a bill to relieve holders of special timber licenses who do not pay their renewal fees in time. This act is to remain in force until March 31st, 1916, and it reduces the fine payable along with the necessary renewal fee to $5 if paid within 30 days, $10 if paid within 90 days, or $25 if paid within a year, or at the rate of $25 a year if paid at any later date within the life-time of the act.

# The Reader's Viewpoint on Trade Topics

## Practical Ideas Upon the Handling of Credits and Collections—Science and Tact the Chief Requisites

### System and Perseverance Necessary for Collections

Editor Canada Lumberman: Kingston, Feb. 19th.

While we have had some success in our collection system, we are still open to receive any new ideas that may be suggested.

We have, for some time, debated the question of adopting a uniform system of discount, but up to the present time have not done so. In our collections we resort to various methods, according to the character and standing of the customer with whom we are dealing. A method which may be very successful with one customer may be utterly useless when tried on another.

In the first place, we have found it a great advantage to issue a statement at the first of the month to every customer. The dealer who fails to render accounts to his customers promptly and regularly can only blame himself if they are slow in paying up. The receipt of a statement at the first of the month should not be accepted as an offence by any customer, and when he becomes educated to this plan, he does not object to it. We try to get our customers to pay monthly. If the goods are sold on a very close margin, it is imperative. If a customer fails to pay inside sixty days his statement is marked "Past Due." If this does not bring prompt results, he gets a special letter written in a gentle tone about the 10th of the month. If, at the beginning of the third month, the account still remains unpaid, he is written a letter which is a little stronger in tone than the previous one. After ninety days, interest at 7 per cent. yearly is added to the invoice, as all invoices contain a printed notice that interest is charged at 7 per cent. after sixty days, although we seldom enforce this condition if the customer pays in a reasonable time.

If a customer, at the time of purchase, asks for time, we request him to sign a note bearing interest, or if he can not meet his obligations, we often have his account converted into a promissory note.

If the account has run so long that it is doubtful, and we find it necessary to engage an attorney, we usually warn the customer before placing the matter in the attorney's hands, and this, very often, brings results. If we have to give notice of suit or threats to enforce payment, these are usually made in writing, for we find, as a rule, it is bad policy to make these verbally. A card record of delinquent customers is kept, and all promises are carefully noted thereon.

Some accounts can be collected quite readily by calling the customer up on the telephone, especially if he be a farmer using a rural line. A customer on a rural line will not take any chance of his neighbor hearing him being asked for payment by telephone, and most rural customers will immediately make some arrangements about payment rather than have this repeated. There are other customers who have bank accounts, but whose policy it is to keep their money as long as they can. This class is more impressed by a bank draft than anything else. There are still others to whom a personal visit is more effective than anything else, but we have found that this takes a great deal of time, and in most cases, mail is much cheaper, and more satisfactory, if the letters are tactfully and judiciously prepared. If one finds that a customer is determined to evade payment of account, or to raise some technical objections, it is advisable to procure the help of an attorney, one who makes a specialty of this business.

We also make some use of the Mechanics' Lien Law, and in cases where a customer is doubtful, we make sure that a lien is registered against the property for which the goods are being supplied before the thirty days' limit expires, and we have had cases in which the owners were completely taken by surprise when they realized that we had a claim against their property in this way.

The collection of accounts is a science and requires tact. Where tact and good judgment, and the monthly system of rendering accounts are in use, there ought to be less than ½ per cent. of losses through bad debts.—S. Anglin & Company.

### The Credit Question—A Retailer's Plan That Works

Editor Canada Lumberman:

In regard to our credit arrangements, we make all terms cash 30 days, and after that bank interest of 7 per cent., and we stick to this regardless of what may be thought by others. We live up to our part of this and needless to say the other fellow has to do the same.

When making a sale the terms are distinctly understood to be 30 days cash, and, of course, this is one of the most essential points, as it saves many minutes time and worry later on in the deal. We take a man's note (if he is responsible) with interest at 7 per cent., which enables us to go ahead without any inconvenience with our credits.

By this method we have made both friends and, I suppose, some enemies, but when a man buys from us he knows that he is used just the same as the other fellow, and that one man is getting no longer terms than the other. This places everybody on the same basis.

We give no discount for cash as our terms are understood to be cash, and that settles the term question.

As for having uniform collection I would say that if all the dealers lived up to any arrangement which was made it would be all right, but you cannot get them all to stay with the game. I might also say that the fellows who do most of the crying about these things, and who are always trying to tie another dealer up to an agreement, are the fellows who are getting the small end of the business, and who will not move out of their tracks to get business. We have them not very far from here, who have in the past tried to get us to form an association to boost prices up to their prices but not down to ours. Their idea is very plain, but I feel that if we are satisfied with our prices and profits, the other fellow should be the same, but no, they find that we are probably buying a little better than they are, and wish to pull our business down a little, to let them have a chance.

These are my views, on some points, but, of course, I am open to change my views if I am convinced of anything which will suit our requirements better.—Retailer.

### Watch Your Credits and Collections Will Take Care of Themselves

Editor Canada Lumberman: Toronto, February 16th.

We have no special system for handling credits and collections. The only advice we can offer our fellow lumbermen, which has proved fairly successful with us, is: watch your credits closely and your collections will take care of themselves.

As to discounts we take the largest cash discount we can get on all occasions, and give as little as possible, and we are always able to show a credit on the right side of the ledger in our discount account.

As to an exchange of credit information honestly among the members themselves, a list kept by the secretary of the lumbermen's section, of the Board of Trade, open to all members, showing the names of the dead ones and the slow ones, would fiill the bill and save 90 per cent. of the bad debts in the wholesale and retail trade.—Reid and Company.

### Admits Necessity for Collection Improvement

Editor Canada Lumberman:

I am sorry to say that our system is much in need of improvement and I will watch with interest anything that you may publish and try and benefit thereby.

I hope you will get information that will be valuable to you.—Lumber Retailer.

### U. S. National Forests Much Used

Selling some billion and a half board feet of timber and supervising the cutting on several thousand different areas, overseeing the grazing of more than 1,500,000 cattle and 7,500,000 sheep, and building more than 600 miles of road, 2,000 miles of trail, 3,000 miles of telephone line, and 700 miles of fire line are some of the things which the United States forest service did last year as disclosed in the report by the chief forester for 1914.

There is need, says the chief forester, to increase the cut of timber from the national forests wherever a fair price can be obtained for the stumpage, because a great deal of it is mature and ought to be taken out to make room for young growth. Unfavorable conditions in the lumber trade caused new sales of national forest timber to fall off somewhat during the past year, though the operations on outstanding sales contracts brought the total cut above that of the previous year by 130,000,000 board feet. There was, however, a big increase in small timber sales, these numbering 8,298 in 1914, against 6,182 the previous year. Desirable blocks of national forest timber have been appraised and put on the market, and it is expected that these will find purchasers when conditions in the lumber industry improve. All told, the government received $1,304,053.66 from the sale of timber on the forests in 1914.

A report from Bobcaygeon, Ont., says that there is unusual actiivty this season in pulpwood, and all available ground in the railway yards is being filled with piles of round wood. If the road holds good, it is expected that well on to 1,500 cords will be delivered. It is being bought for shipment to the States, and is composed of poplar, balm of Gilead, spruce, and tamarac.

## Who Can Furnish Cheap Box Lumber For England?

Editor Canada Lumberman:

I am looking for a cheap class of lumber for export to compete with the Riga white wood, now imported from the Baltic, which is used for box making purposes to hold foodstuffs, consequently the smell of the wodd is an important factor. I think the eastern Canadian spruce is the nearest substitute so far, but it may be that you can inform me of some other suitable wood. It must be something similar in weight, texture, color, grain and smell, to Riga or Libau whites. If you can advise me whether such a wood is obtainable and from whom, I shall be extremely obliged.—**English Importer.**

Any of our readers who are interested in the above enquiry wili find in the following description of the wood from which Riga deals are cut an explanation of the class of wood required.

Spruce or white fir (Picoe excelsa) produces the timber known as "Baltic whitewood" or white deal. It comes from the same districts as the (Baltic) redwood (Pinus sylvestris, Linn), grows to a height of 90 to 100 feet or more, with slender trunk, but carries its branches nearer the ground than the redwood; hence the great number of knots to be found in it. The wood is nearly white in color, a yellowish white with sometimes a reddish or brownish tint, straight in the grain, light, tough, and elastic but soft, yet more difficult to work than redwood, owing to the hardness and great number of the small knots it contains, and inferior to it in every way. It is a timber which shrinks a good deal, but has only a moderate thickness of sap, which is sometimes difficult to distinguish owing to its being nearly the same color as the heartwood. In the poor qualities it is the timber largely used by the "jerry builder," and in a good deal which owners would not call by that name; inferior in strength and durability to redwood, unfitted for good exterior wood, suitable for a cheap description of interior work such as shelves, common tables, flooring and panelling, it is used for all the classes of interior work for which the better class redwood is used, and is probably quite as much used as redwood in ordinary house building; some of the best of it is very good, but it is liable to shrink if less than an inch thick. A large quantity is used for scaffold poles and pit props in mines, of 6 to 8 feet in length and 6 to 8 inches in diameter. It is much valued as one of the resonance woods for the bellies of fiddles and violins, as the sycamore and maple are for the backs. Not only is there a large trade in planed white as well as yellow boards, which are also imported tongued and grooved, but a great quantity of manufactured joinery, doors and door frames, window frames, etc., comes from Norway and Sweden. The best of the Norwegian timber is used up for flooring and planed goods and manufactured joinery. Spruce forms much the larger proportion of the timber used in the toy trade of Austria and the Tyrol. Good deals, either yellow or white, should be bright in color and close in grain; a dull color and open porous grain of a wooly character betoken poor wood. Spruce is hardly distinguishable from fir except by the presence of resin ducts, which are wanting in the latter.

The usual trade terms for Baltic timber are as follows:

Logs or baulks, various length and sizes, up to 40 feet long.

Battens and deals, various lengths, 4 to 9 inches wide and 2 to 4 inches thick; average lengths about 18 feet.

Planks are pieces of various lengths and thicknesses, 11 inches wide and over, and 12 feet and upward in length.

Boards or flooring are pieces 1-inch thick and under.

Great quantities of spruce, especially from the smaller-sized trees, are manufactured into pulp for paper.

Fir is a name indiscriminately applied to the pines, spruces, and firs; they come from the same districts in the Baltic. The Northern and Scotch pines are often called for; the timber is used for the same purposes and the quality is similar to spruce, from which it is not easily distinguishable, except by the absence of resin ducts.

---

The annual meeting of the Brtish Columbia Loggers' Association was held recently at Vancouver. Officers for the ensuing year were elected as follows:—President, J. M. Dempsey; Vice-President, I. A. Bearce; Secretary-Treasurer, James R. McGrath (re-elected); Directors—J. M. Dempsey, A. P. Allison, D. J. O'Brien, F. C. Riley, of Bloedel, Stewart & Welch; Charles L. Koelche, International Timber Company; I. A. Bearce, of the Haslam Lake Logging Company; Judson F. Clark, of Clark & Lyford; A. E. Munn, Gordon Development Company; A. W. Mack, Prentice & Mack; C. W. Yapp, Squamish Timber Company; G. Hornibrook, Western Logging Company, and M. J. O'Brien, of Brooks, Scanlon & O'Brien.

---

The 18th annual convention of the National Hardwood Lumber Association will be held at Chicago on June 10th and 11th.

### Encouraging English Wood Using Industries

The weekly report of the Department of Trade & Commerce under recent date, referring to the wood trade of Great Britain during 1914 says:—No United Kingdom business has been more directly affected by the war than the timber trade, and the cessation or diminution of shipments of certain woods from the usual sources has caused many importers to look to Canada as an alternative source of supply, notably of railway sleepers, telegraph poles, pit wood, and structural lumber.

The general impression produced by the 1914 figures is that while the returns show a falling off in comparison with 1913, the result is surprisingly good when it is borne in mind that imports in that year constituted a record, and the stagnant effects of an overloaded market which prevailed during the first half of 1914 were succeeded by the transportation and financial difficulties resulting from the war.

This latter feature is accentuated by the fact that the bulk of the imported wood reaches this country in the summer and autumn, and that the German declaration of contraband had hindered consignments from Sweden which otherwise would have filled part of the deficiency.

A practical feature of the campaign which the Commercial Intelligence Branch of the Board of Trade has been conducting in the interests of British trade, is the holding of so-called "exchange meetings" of manufacturers and buyers.

It has been found that both British manufacturers and merchants have been importing from Germany and elsewhere materials which—if even to a lesser degree—are produced in this country, and one object of these conferences is to bring buyers and sellers togther at a time when such co-operation is advantageous. It is also hoped that as an outcome of the present situation. British manufacturers will commence the production of certain goods which have previously only been obtainable from Germany and Austria, and such manufacturers are invited to attend these business meetings at which facilities are available for them to exhibit and introduce their goods to buyers.

Each of these exchange meetings is devoted to some special branch of trade. They last two or three days, and upon the conclusion of the London meeting which takes place in premises which the Board of Trade have recently leased for the purpose, each exhibition is moved to the principal provincial cities, usually with the co-operation of the local Chamber of Commerce, and other commercial bodies.

#### The Manufacture of Bentwood Furniture

The first two meetings were devoted respectively to toys and electrical supplies, and the most recent is connected with the inauguration of the manufacture of bentwood furniture in the United Kingdom.

This has always been a special Austrian industry, and in addition to the regular demand for this furniture which has been established in the United Kingdom, large quantities are sent to other countries most of which are consumers of British goods, the total export trade from Austria amounting to £505,600 in 1913.

With the total cessation of Austrian supplies, some of the furniture manufacturers are desirous of not only securing the British trade, but supplying bentwood furniture of the Austrian type for export purposes.

Upon visiting the exhibition, it was found that probably a dozen manufacturers, mainly from High Wycombe, have commenced the manufacture of bentwood furniture and were showing the most popular types of Austrian chairs and stools. In certain cases there are deviations from the Austrian methods, but the goods look well and the workmanship appeared to be excellent.

At the same time the prices are considerably above those at which Austrian goods are ordinarily laid down in this market, the advance ranging from a quarter to one-third or even more. Manufacturers attribute this mainly to cheap Austrian labor and to the increased cost of timber in this country in comparison with the cheap supplies available in Austria. Another reason is that the industry is an entirely new one in the United Kingdom, whereas for many years operations have been conducted upon a most elaborate scale in Austria, enabling all possible economies to be adopted.

Manufacturers state that they have taken up the production of these goods in the hope of being able to supply a definite want, but that the future development depends entirely upon the encouragement given by buyers both for home and export.

Incidentally one of the manufacturers mentioned the large demand existing at the present time for birch and the difficulty in obtaining supplies. His firm could place a large order for logs with Canadian shippers, and would be glad to receive quotations.

---

Reports from New Brunswick state that heavy snow falls early in February made it possible for lumber operators on the Nashwaak, Miramichi and other rivers in central New Brunswick to finish up their season's work earlier than expected. There was at that time about a foot and a half of snow on the Upper Nashwaak and conditions for hauling were excellent. It was then expected that by the third week in February most of the operators on the Nashwaak would have finished their season's work.

## Canada's Exports and Imports of Forest Products

Canada's trade in forest products for the twelve months ending with November 30th, 1914, amounted in value to $41,954,640 in the three previous years, the totals were as follows:—1913, $42,875,089; 1912, $43,112,393; 1911, $40,654,422.

Imports of wood and manufactures of wood into Canada for the twelve months ending November 30th, 1914, were as follows:—from United States, $17,042,577; from the United Kingdom, $418,080; total, $18,075,423. For the twelve months ending November, 1913, the total was $27,137,253.

Imports of dutiable goods included sawed boards, planks, deals, planed or dressed on one or both sides, when the edges are jointed or tongued and grooved, to the amount of 28,430,000 feet valued at $517,205.

Imports of wooden doors during the year were valued at $482,632. Imports of mouldings were valued at $155,446. Imports of veneers of oak, rosewood, mahogany, Spanish cedar and walnut, not over 3/32 of an inch in thickness were valued at $227,752. Other imports of veneers of wood not over 3/32 of an inch in thickness were valued at $58,226. Woodpulp was imported to the value of $404,561.

Canada's exports of paper during the twelve months ending March 31, 1914, were valued at $12,690,549. During the previous year the value was $6,341,088.

Canada's exports of products of the forest during the year ending March 31st, 1914, with a comparison of similar statistics for the previous year were as follows:—

| | Twelve Months Ended March 31, 1913 | | Twelve Months Ended March 31, 1914 | |
|---|---|---|---|---|
| | Quantity | Value | Quantity | Value |
| Ashes, pot and pearl ... Brl. | 550 | $ 25,437 | 434 | $ 19,218 |
| Ashes, leached | ..... | 1,957 | ..... | ..... |
| Ashes, all other | ..... | 34,746 | ..... | 29,644 |
| Total, ashes | ..... | 62,140 | ..... | 48,862 |
| Bark for tanning ... Cord | 5,802 | 29,842 | 4,833 | 25,577 |
| Firewood ... Cord | 16,700 | 49,419 | 16,403 | 49,608 |
| Knees and Futtocks ... No. | 14,139 | 20,597 | 30,526 | 33,404 |
| Lathwood ... Cord | 895 | 3,392 | 72 | 258 |
| Logs, cedar, capable of being made into shingle bolts | ..... | $ | ..... | $ 376,046 |

Exports of wood pulp chemically prepared during the twelve months ending March 31, 1914, amounted to 1,515,633 cwt., valued at $2,923,083. In the previous year the totals were 1,112,457 cwt., valued at $2,100,842. Exports of mechanically ground wood pulp during the twelve months ending March 31, 1914, amounted to 4,816,170 cwt., valued at $3,441,741. During the previous year the totals were 4,749,719 cwt., valued at $3,408,702.

## Western Retailers Annual Meeting

The twenty-fourth annual convention of the Western Retail Lumbermen's Association, was held in Winnipeg on February 17th, 18th and 19th. Over one hundred members were present from Manitoba and Saskatchewan, and all evinced a live interest in the proceedings.

Officers and directors for the ensuing year were elected as follows:—President, W. D. Galvin, Winnipeg; Vice-President, H. E. Melicki, Saskatoon. Directors, Manitoba: A. K. Godfrey, Winnipeg; W. Thorn, Winnipeg; R. J. Gourlay, Winnipeg; A. B. Estlin, Melita; A. R. McDiarmid, Brandon; J. A. Playfair, Baldur; D. E. Fraser, Kenton; Thomas Sparks, Grandview; Saskatchewan: A. J. Ross, Salvador; J. Mergens, Weyburn; G. C. Ingram, Moose Jaw; F. J. Carpenter, Yorkton; F. H. Gardner, Morse; A. N. Winters, Aberdeen; J. E. Walker, Rocanville; C. Campbell, Forget.

A. B. Estlin, of Melita, retiring president, presided over the proceedings until the election of his successor. The annual meeting of the Retail Lumbermen's Mutual Fire Insurance Company was also held, reports being submitted and officers elected.

## Pulp and Paper Men Elect New President

Mr. I. H. Weldon, of the Provincial Paper Mills Company, of Toronto, is the new president of the Canadian Pulp and Paper Association, which elected its officers for the present year at the close of the second annual convention held at Ottawa recently. The other officers are: J. H. Acer, of the Laurentide Pulp and Paper Company, Montreal, vice-president; Roy Campbell, editor of the Pulp and Paper Magazine, Montreal, secretary-treasurer; Executive Committee, A. G. Campion, of the Belgo-Canadian Pulp and Paper Company, Shawinigan Falls, Que.; Carl Riordon, Riordon Pulp and Paper Company, Montreal; K. L. Warren, River du Loup Paper Company; C. Howard Smith, Howard Smith Paper Company, Montreal; G. L. McGlashan, Beaver Board Company, Thorold, Ontario.

## An Important Quebec Legal Decision

An interesting legal case was decided recently by the court of Review sitting in the city of Quebec, in the case of Tremblay v. Baie Saint-Paul Lumber Company. The result of the decision of the court is that lumbering is to be considered as an industrial and manufacturing operation, and consequently subject to the Quebec Industrial Accidents' Act.

Mr. Lavoie, a logger, when returning to the camp on a dark and rainy nght, after his day's work, came to a river 25 feet wide, where the bridge had been carried away by the high water during the day. "Searchers" sent from the camp, having seen him, threw a tree across the river so as to form a bridge, as is customary under such circumstances. Lavoie attempted to cross, but the tree broke down and Lavoie was carried away by the swift current and drowned. His widow took an action against the lumber company by which he was employed, claiming $3,025 damages for his death. The Lower Court dismissed the action on the following grounds: (1) Because the accident occurred through the gross carelessness of the deceased; (2) because the accident did not occur in the course of or resulting from his work; and (3) because the victim of the accident was not, on account of his work, a workman subject to the Industrial Accidents Act.

The evidence submitted showed that all the customary precautions had been taken to take Lavoie safely across the river, and that neither he nor the "searchers" were at fault on that account. As to the second point, the Court held that the time occupied by an employee in returning to camp after his day's work, instead of sleeping in the woods, was part of his work within the meaning of the Act, as the lumber company, as usual, was providing a camp where all its employees were fed and housed for the night. As to the third point, the Court held that, although some parts of the lumbering industry, such as cutting down and hauling the trees, are in the nature of an agricultural operation, logging and sawing, or preparing the lumber for use change the nature of the operation, which then becomes industrial and manufacturing. Such was the case in Lavoie's case, and the accident of which he was the victim was one to which the Industrial Accidents Act applied. The deceased workman's widow was consequently entitled to an indemnity in a sum equal to four times his average yearly earnings. Judgment was therefore entered for $2,000 damages and $25 for funeral expenses, and the company sentenced to pay said sum with interest and all costs.

## An Important Lien Law Judgment

A judgment recently given by Judge McInnes, is to the effect that logging camp workmen in British Columbia who may have liens can collect only on those logs that they can identify. This is the first time such a point has come up, and will doubtless be taken to an appeal, since it will be far-reaching in its effect. The decision was given in the case of Dyuguroff and seven other loggers against J. J. Denman and William Symes, owners of timber limits at Hoaltham Sound, and Barney & Cardieff, contractors, who were employed to cut shingle bolts. The contractors hired the plaintiffs and fourteen others and agreed to pay them so much per cord. The men worked during October, November and December, and when no money was forthcoming on January 1, they put a lien on the bolts in the camp, which comprised only the December cut, the other bolts having been sold. The lien covered the plaintiffs' claim for wages during the whole of the time they were working and was plastered upon the whole camp, affecting work done by the different gangs.

The judge held that loggers could claim only on the logs which they themselves could identify as having cut and could not claim on logs cut in one month for their claims covering logs cut in previous months and which had been shipped out and sold, even though they had been cut under the same contract. The judge further held that this applied not only to loggers but also to the camp cooks and others, who could only put a lien upon logs then in the camp and which had been cut by the men for whom they were cooking.

---

A meeting of spruce lumber manufacturers of the provinces of Manitoba and Saskatchewan was held at Winnipeg recently for the purpose of discussing various phases of the trade situation. Among the companies represented were the Finger Lumber Company, The Pas, Man.; the Prince Albert Lumber Company, Prince Albert, Sask.; the Ladder Lake Lumber Company, Big River, Sask.; the Red Deer Lumber Company, Barrows, Sask.; T. A. Burrows, Grandview, Man.; the Saskatchewan Lumber Company, Crooked River, Sask., and the Great West Lumber Company, Green Bush, Sask. These companies all reported that their operations during the winter have not been large.

---

Mr. James W. Sewall and Mr. James A. Conners, of Old Town, Me., have recently been in New York State as expert witnesses in the case of the International Paper Company vs. Rockefeller.

## Edmonton's Fine New Sawmill

The North-West Lumber Company has now nearing completion at Edmonton, Alta., one of the largest and best equipped sawmills in Canada west of the Great Lakes. The company is one of the main enterprises in which J. D. McArthur, president of the Alberta & Great Waterways and Edmonton, Dunvegan & British Columbia Railways, is interested. The two roads now building northward from Edmonton into the Peace River country tap the great basis of the Athabasca and Peace Rivers, which have large areas of standing timber. Though the country is well wooded the timber valuable for lumbering purposes is considerably scattered.

By establishing a sawmill at Edmonton, where these two railways have their beginning and from which the Canadian Northern Railway also runs northward, it is believed it will be possible to bring saw logs from all points in the wooded country which these roads tap to Edmonton. From that point the lumber can be distributed throughout the prairie Provinces to the eastward.

A large quantity of the spruce timber in the Athabasca region is in clumps too small to warrant the establishment of a mill in their vicinity that can be operated at a profit. By the establishment of a mill at Edmonton all spruce timber within hauling distance of the Edmonton, Dunvegan & British Columbia or the Alberta & Great Waterways in the country which they pass through will also become available to furnish lumber and ties for the railway. Handled otherwise it would prove unprofitable, if not go to waste altogether.

The mill and its machinery stand on concrete foundations. The machinery is of the very latest type, having in view speed in cutting and saving in power, waste and manual labor. Besides the sawmill a two-storey planing mill has been erected. Two brick power houses have been completed. One of these contains four boilers to generate power for the 700 horse-power engine that will drive the mill. The second power house contains a 350 horse-power engine and two boilers and will generate electric light for the mills, railway works and residences and furnish power for all parts of the plant except the sawmill itself.

The mill itself is 125 x 56 feet, part two storeys and part three storeys high. The sawing machinery is on the upper floor. It includes two double cut band saws, a band resaw and two edgers. The logs are delivered from the railway to an artificial pond, 350 by 100 feet, 6 feet deep, and are taken from the pond by a jack ladder. Two logs will be sawn at the same time. From the edgers the lumber is transferred on rollers to small cars on which it is taken to the piling grounds close to the railway tracks.

Besides the belt of territory along each side of the railways within hauling distance, from which supplies of logs can be drawn, the various floatable streams crossed or touched by the lines will widen its reach according to the condtions along each area. Logs can be floated down the Athabasca and all its tributaries, which include the Pembina, the Macleod, the Baptiste and dozens of smaller ones. At Smith, where the railway crosses, the various drives can be boomed and there loaded on to cars. The same is true of streams putting into Lesser Slave Lake, whose outlet reaches the Athabasca just below Smith. It is also true of the Athabasca River and its tributaries in the territory between Athabasca Landing and Fort McMurray and also of the Clearwater above McMurray, which has a large amount of valuable timber along its course.

Under modern conditions of sawing, with waste eliminated to the finest point, it is possible to haul logs economically by rail, which was not true in the days of the circular saw. With such an immense territory to draw from and with cutting and marketing conditions so favorable it is a certainty that the industry will be permanent for many years.—American Lumberman.

## The Proposed Freight Rate Increases

The increases in freight rates upon lumber, wood pulp, pulpwood and cordwood, which the eastern Canadian railway companies are seeking to have sanctioned by the Railway Commissioner are as follows:—

| Lumber and Wood Pulp | |
|---|---|
| 15c. or lower | ½c. |
| Over 15c. but not exceeding 25c. | 1 c. |
| Over 25c. but not exceeding 35c. | 1½c. |
| Over 35c. but not exceeding 45c. | 2 c. |
| **Pulpwood and Cordwood** | |
| 7½c. or lower | ¼c. |
| Over 7½c. but not exceeding 12½c. | ½c. |
| Over 12½c. but not exceeding 17½c. | ¾c. |
| Over 17½c. but not exceeding 22½c. | 1 c. |
| Over 22½c. but not exceeding 27½c. | 1¼c. |

---

Charles T. White, one of the extensive timber land owners and operators of the Maritime Provinces, died recently at Sussex, N.B., aged 76.

## New Brunswick Seeking English Wood Block Trade

The possibility of furnishing timber for paving blocks to be used in Great Britain is being enquired into by the New Brunswick Department of Agriculture. Mr. J. B. Daggett, secretary of Agriculture, recently visited England and made enquiries into this matter. Soon after his return he addressed the St. John Board of Trade and referred to this subject. Subsequently he received enquiries from London dealers for particulars. Mr. Daggett then wrote to several interested parties in Great Britain for information as to the quality of wood used. In reply he received the followng letter from the chief engineer of the city of Westminster:—

Dear Sir,—I am in receipt of your letter of the 8th instant, and shall be pleased to see Mr. Sumner when he arrives in England.

You enquire as to the kind of wood used. The wood which is most generally used and which appears to be an entirely satisfactory wood for paving is red or yellow pine, as generally termed in the market here. This is a product of the northern pine (pinus sylvestris) and a product largely from the Baltic and the White Sea. The slower grown timber of the White Sea district is on the whole most satisfactory.

At the same time, in the past Canadian spruce has been used. It is not so satisfactory as red deal, but might be used at a price, when the market conditions make red deal of the class desired difficult to obtain at an approved price. Moreover, I am, and I think municipal engineers generally are, open to consider any timber which is likely to give results equal to those of red deal.

I am now specifying for the first time Canadian cedar and the Oregon pine. Cedar has not been used in this country to my knowledge, but it seems to me, from an inspection of a few blocks, that its nature, specific gravity and preservative absorbing qualities may show it in use as satisfactory. Oregon pine has not been used and I fear that its lack of resiliency and higher specific gravity, as compared with deal, may make against it in use, apart from the fact that it does not seem the character of wood likely to take a preservative of advantage.

Birch and beech have both been tried in the past and found unsatisfactory. Maple, I think, also would be likely to take a preservative to advantage.

If you can arrange with your Government to send over samples of the timber and have them cut and creosoted here, I would be pleased to put them down in the street and see how they stood the traffic. But I may say that this Council has, since its inception, refused to be at any cost with respect to purchasing new paving materials, and in some cases has even refused to put them down unless the applicants deposit a sum to provide for the reinstatement of the ordinary paving in case the experimental material failed.

Sufficient blocks of each kind should be sent to pave an area not less than 30 square yards; the depth of the blocks should be 5 inches measured along the grain; the width 3 inches; and the length of the block 8 or 9 inches. You will gather that the grain of the wood should be vertical when the block is laid in position in paving.

## Predicts Permanently Higher Spruce Prices

A despatch from Boston, Mass., under recent date states that prices of lumber to-day are lower than they ever will be again, attention being particularly drawn to the fact that the consumption of eastern spruce for house frames is likely within the next 25 years to exhaust the available supply. One of the leading eastern operators in spruce, Mr. B. James, of Boston, who has been in the timberland business in England and Canada for over fifty years is an authority for the prediction that the available supply will disappear in 25 years. Another prominent timberland owner, Mr. Frank J. D. Barnjum, of Lynn, Mass., who has devoted much of his time to studying this matter recently expressed himself as follows:—

"After 22 years of the closest devotion to the timberland end of the business, I have no hesitation in going on record as stating that lumber will never again be as low as it is to-day. The relief which was expected from the Pacific Coast has now been dissipated from two causes.

"In the first place, lumber which has been landed on the docks here at a price of $25 a thousand has been sold at an actual loss to the manufacturer. From this time on we can expect but very little, if any lumber from this source, owing to the very high rates paid for European freights, which are attracting everything afloat to the foreign trade, so that we shall be dependent upon New England spruce for our New England markets, as what little spruce Canada and the Maritime Provinces have to spare finds a ready market here. This, together with the fact that the cut has been unusually light, means very much higher prices for lumber in the spring than those now prevailing.

"Additional reasons for an advance in the price of lumber are that spruce in Germany, long before the war was even thought of, was selling for $25 a thousand on the stump, which is about the price the manufactured article is selling for here, and that within the next 25 years we shall be in the same position that Germany was in then, that is, raising our own timber from seedings, owing to the by that time total exhaustion of our virgin or nature planted forests. There is no possible result but a general advance in the price of lumber up to that point.

Therefore, I have no hesitation in saying that lumber will never again be as low as it is to-day. The labor situation certainly will never be more favorable, as probably never in the history of this country will there be any more unemployed than there are to-day, and if the banks will do their part in advancing money to those who are prepared to build, we should have the greatest building boom that New England has ever known."

Mr. James in the course of a discussion upon the same subject said:—

"Build now means buy spruce now, and it is good advice, for spruce timber will probably never be cheaper than at the present. Spruce is harder to get every passing year, although at present it is the principal growth in northern New England and Canada. It will never be cheaper. The pulp and paper mills are absorbing large areas year by year. The growth is not equal to the demand.

"Spruce is certain to advance in price later in the season for several reasons—the cut is light this season in the forests, owing to dull markets, and money advances to operators were difficult to secure last fall; stocks in the hands of local dealers are much lighter than usual, so that when trade starts up again and all begin to buy, prices will advance several dollars a thousand feet. Visible stocks will be swept away in a few weeks."

Mr. James added that practically unlimited demand will come from foreign sources shortly, owing to the closing of various producing ports in the war zone.

## Maine and New Brunswick Operations

A report from Bangor, Me., states that the total cut during the present season on the St. John, Penobscot and Kennebec river waters will be in the neighborhood of a little over 400,000,000 feet. With the exception of the St. John river cut, which includes logs on both sides of the river, in Maine and New Brunswick, the cut shows a considerable falilng off from last season.

It is, however, larger than was anticipated at the first of the season, and the fact that conditions for hauling off have been particularly poor this winter, owing to the fact that there was no snow until the latter part of January, has had a tendency to increase the amount.

The total cut on the St. John river and tributaries above Van Buren will be a little in excess of 100,000,000 feet, according to figures which were submitted at the recent annual meeting of the Madawaska Log Driving Company, held at Van Buren.

A total cut of 46,500,000 is being made for the St. John Lumber Company, which has the largest lumber mill in New England at Van Buren.

For this concern, John A. Morrison, of Fredericton, N.B., is cutting 14,000,000 feet on the headwaters of the St. John river, and in the same general section Flavien Chouinard, of St. Pamphile, P.Q., is cutting about 9,000,000. On the Allegash river, J. T. Michaud, of Houlton, is taking out 8,000,000 feet; E. J. Potts, of Hartland, N.B., is operating to the extent of 14,500,000 feet on the Allegash; and Charles E. Jones, of St. Francis, is cutting 500,000 on the Little Black river. Arthur Noble, of Fredericton, has another small operation of about 500,000 for this same company.

The Stetson, Cutler Company of St. John, N.B., will have about 23,000,000 feet go down the river in the spring to their mill at St. John.

W. H. Cunliffe's Sons, of Fort Kent, are cutting 10,000,000 feet on the Allegash river for this concern. Arthur Noble is cutting 8,000,000 on Knowles brook and the main St. John, and Albert Currier, of Seven Islands, has an operation of about 5,500,000 around Seven Islands.

Randolph & Baker, who have a mill at St. John, are cutting 37,500,000 feet on the Little Black and about 2,500,000 at Quisibis.

Murray & Gregary, of St. John, N.B., will have 11,500,000 feet going to their mill in St. John. John Kilburne, of Fredericton, is operating for this concern on the Northwest branch of the St. John, and Flavien Chouinard is cutting the balance. Both of these operations are on the Canadian side of the boundary.

The conditions on the St. John at present are good for hauling off, but there is still not any too much snow, and the roads are pretty rough. Like all other sections of the State, the late arrival of snow has had a tendency to increase the lumber cut, the operators keeping the men at work cutting and yarding when they found that it was impossible to haul off without more snow.

The Madawaska Log Driving Company, which handles the logs on the St. John in the spring down to Grand Falls, where they are taken by the St. John Log Driving Corporation, held its annual meeting in Van Buren a short time ago.

James Crawford, of Van Buren, was elected president, and G. V. Cunliffe, of Fort Kent, secretary and treasurer. W. H. Cunliffe was elected driving master. While the water on the St. John river is low at present, Mr. Cunliffe, the driving master, says that this is no indication of poor driving conditions in the spring.

## Good Demand Continues for Canadian Stocks at London

Churchill & Sim, London, England, in their wood circular, under date of February 4th, report in part as follows:—The deliveries of wood during the month of January were some 1,600 standards in excess of those for January, 1914, entirely as the result of an increased overside delivery, although there was a reduction of some 8,000 tons in the quantity of wood tonnage coming to hand during the month from the northern ports and Canada, New Brunswick, etc. This seems to show the continuance of a strong demand, but also a natural disinclination on the part of merchants to land stock at the public docks, where, under present conditions, they cannot deliver to their customers or secure any return of their outlay for probably many months to come. This very old grievance is intensified this season through the general congestion of the port of London, the scarcity of labor, and the preference which must be given to Government demands in time of war, and for the time there seems to be no remedy. Fortunately, every month's delay has seen an appreciation in the values of stock, which will probably sufficiently compensate holders in the long run. Prices for all classes of sawn and planed wood available continue upwards, but, in view of the German prohibition of direct Swedish shipments to this country, transactions ahead have been narrowed down to dealing with the limited quantities procurable for delivery via Norwegian ports. There has been no general move among White Sea shippers up to the present, but, under existing circumstances, stocks from this quarter, especially of whitewood, should be easily saleable at high figures. The great difficulty which overshadows all markets is that of freights, and owing to the scarcity of steamers and the dangers attendant on running them, rates have again been put up from the already high levels reached at the end of last year.

There was no importation from the St. Lawrence during January.

From New Brunswick the imports were as follows:—

| | | | |
|---|---|---|---|
| Pine Deals ... ... | nil pieces | against | 3,000 pieces in 1914 |
| Spruce Deals .. .. | 287,000 pieces | against | 30,000 pieces in 1914 |
| Birch Planks ... | 1,000 pieces | against | 16,000 pieces in 1914 |

The feature of the importation has been the activity in St. John's and Halifax Spruce. In the absence of a competing supply a large forward business has been arranged at constantly increasing prices, for part of which freight quotations are doubtless responsible. There has been more enquiry for pine deals during the month, and prices of the lower qualities have improved in sympathy with every other description of stock.

British Columbian and Oregon pine.—A keen demand has considerably reduced the stock of Oregon pine, and prices have again risen slightly. The wood is in far more general use owing to the war, and bids fair to maintain its improved position in that respect in the future.

## Better Enquiry for Canadian Stocks at Liverpool

Farnworth and Jardine, Liverpool, Eng., in their monthly wood circular under date of February 1st, report as follows:—The business of the past month generally was of a quiet character, and with the exception of an active enquiry for spruce deals and some other soft woods the demand restricted. The consumption, however, largely exceeded the imports, thus making inroads on stocks, which are now moderate, and in the aggregate considerably below the large stocks held this time last year. Values all round are strong, with an upward tendency, and in some instances rule exceedingly high. For ocean freights, extreme rates are demanded, and tonnage difficult to obtain.

Canadian woods.—Pine timber.—No arrivals; improved enquiry, but deliveries small; values are firm; stocks are adequate. Waney pine.—First class: There has been more enquiry, but the deliveries were disappointing, and stocks are sufficient; values steady. Second class: Very little enqury. Square pine.—The demand is very restricted. Red pine.—No sales reported. Oak.—The demand is quiet, and stocks, although not heavy, are sufficient; prices are firm. Elm.—Light consumption; moderate stock is firmly held; prices are firm. Pine deals.—Small import; improved enquiry, especially for the lower grades; deliveries were more satisfactory; stocks are moderate, and prices firmer. Red pine deals.—No arrivals; moderate consumption; stock is light, and values have improved.

New Brunswick and Nova Scotia spruce and pine deals.—The import to the Mersey (including Manchester) during the past month amounted to 3,175 stds., against 2,410 stds. during the corresponding month last year. There was active demand; deliveries satisfactory, and stocks are light; prices further advanced, and have reached record values. Ocean deal tonnage is difficult to obtain, and rates extremely high. Pine deals are in moderate request; stocks are light, and values firm.

Birch.—Logs.—No arrivals; deliveries moderate, and stocks are light; fresh wood is in better demand at higher values. Planks.—Light import; numerous deliveries, and stocks are considerably reduced; prices are firm.

British Columbia and Oregon pine.—None imported; the deliveries were small, and stock is adequate; values firmer.

## Quebec Forestry School's Progress

The bill amending the Quebec Cullers' Act has been read a third time in the Legislative Council. The bill permits graduates from the Quebec Forestry School to exercise the profession of culler, the Legislative Council adding an amendment to the effect that such graduates must have served a three years' apprenticeship in a sawmill.

The Hon. N. Perodeau, in moving the third reading, gave some details of the Quebec Forestry School, founded in 1910 by the Hon. L. J. Allard, Minister of Lands and Forests, who obtained an annual grant of $5,000. The director of the school is Mr. G. C. Piche, chief of the forestry service, and the sub-director is Mr. Marcil, civil engineer, who teaches mathematics and drawing. The school was opened in September, 1910, with 21 pupils. Since then, the number of students has increased to 35, of whom 23 are bursars. In 1912, 7 students were given diplomas as forestry engineers. One of them entered the forestry service of British Columbia while the other six entered the forestry service of the Province of Quebec and are still working as district inspectors. In 1913 there were nine graduates and in 1914 ten, which gives a total of 26 forestry engineers who have graduated since the foundation of the school. Eighteen of these are employed in the forestry service of the Province of Quebec. Mr. Perodeau pointed out that with 130,000,000 acres of forest lands in the province, the work of classification and exploration necessitated the employment of a large number of agents each year. The work of reforestation was also becoming very important. There was a large demand for forestry engineers as, of the two hundred lumber firms in the Province of Quebec, only seven of them had succeeded in securing the services of forestry engineers.

---

A despatch from St. John, N.B., states that not for sixteen years has there been as much activity handling lumber at the Intercolonial Railway termnus in this city. Very large quantities of deals are being brought in by rail and transferred to scows to be taken to waiting vessels for shipment to the old country. This business will continue active during the rest of the winter and spring, if vessels are available to carry the cargoes. Several more square rigged vessels have arrived, as it is almost impossible to secure steamers.

The condition of the lumber trade continues unchanged, with a very active demand and high prices in Great Britain and practically nothing doing in the American market. The weather continues favorable for the lumber operators in most of the Province, although in the southern part the weather has been mild with some rain, and has interfered to some extent with log hauling. This promises to be an unusually good year for the lumber operators of New Brunswick and Nova Scotia.

---

The board of trade of St. John, N.B., has received an inquiry from an American firm as to the quantity of white birch in New Brunswick which might be available for the manufacture of spool wood. There are very large quantities of this wood in the Province, and at one time a considerable spool wood industry existed on the Miramichi. There are sections of the Province which have lately been opened up by railways, and other sections more distant from railway communication but adjacent to streams, where there are splendid forests of birch, maple and beech not yet tapped by the axe. It has been urged over and over again that industries using this raw material should be established, but the necessary capital and enterprise have not been found.

---

## Liverpool and Manchester Stocks

John E. Moore & Company, Limited, St. John, N.B., furnish the following sepoht on stocks, etc., at Liverpool and Manchester on January 31st:—

**Spruce and Birch**

Month Ending, 31st January, 1915

**Liverpool**

| | Import. | | | Consumption. | | | Stock. | | |
|---|---|---|---|---|---|---|---|---|---|
| | 1913. | 1914. | 1915. | 1913. | 1914. | 1915. | 1913. | 1914. | 1915. |
| N.B. & N.S. Spruce & Pine, Stds. ... | 1,880 | 1,660 | 1,550 | 3,040 | 2,650 | 3,140 | 2,590 | 6,740 | 2,930 |
| Birch Logs, Loads | 60 | 60 | 0 | 140 | 220 | 80 | 780 | 140 | 60 |
| Birch Planks, Stds. | 152 | 97 | 18 | 127 | 382 | 436 | 697 | 612 | 455 |
| **Manchester** | | | | | | | | | |
| Spruce, Stds. .. .. | 2,380 | 750 | 1,625 | 1,650 | 4,280 | 3,000 | 8,350 | 14,310 | 6,055 |
| Birch Logs, Loads | 0 | 100 | 0 | 20 | 140 | 140 | 440 | 300 | 500 |
| Birch Planks, Stds. | 18 | 36 | 12 | 48 | 127 | 152 | 509 | 479 | 491 |

**Stocks in Manchester and Liverpool Combined**

**Spruce**

## Personal Paragraphs

The business formerly carried on at St. John, N.B., by the late Geo. McKean will, it is understood, be conducted by his sons and former associates.

Mr. J. P. Dupuis, of the lumber and sash and door firm of J. P. Dupuis, Limited, and late candidate for the mayoralty of Verdun, P.Q., was recently entertained at a banquet, at Verdun, by a number of the citizens.

By a majority of 290 ex-Alderman Levie Tremblay has been elected Mayor of Maisonneuve, P.Q., defeating Mr. A. Michaud who had been mayor for four years. Mr. Tremblay is the owner of a sawmill and a sash and door factory at Maisonneuve.

Mr. J. I. Bennett, representing Messrs. Charles Boss & Company, Limited, Wood Agents and Importers, Bishopsgate, E.C., London, England, is now in Canada for the purpose of arranging for shipments of spruce and other lumber to England. His address is Royal Hotel, St. John, N.B.

Mr. C. O. Maus, of Atlantic City, N.J., who represents the Hyde Lumber Company, of South Bend, Indiana, visited Toronto last week, and reports having had an encouraging business trip through Ontario, during which he placed several good orders for his company's hardwood products.

G. C. Seibert, who was for some time head of the sales department for the Georgian Bay Shook Mills Limited, of Midland, Ont., has recently been appointed sales manager for the Schultz Bros. Company, Limited, of Brantford, Ont., large manufacturers of sash, doors, mill work and brick. Mr. Seibert is well known in the Canadian constructional field, having been secretary of the Ontario Sash & Door Association.

Hon. W. H. Cushing, of Calgary, Alta., ex-minister of Public Works for Alberta, recently visited Victoria, B.C. In the course of an interview Hon. Mr. Cushing said that he expected considerable demand for British Columbia lumber in the Western provinces this year. "The increased acreage, and the prospect for a good harvest for which we look should stimulate the demand both for British Columbia lumber and fruit" he said. "So far as the future of the former industry is concerned, it seems probable that the end of the war will lead to a great demand for material for reconstruction purposes in the areas devastated by the war."

## Victoria Harbor Company Loses Valued Employee

Many lumbermen in Ontario will learn with regret of the death of Mr. Philip Schissler, Victoria Harbor, Ont., who had been in the employ of the Victoria Harbor Lumber Company as yard manager for over thirty years. While he was passing a moulding machine in the planing mill, Mr. Schissler's coat caught in the belt and he was thrown violently to the floor. He suffered a number of serious injuries which resulted in his death a few hours later.

The late Mr. Schissler was greatly respected and beloved by his employers and by the large number of men under his charge. He was a man of generous heart, always ready to help those who were in distress and to show an interest in the welfare of all who came under his employ .

Readers of the Canada Lumberman will remember an interesting group photograph which was reproduced in our issue of August 15th, 1914, showing Mr. Philip Schissler and his five sons, all of whom were employees of the Victoria Harbor Lumber Company and had never worked in any other position, with the exception of one son who had recently taken a position as customs officer. The late Philip Schissler was of Philadelphia-Dutch origin. He came to Canada from Williamsport, Pa., to work for the Georgian Bay Lumber Company at Waubaushene and remained with them about twelve years. When the late John Waldie started the Victoria Harbor business, Mr. Schissler was appointed yard manager, a position which he retained until the day of his death.

## Abitibi Pulp and Paper Co. Present Good Report

It was stated at the annual meeting of the Abitibi Pulp and Paper Company, held recently at Montreal, that the profits for four months' operations were $174,092—a considerable proportion of ths comprising interest. After meeting interest charges on bonds and debenture stock, there was a balance of $47,968 to establish a profit and loss account, on December 31st last. The operating revenue of the company had so far been derived solely from the manufacture of pulp, which had been carried on since September at the rate of from 190 to 210 tons per day. Mr. F. H. Anson, the president, stated that the first two months' operations were carried on under difficulties and that the costs had been much higher than during the last two months of the year and in January. Present indications warranted the prediction that two paper machines would be in operation by May 1st, the third about July 1st, and the fourth in the early fall. The work of construction, Mr. Anson remarked, was progressing favorably. The company had been fortunate in its supply of pulpwood for the pulp mill. During the winter months the company will have distributed an amount in the neighborhood of $400,000 for pulp wood alone, among settlers. The board of directors was elected as follows: F. H. Anson, Alex. Smith, W. R. Stirling, Sir Thomas Tait, Hon. Geo. Gordon, G. E. Challis, Shirley Ogilvie, W. R. George, G. H. Kilmer.

## English Pitwood Supplies

The weekly report of the Department of Trade & Commerce under recent date, says:—Sir W. Schlich, Professor of Forestry at Oxford, writing in the Quarterly Journal of Forestry on "Forestry and the War," refers to the inquiry made by the Board of Agriculture into the supplies of pitwood for the collieries of this country, the result of which was that it was ascertained that 7,900,000 tons of pitwood existed in England and Wales, and 3,800,000 could be made available by extraordinary fellings. The latter quantity would meet the requirements for one year, while the total existing quantity would be used up in the course of two years, in both cases exclusive of stocks and future imports.

As regards imports, it was ascertained that, during September last, the actual amount came to 240,000 tons, whereas the normal September imports of former years came to 600,000 tons. The larger part of the September imports came from the west coast of France, in fact from the Landes. The imports from the Baltic were quite insignificant since the war commenced. Under these circumstances, arrangements were made to obtain pitwood from Canada, and it is believed that some supplies may be expected from February, 1915, onwards. Labor in Canada is very expensive, and it has not been stated what the supplies will cost per ton.

That being the case, says Sir William Schlich, we may well ask what would be the position if the war should last more than two years, as Lord Kitchener seems to consider possible, and what will be the effect on British woodlands at the end of it. Just imagine our position if half our coal mines, or even more, had to be shut down for want of pitwood.

## Opportunities for B. C. Lumber in Cuba

The weekly report of the Department of Trade & Commerce under recent date, referring to the market for British Columbia lumber in Cuba says:—Since the opening of the Panama Canal, exporters in the western United States have been looking to Cuba with deep concern; especially lumber merchants who are eager to enter the Cuban market taking advantage of the facilities that this important waterway will offer to the trade. Every effort has been made to interest Cuban dealers in British Columbia lumber with the result that satisfactory connections have been made and it is hoped that it will not be long before a trial order for Douglas fir will be placed with an important firm of British Columbia.

While this lumber is unknown in Cuba, a leading Cuban merchant, after investigations made from data provided, expresses the opinion that Douglas fir could be put to the same uses as yellow pine in a considerable number of cases, with the advantage over the latter that boards of greater length could be obtained and as the grain is not very different from that of spruce, it could enter the Cuban market as a strong competitor of yellow pine.

Considering that the annual import into Cuba of yellow pine amounts to more than 100,000,000 feet, it is evident that Cuba would open a valuable market to the lumber industry of British Columbia if the calculations made by the merchant referred to are accurate.

As the time appears propitious for an active campaign on behalf of Canadian exporters of lumber it is imperative that a few samples of Douglas fir and other merchantable woods of British Columbia should be forwarded at once so that the necessary steps may be taken to prepare the ground for future trade.

## B. C. Loggers Elect Officers

At the annual meeting of the Abitibi Pulp & Paper Company, which was recently held in Montreal, a very satisfactory financial standing was shown. Up to almost the last month of 1914 the plant of the company at Iroquois Falls, Ont., was still in its constructive stage. After meeting fixed charges a balance of $47,968 was carried over. The operating profits of the company during the year were derived solely from the manufacture of pulp. It is expected that the machinery for the manufacture of paper, now being installed, will be running in April or May and that this equpment will be considerably augmented during the summer. The board of directors elected for the present year was as follows:—F. H. Anson, Alex. Smith, W. R. Stirling, Sir Thomas Tait, Hon. Geo. Gordon, G. E. Challis, Shirley Ogilvie, W. R. George, G. H. Kilmer.

The Quebec Government have introduced a Public Health Act, one provision of which empowers the Health Board to order the employment of qualified physicians in lumber camps or among railway construction gangs. This is subject to the proviso that the employees must number at least 25 men.

## Opportunities for Canadian Pulp in Japan

The Canadian Acting Trade Commissioner of Yokohama, Japan, in a recent report refers to the critical situation in the Japanese pulp market arising out of the interference with the source of supplies from Scandinavia. Referring to the opportunity for Canadian pulp in Japan, the report says:—

The average quotations for European imported pulp before the war and at present are:—

| | Before the War. sen. | Present sen. |
|---|---|---|
| Bleached sulphite, 1st quality ... ... ... | 5.9 to 6.0 | 6.9 |
| Bleached sulphite, 2nd quality ... ... ... | 5.7 | 6.6 |
| Easy bleaching sulphite, 1st quality ... | 4.9 | 5.7 |
| Easy bleaching sulphite, 2nd quality ... | 4.6 to 4.7 | 5.5 |
| Strong sulphite, 1st quality ... ... ... | 4.6 | 5.3 |
| Strong sulphite, 2nd quality ... ... ... | 4.4 | 5.1 |

Prices ruling for Canadian pulp, which is considered to be of inferior quality, are somewhat cheaper. For instance, Easy Bleaching, first quality, which cost prior to the war about 4.6 sen per pound, is now offered at 5.2 sen. In this connection it has been stated by a large Japanese paper manufacturing company that the packing and grading of Canadian pulp does not appear to be properly attended to by Canadian pulp manufacturers, as it is not uncommon to find three or four different grades in one bale. This naturally distracts from the value of the pulp and should be especially brought to the notice of manufacturers.

The total import of pulp, coming mostly from Scandinavia, was last year 47,500 tons, valued at $2,100,000. Recently, however, schemes were set on foot by Japanese companies to supply a portion, if not all, of this import from home resources. Mills have been under construction in Karafuto, where there is a supply of lumber, and one of the mills has already commenced to turn out sulphite pulp of good quality.

Cargoes of sulphite pulp which were held up in August in British and Swedish bottoms have been arriving with pulp direct from Scandinavia, and it is estimated that a supply sufficient for three months is now on hand. It is possible that even during the war there may still be a direct import from Scandinavia of pulp in Swedish bottoms.

The same report states that the timber market in Japan is depressed. Fair stocks are in hand and there is now no difficulty as to imports whether from America or from the South Seas.

## Consumption of Wood in Ontario Industries

Leaving out of consideration the numerous industries engaged in the production of shingles, lath, ties, bridge-timber and rough lumber, there still remain at least thirty-eight different industries in Ontario more or less dependent on wood for their operations, and it is significant that even the makers of wood substitutes require wood in their process of manufacturing such. The exhaustion of Ontario's wood supplies, the depletion of which is already evident from the fact that over one-quarter of the total expenditure of $19,161,384 is paid for imported wood stock, would seriously cripple every Ontario industry.

Thirty-four different kinds of wood were used by these industries in the manufacture of everything in wooden produce from toys to threshing machines. Only eight of these woods had to be entirely obtained from outside sources, but, on the other hand, only six were entirely home grown. However, almost 90 per cent. of the three principal species, namely, pine, spruce and maple, which represented over one-half the total quantity used, were purchased in Ontario.

The sash and door industry easily takes first place among the wood-using industries, using 31.3 per cent. of the 807,456,000 feet, board measure, of rough lumber annually worked up by the one thousand two hundred Ontario manufacturers reporting to the Forestry Branch. The importance of this one industry will better be understood by comparison with the pulp industry, which although using 119,496,000 feet, board measure, of raw material, nevertheless was responsible for only 14.8 per cent. of the total consumption.

---

A New Westminster despatch states that at a recent meeting of the executive of the Fraser Valley Development Lague a resolution was passed that the secretary write to the Department of Trade and Commerce to secure information about the timber requirements of the British, French and Russian Governments. With this information the league will try and help the small lumberman of the Fraser Valley to get a foothold in these markets. The league was of the opinion that the large mill owners would know about this information and would be able to get some of the trade, while the small man would have nothing to do.

---

Mr. A. G. Rose, secretary-treasurer of the Estate James Davidson, is on a visit to Great Britain. He reports that the vessel on which he sailed, the Vaderland, was chased by a German submarine, when nearing the Irish coast, but was to quick for the enemy.

## The Short Length Problem

Lumber manufacturers are right now considering more seriously than ever before the problem of marketing short length stock, and they are going to continue until they find some way of disposing of the shorts and thus reduce the percentage of waste at the mill. It is a commendable undertaking, and one that deserves the hearty support and co-operation of the retailers. In some instances the manufacturers, when putting into effect some innovation in manufacturing lumber, have acted somewhat arbitrarily, so far as the dealers are concerned, and thereby aroused opposition.

The simple facts are: There is a serious unnecessary waste of forest products due to the fact that the public has never been educated to the value of short length stock for building purposes. We believe a majority of retailers would gladly carry short stock if there was a well defined demand for it. As the case stands, the dealers do not feel disposed to take the trouble of demonstrating to builders the merits of short stock. It would seem, therefore, that the first step necessary is for the manufacturer to reach the public in some way with the gospel of short lengths. That is the method followed by manufacturers in other lines. They go to the consuming public first and there create a desire and a demand for their product. Then they experience little or no trouble getting retailers to handle it.

This paper has pointed out in recent issues how retail lumber dealers could handle short length stock, make a good profit on it and supply their customers with superior material for such purposes as short stock can be used for if they carried it. Dealers interviewed on the subject say their greatest difficulty is to get the carpenters and contractors interested in using short stock, and right there is where the public-reaching publicity campaign of the manufacturers would do the work. Let the manufacturers prove to the public that a substantial saving can be effected by using short stock and the stubborn contractor and carpenter would have to yield.

Waste of any kind is wicked. A man hasn't any moral right to go into a restaurant and order twice as much food as he can eat, even though he is able and willing to pay for it, for the simple reason that it results in unnecessary waste. He had better find some way of getting that extra food, or the money he would spend for it, into the hands of some poor devil that is hungry. A man hasn't any moral right to buy a suit of clothes and throw it away, just because he has the money to do it with—he had better give the suit to some chap that cannot afford to dress decently. By the same token, the public, lumber manufacturers and retailers of lumber have no moral right to be parties to unnecessary waste of our forest resources. We put the public first, for the very obvious reason that it is the public that supplies the money eventually to pay for the lumber that is produced, and therefore in a sense, the greatest obligation to avert waste rests with the public—but before that obligation can logically be placed on the shoulders of the public, it becomes the duty of those more intimately familiar with the facts—the lumber manufacturers and retailers—to enlighten the public as to the actual value and utility of the vast quantities of lumber that is now going to waste.—Retail Lumberman of Kansas City.

---

Three interesting new catalogues have been issued by the Buffalo Forge Company, Buffalo, N.Y., describing their conoidal fans, their planoidal fans and their blowing, exhausting, ventilating, cooling and drying, electric fans. Bulletin 182E is a collection for convenient reference showing the various types of blowers and exhaust fans which are regularly built for direct connection to motors. This includes everything from large ventilating and drying fans down to the little baby conoidals for ventilation of moving picture booths, drying cabinets, etc. The catalogues are handsomely published and extensively illustrated. They will prove valuable and interesting to all who make use of electric fans.

---

The Universal Portland Cement Company have issued a very attractive calendar for the year 1915. A sheet is devoted to each month and each sheet contains forcible and interesting references to the importance of cement as a construction material. The color scheme and type of the calendar are very unique and attractive.

---

"The Life History of Lodgepole Pine in the Rocky Mountains" is described in an interesting bulletin (No. 154) issued by the United States Department of Agriculture, and prepared by B. T. Mason, assistant district forester. The bulletin gives a lengthy description of the distribution, characteristics, climatic requirements, reproduction, growth, etc., of the Lodgepole Pine.

---

A bill introduced into the Quebec Legislature by the Hon. L. J. Allard, Minister of Lands and Forests, provides for building storage dams on the St. Francis River, so as to control the waters of the rivers, its lakes and tributaries. This will give a constant supply of water to the various electrical plants, mainly for lumber and pulp industries.

## Work for the Dull Season

In a recent article I suggested a general course of action for the developing of closer social and business relations between the town and country communities, and urged the retail lumbermen to take the lead in agitating the subject in co-operation with the progressive business men and farmers, and formulating plans to carry out the idea in their respective localities. I am calling your attention again to it at this time because you have got the dull season of the winter with you, wherein to work up sentiment and action for whatever you and your associates may consider is best applicable to local circumstances and conditions. Knowing as I do the general conditions that prevail in the average country communities, I expect that this proposition will receive the gratified approval of its being a good thing if it could be carried out, and the large majority will, no doubt, dismiss the idea as being practically impracticable. This is because they have the old attitude of mind that is responsible for the present division of sentiment that has always prevailed between the country town and the farming community. They do not recognize the fact that conditions have so changed that in order to enhance and promote the prosperity of the country towns there must be a closer affiliation with the farming interests of their environments. But I believe there is more or less of a progressive element in every rural district. There are thoughtful minds on the farm and in the town who have thought of this same thing and recognize that something should be done to promote the closer co-operation in the social and business life of the two communities, and it is to this element that I have addressed myself because I know my suggestions in this regard will in their minds meet with a responsive approval. Perhaps, too, there will be a few who will believe in the idea strongly enough to impel them to talk it over with others and get them also interested, and together go to work and make plans for its practical fulfilment.

Naturally, I think more of the younger men in this connection than the older ones, but even among these there are as progressive minds as among those younger in years. One has a little more enthusiasm, perhaps, but the other has both enthusiasm and judgment. Temper this with persistence, and you have a combination that can do anything.

If it were not for the young and progressive men in the business, I believe it would become monotonous trying to interest the unresponsive element in the trade. It would be something like working on an old tough cottonwood stump with a dull axe. But every little while, however, I receive letters from retailers that encourage, and assure me that my efforts are not in vain, and when I think of the great changes in our associations and the splendid progress they have made, I know there is an increasingly progressive element in the fraternity of retail lumbermen that is worthy of, and responsive to, the efforts of the best minds in the country. I am more and more convinced that the constructive character of the retail lumberman's business makes of him the natural leader in all progressive movements in his locality, and in the awakening of the rural districts that is now going on, he will play a prominent part in the working out of the social and business problems. It is incumbent, therefore, on the young man, to prepare and fit himself to meet the responsibilities of the unfolding character of present and future business requirements. He must learn to deal with the town and farming communities as one community of interest. He must recognize and appreciate more and more the nature of his own business and its relation to that of the one community.

### Knowledge Gained From Experience

There are no night schools nor correspondence schools to learn this in. Such knowledge is acquired only by experience, observation and close study of its governing principles and the details of the various parts of the business. One great fault among our business men is the superficial character of the knowledge of the business they are engaged in. They know only the surface part of it, which is the reason why so many ultimately fail. Those who do succeed do so more on account of their disposition and ability to hang on to the pennies, but as far as knowing much about the goods they sell, or how to create business, or meeting scientific competition, they are not in the true sense masters of their business.

As I look back over all the years I spent in running a yard and compare what I know of the retail business with what there is to be learned of it, and what is necessary to know today, I can but confess that I have only a superficial knowledge of the business as it is developing at the present time. And because I realize this in my own case, I am urging the young lumbermen to get below the "grass roots" of their business and dig for all the knowledge they can obtain of it, and also those things in relation to it that can be made factors in its development. Every young retailer should be a student and study some particular thing about his business every day, and by getting into the habit of doing this, he will be a student all his life. It may be of some assistance to those inclined to do this, if I mention a few things on this line that will be suggestive in following it out still further.

In the first place, I will ask: What do you know about lumber other than that it is lumber, and you know how to figure the board measure and the prices of it? Of course, if you don't care to know anything more about lumber than to sell it, there is no need to do otherwise than what you are doing. But it is coming to be recognized as a vital requisite in good salesmanship that it is necessary to know all you can about the goods you are selling. Now you have got somewhere about a dozen different kinds of woods in your yard and there is not one of them but has a distinct character of its own, and therefore is different from the rest, and is better for certain uses than another. Is it not worth while to know this when a customer asks which is the best to use? Then again, there is a satisfaction in having the consciousness that you know something about lumber besides knowing how to sell it.

How much do you know about the using of lumber in the purposes it is bought for? A customer brings a long list of different sizes, lengths and kinds of lumber for you to figure out and give him an estimate. What do you know about what each item is for, where it goes in the building, and whether there is a sufficient quantity or not? If you have only a sort of a general idea, there are items in it that you can only guess what they are for, and you are at a disadvantage if you are figuring against a competitor who does know just where everything goes as well as the requisite quantity. And let me tell you, when you are figuring against mail-order-house competition, you are doing so against an estimator who knows all about what he is doing.

### Building Knowledge Essential

Once upon a time it was not wholly necessary for a lumber dealer to know anything about building construction. All he had to do was to figure on what was brought to him and trust to beating his local competitor, who was on a par with him in knowledge of the business.

With the introduction of an improved class of architecture in the country towns and among the farming population came elaborate plans, and specifications detailing every item about them. To the average retailer they are as an unknown language. He knows they are plans of a house or barn, and that is about all. So he has to depend on a contractor for the making out of a bill of items who may or may not be competent to do it. And, as perhaps several of such contractors will compete for the job, they severally make out their own bills according to their understanding of the plans. As a consequence, there will be as much variation in grades and quantities as in the knowledge of the different contractors of the details of the plans. The result generally is that the smallest bill is bought for the job. Now, what do you know about the plans and specifications of a modern dwelling house with its complex designs of rooms, stairs, bathroom and kitchen conveniences? You are out there in a small town where the contractors know but little more than you do about them. Do you know anything about providing the sewerage for one of these dwellings? If you haven't a good working knowledge of these things concerning a dwelling of this class, it is essential that you do, if you want to be able to advise intelligently about them to people who are thinking of building a better class of improvements. If you don't know, these people are going to seek for other sources of information. Whether you realize it or not, it is a fact, nevertheless, that in the country towns the lumber dealer is supposed to know all about building matters by the great majority of the community, and is the source of information to whom they naturally go when they are thinking of building, and the thing for you to do is to cultivate this supposition on their part by demonstrating that you do know what they believe you do.

### Other Things You Should Know

There are other things about building besides lumber and woodwork that you ought to have a practical knowledge of, such as stone, brick, plastering, painting and concrete work. You ought to be qualified to figure out an estimate from the plans of the quantities and cost of any of this kind of work without having to tell a customer to go somewhere else for his information, and in such work as plastering and concrete work you should be able to tell the proper proportions of materials in mixing them. In fact, there is nothing about the construction of a building but what you should know as well or better than the average contractor, even to the amount and cost of the labor necessary to build it.

This latter item may seem a little strong, but let me tell you what is a fact. The average contractor, in figuring the cost of labor in his estimate, doesn't figure out the day's work on this and that part of the building. He simply guesses at a lump sum which he thinks will cover the total cost of the labor, and then adds to this what he thinks should be his percentage of profit on the labor. If you want to verify this, just ask some of your contractors what the work would cost on several kinds of jobs, and then compare the estimates, and you will see one reason for the variation in the bids that

are given in for contract jobs. You have no idea till you get into it how interesting this kind of study is, besides being useful in your business.

There are several things about the construction of a common frame building that are very useful to know, such as the different pitch of roofs and the way to cut the rafters to get the desired pitch, or slant of the roof. It is not generally known, but the common carpenter's square is the most interesting and intricate of all mechanical tools used in construction. Whole volumes have been written about it and its almost infinite variety of uses. If you can get hold of one of these books, it will pay you to study some of the primary and simpler forms of its uses. It is very seldom you can run across a carpenter who knows little else about his square except that it is a measuring tool and a guide to cut out the visers and treads for the framework to stairs. Some of the older carpenters might possibly tell you a little more about it.

Figuring the areas of the different kinds of roofs, dormer windows and gable ends of buildings is another thing that is useful to know when estimating the amount of material to cover them. These and the area of a circle are something you should learn the rules for, and commit them to memory, for it often comes in handy to use them in figuring stuff for tanks, silos and cisterns, and as you don't always have a book nearby with these rules in, it comes handy to depend on your memory when you are up town or out in the country. People will often ask you questions about the cost of different things, and you ought to be able to figure out at the time the quantity of materials and the total cost of what they want to know.

Another thing about a building is the quantity of nails it will require. You ought to be able to make out the bill of hardware for most any common building, for you are often asked by customers how many nails it will take for the job they are buying the materials for. A good way to do is to make a note of questions of this character that are asked you, and make it a point to post yourself on them so as to be competent to give inquirers the information desired. Learn how many nails of the different sizes there are in a pound and that will help you to make an approximate estimate. This is about all that can be done, anyway, but by practice you can come pretty close to it.

### Get the Habit of Asking Questions

Get the habit of asking questions about anything you don't know of those who are supposed to know. I have learned most of my general information in this way, and when I was running a yard there was nothing I carried in stock but what I learned all I could about from experience, observation, reading and asking questions about it. A retail lumber yard is a great school of applied knowledge, and in proportion to the amount of application you put into its several departments, so will the degree be of your knowledge and mastery of the business of a retail lumberman. Furthermore, you have only yourself to depend on for this. Of your own volition you must get out what there is in you, for if you don't, no one else will. You have got to furnish the nickel and put it in the slot yourself in order to get anything out of life in this world. Some of you may say, "Where do I get the time to study on all these things you have mentioned and rightly attend to the affairs of the yard?" I can only answer this in a general way. It is common experience with us all that we can find time to do what we really want to do, and therefore, if you get into that attitude of mind towards these things, you will find the time will do what you can. If you love your work you will do more of it.

I am not saying this in the way of theorizing. There are some things I know, and I know that I know them, and this is one of the things I know, because I have done it. I know that a retail lumber yard is a busy place, and so is a working school. It was the best school I ever attended, and busy as I was, I generally found time to do what I wanted; not all, perhaps, that I would have liked, but I did what I could, and the same application can be used by any young man who is able to run a yard. A half an hour, an hour, can be saved out of the twenty-four by any young man for studying the things that will make him more proficient in his business. In order to do this, however, he must have within him as a driving force the devouring desire to know these things.

### Another Important Factor

It is becoming more strongly recognized that advertising is one of the most important factors in business. Most all of the great manufacturing and retail concerns make it a separate department of their business, and employ high-salaried experts to conduct it. Advertising has developed into a science, and while it is being applied as such in the larger circles of business, the principles that govern it may be learned and used by the smallest business man. If a business is worth anything at all, it is worth advertising. Failing to do this, business men are not getting all out of their business they could and should. The largest retailers in the city are the greatest advertisers, and I have noticed that the same rule applies, as a general thing, to the merchants in a country town. It must be said, however, that in many cases the results are not favorably proportional to the expense, and this is because the advertisers don't know how. Their advertisements are merely statements, and have not the "pulling" power they would have if they were inducements. And because of this fact, many business men don't see any use in spending money for advertising because it doesn't pay, and a large majority of the retail lumbermen are in this unbelieving class. The young men in the business are in danger of growing up in this belief also, and from the same cause.

I know this subject of advertising by retail dealers is an old one to write about. You read about it in every trade paper, and your local paper is all the while dinning at you to advertise, and you have got so you don't pay any attention to what they say because you are stuck in the belief that it doesn't pay. Now, my friends, I am not in the habit of writing about obsolete and dead things, and therefore in my remarks about advertising at this time, I am talking about one of the newest and livest subjects in the business world today. It is new, because of its rapidly developing character, and a live one because live men are deeming it necessary to employ it as an essential factor in their business. I believe that the developing nature of the retail lumber business will cause it to become in the same degree as essential to its life and progress. I am convinced that there are few things of more importance for the young retailer to study and become familiar with than the science of advertising. It is not to be expected, of course, that he can do more than obtain a fair knowledge of its fundamental principles, but with these acquired he will add to his knowledge through experience gained in their application. When it is borne in mind that the strongest competition the retailer is meeting today is expressed through the medium of advertising, the importance of it ought to be more generally recognized by him than it is. And as this is the strongest weapon used against him, it is a logical proposition for him to use the same instruments for defence. But he is unable to do this unless he knows how to effectively use it.

I would suggest and urge, therefore, that every young man in the retail lumber business who has the ambition to make the most of himself in his business take up this subject and make it a study during the winter months, and keep at it during the year also. I would particularly advise the study of the creative principles of advertising, and learn how to apply them in the writing of your ads, for what you need and are all the time looking for is a further development of your trade, and it has come to pass in many places that this can hardly be accomplished without resorting to the old methods of taking it away from competitors. Therefore, the only recourse without doing this is to go to work and create more business, and the best means through which you can do this is the use of creative advertising.

### It is a New Subject

I am well aware that I am urging the retailer to do something that in most cases is entirely new to them and the difficulty is what to do, and how to begin. It is as though you wanted to go to school and had no school master. You are out there in that little country town where there is nobody who knows any more about the science of advertising than you do yourself, and you are entirely on your own resources. You feel that in taking up the study of this subject you need assistance to start and guide you in what to do. There are some retailers whose natural talent for such things has enabled them to work out the problem for themselves without any particular outside assistance. These are exceptional cases, however, and the fact remains of the average retailer's need of assistance in this matter, and to these I would say there are a number of good books published on this subject that their reading and study would give a general idea of the theory of the science which the student can apply in his experimental ad writing. There are also a number of correspondence schools that teach it through a course of lessons at an expense within reach of any young man in possession of a job. Nearly every state university has a department now, that includes advertising among its special studies. You might obtain some assistance from this source. There is plenty of such help to be found for the seeking and if you really make up your mind that you want to know something of the science to enable you to write a creative advertisement and one with a "pulling" influence to your yard, you will have no serious trouble in finding ways and means to educate yourself on the subject.

To create a demand and induce the buying of lumber is the proposition that is becoming increasingly prominent to the retail lumber dealers and the greatest and most effective agency to deal with it is a knowledge of the science of advertising. The manufacturers are waking up to the urgent need for general action in the interest of maintaining the use of lumber for building construction which is being seriously threatened by the "substitute" interests. This will call into action a new feature of advertising which I will term "preservative" advertising. For this purpose there will have to be an earnest, intelligent co-operation of all branches of the industry. The retail lumber dealers will be expected to bear a prominent part in this new work and to better fit them for it I am urging them to study the subject of advertising in all its features.—C. H. Ketridge, in the Mississippi Valley Lumberman.

# WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted-Lumber

## Coal and Wood Yard

## Lease For Sale By Tender

Tenders will be received up to and including March 20th, 1915, for the lease of the premises, 13 Somerset Avenue, Toronto.

Sheds, buildings, etc., valued at .. $150.00
One 5-ton scales, valued at ... ... 150.00

$300.00

This yard has a frontage of 90 ft. by a depth of 132 ft., and has been operating as a coal, wood and lumber yard for a number of years.

The rent is $5.00 per month and taxes, which amount to about $150.00 per year, making a total rent of approximately $225.00 per year.

A good coal and wood business is done in the Winter, while in the past a good lumber business has been done in the Summer, mostly low grade lumber. A good location for a man with some capital.

The present lease expires two years from May 9th, 1915.

All tenders must be accompanied by a certified cheque for at least 10 per cent. of the tender, and the balance to be paid when the tender is accepted.

Possession can be had at once, or upon payment of a substantial deposit, premises will be held until the first of May.

Any further particulars will be furnished on application.

Highest or any tender not necessarily accepted.

All tenders must be submitted to W. J. McCoy, Assignee, 615 C. P. R. Building, Toronto.

### B. C. to Modify Timber Act

Something in the way of a moratorium is to be given B. C. holders of special timber licenses, a bill to modify the provisions of the forest act having been introduced in the legislature by Hon. W. R. Ross. The concessions are important and are to remain in force until March 31st, 1916. They are:

(a) In case the holder of any special timber license which has expired within one year prior to the passing of this act, or which may hereafter expire, fails or neglects to pay the renewal fee to the forest branch of the department of lands at Victoria within twenty-four hours after the date of the expiration of the license, then upon payment of the fee and an additional sum of five dollars within thirty days of the date of expiration of the license, or upon payment of the fee and an additional sum of ten dollars within ninety days of the expiration, or upon payment of the fee and an additional sum of twenty-five dollars within one year of the expiration, or upon payment of such fees as would have been payable had the license been kept in good standing and an additional sum, calculated at the rate of twenty-five dollars per annum, at any later date within the period during which this act remains in force, the holder shall be entitled to a renewal of the license.

(b) In case of any special timber license renewable under the provisions of the forest act, or under those provisions as modified by this act, the Minister of Lands may permit the renewal of the license for consecutive and successive periods of three months. The renewal fee in each case shall be one-quarter of the annual renewal fee which would otherwise be payable. If the holder of the license fails or neglects to pay the renewal fee within twenty-four hours after the expiration of the license, the sum payable by him for such renewal in addition to the renewal fee shall be one-quarter of the additional sum which would otherwise be payable therefor under this act.

(c) In case of any special timber license which expired since the first of August, 1913, and prior to the period of one year before the passing of this act, then upon payment of such fees as would have been payable had the license been kept in good standing, and an additional sum calculated in respect of the period elapsed since the date of its expiry at the rate of twenty-five dollars per annum, the Minister of Lands may permit the renewal of the license.

### Trade-Marks For Lumber

Many of the yellow pine men in Chicago are interested in the plan now being suggested concerning the adoption of trade-marks to be used in advertising their product. It is not unlikely that within a short time certain manufacturers will be inaugurating extensive advertising campaigns along this line. R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, is in favor of this method of merchandising lumber. He says that in his opinion the lumbermen have for years missed an opportunity to point out to the consumer the merit of certain species of lumber because of their failure to adopt individual trade-marks, which, properly exploited, would result in their product becoming as well known as any of the old and well-known patent medicines or even the familiar hair tonics or corn plasters. He says, for instance, that "Jones' 3-star non-warp bevel siding" might become as familiar and well known by judicious advertising as any of the ancient family remedies or any other commodity exploited in this manner. Others also are of the opinion that such a method soon will be adopted by lumbermen throughout the country.

### The Retailer's Profit

A. L. Porter, Secretary of the Western Retail Lumbermen's Association, hit the nail fairly on the head in a recent letter, in which he says: "I believe that the time is fast approaching when the lumber business—the retail end of it—should stand on its own bottom, and the contracting business should stand on its own bottom. I do not believe that a contractor should make a big profit on the material going into the job. All he has to sell and which he should make a fair margin on, is his time and brains to put the material together; and I believe that the government and the people and the manufacturers are going to insist that the retail lumbermen of this country reorganize their business in various places; put a fair margin of profit on the various items of material sold, and sell it for that price for cash; but those two prices should be given to any and everybody. If he wishes to make a larger margin of profit, he must render more service and do more work."

### French Tie Commission Coming

Word has been received that the Societe Anonyme des Etablissement Carrel Aine, Rouche et Cie, having headquarters at 55 Rue d'Amsterdam, Paris, shortly will send a commission to Canada and possibly the United States to investigate and report on tie supplies. The organization is the purchasing representative for French state railways. Co-incident with this announcement is an inquiry for from 1,000,000 to 5,000,000 oak ties; dimensions, 8½ ft. long, 9.45 in. wide and 5½ in. thick, prices to be quoted c.i.f. French and Italian ports, and ties to be inspected for acceptance before shipment. A bank guarantee will cover payment and a similar guarantee is demanded to insure delivery. It is understood that this inquiry comes from Zurich, Switzerland.

# Review of Current Trade Conditions

## Ontario

The volume of the lumber trade in Ontario to-day is unquestionably small as compared with the same time a year ago. The outlook is that there will not be a marked increase in the amount of trade, at least until greater elasticity is noticeable in the money market, as the large lumber consuming factor in Ontario trade is the housebuilding industry which is largely dependent upon loans. Under these conditions lumber used largely in housebuilding, such as hemlock and the lower grades of southern pine is feeling the dullness of trade more than other lines consumed by manufacturers.

The most promising section of the present demand is in those towns which are dependent mostly upon agriculture. In these places there is a little more activity than in places where manufacturing is the chief industrial activity. Although the farmers are expected to commence showing their money before long, they have not as yet given any strong indications of doing so.

Ontario lumber manufacturers are taking a more hopeful view of the trade situation since the announcement of a duty of 7½ per cent. on rough lumber, and an increase of 7½ per cent. in the duty on finished lumber. The opinion is widely expressed that this will be an important factor in preserving the Ontario markets for Ontario lumber.

Some enquiry is heard for lumber for export. Exporters are looking for Norway pine in fair average widths and lengths for immediate shipment to Great Britain. Uncertainty prevails about the probable demand for white pine for export, on account of the difficulty in securing reasonable freight rates.

Eastern spruce is practically off the Ontario markets on account of the favorable conditions in the export trade. The hardwood trade continues quiet and shows no changes of any importance.

## Eastern Canada

Local trade is very quiet at St. John, N.B., and there is no change of any importance to report. Prices continue firm and would stiffen if the demand improved to any extent. A good price is asked for the better grades of spruce deals for export. Present indications are that every deal will be moved by the time navigation opens. Ocean freight rates continue very high, 100s. per standard being the minimum. Stocks are commencing to move from all interior points. Portable mills are all in operation and the output from this source will be larger than it was a year ago. In the lower river districts there has been very little snow and hauling conditions have been poor. Prices of logs are higher than they were last year although it is difficult to say how long this will continue. Logs are selling at about $14 for deal logs and $10 for spruce battens, 8 in. and up, delivered at St. John. The large operators on the head of the St. John have cut about 25 per cent. more than usual, as woods conditions have been excellent. If the driving conditions are also good there will be a full season's sawing at St. John. At St. John the trade is very quiet. Factory work of all kinds is slow. A fair amount of house building however, is expected during the coming summer. Shingles continue quiet. Laths are selling at about $2.75 on the wharves at St. John.

A report from Boston states that quotations on eastern spruce, particularly on dimension have been reduced about 50c. The demand is slow. The increasing difficulty of obtaining vessels for shipments of spruce to England is reported to be resulting in heavier offerings in the eastern States. Some mills have orders booked ahead at $24. Random spruce is not too plentiful and prices are well maintained, 2 x 3 selling at $21; 2 x 4 at $22; 2 x 5 at $21; 2 x 6 and 2 x 7 at $20.50 to $21; 2 x 8, $22 to $22.50; 2 x 10, $23.50 to $24, and 2 x 12, $24 to $24.50. At New York the market for eastern spruce continues quiet.

The demand for hemlock at Boston is light. Some of the strong mills in the east continue to quote at $22 for the best clipped boards, 10, 12, 14 and 16 feet, but the current trade in good eastern boards is at about $20 to $21.

Shingles are slow at Boston, but prices are weak. Good white cedar extras are now offered at $3.40, the full range being $3.35 to $3.45. Clears are quoted at $3.80 to $3.90, and second clears at $2.50 to $2.65. The demand for lath is slack. 1⅝-in. is selling at $4.10 to $4.15. For 1½-in. the range is $3.70 to $3.75.

## United States

The business situation in the United States is steadily adjusting itself to the conditions resulting from the European war. It is noticeable that a great number of important industries have seen the necessity for resuming operations on a normal basis without waiting for a more definite turn to the war situation. In the lumber business, orders are increasing in volume and there is a fairly general feeling of confidence that in the early spring there will be a decided change for the better. An important and encouraging factor is the fact that money is plentiful and cheap for carrying on legitimate business. The volume of export business is steadily increasing. Railroad companies are gradually increasing their buying. The outlook for the railroads is excellent. No one expects a heavy amount of new construction, but practically all lines will be increasing their consumption of car material, ties, etc. Wood working companies in general are finding that trade is better than it was a month ago.

The yellow pine trade shows improvement. The railroads during the last few weeks have bought many million feet of southern pine. Varying reports are received in regard to the hardwood trade. Business however, is gradually increasing in volume and some lines show improved prices. This applies particularly to quartered and plain oak. Northern hardwoods are holding their own as to prices. Mill stocks are reported to be accumulating to a slight extent. Most of the northern hardwoods however, are in strong hands. Spruce is moving fairly well and improvement is reported in the hemlock market.

The northern pine trade at Buffalo continues on a small scale. Much improvement is not looked for in the near future, but better weather is expected to bring out a fair amount of business. Retail stocks are not heavy. Prices are steady. The low grades being strongest. A seasonable amount of trade is in progress at North Tonawanda. More box stock has been moved this winter than formerly, the demand being for ammunition boxes, crating and other purposes resulting from the war. It looks as though there will be a shortage of the poorer grades in the spring. Prices of box lumber are now higher than they have been for many months.

## Great Britain

The continued uncertainty in connection with the supplies of timber and the course of freight rates during the coming season is keeping down the volume of forward arrangements at London. Very little is being done at this season, which is usually a very busy time in this connection. The joinery makers are doing a fair amount of trade and the indications are that this will continue. The packing trade is also a large consumer at present. The building demand is very quiet. Values are well maintained at London with a continued tendency towards advance. The deliveries at London docks during the week ending February 6th amounted to 5,248 standards, as compared with 3,205 standards during the corresponding week of 1914. At Churchill and Sim's recent auction sale 3 x 11 third Quebec pine sold for £19 5s. and £19; third Montreal at £18, and fourth Montreal at £15 15s. 3 x 10 to 7-in. Montreal brought from £17 to £15 10s., while 3 x 9 red pine sold for £17; 8-in. for £16 5s., and 7-in. for £15 15s. Third Quebec spruce brought £16 15s.

At Liverpool, c.i.f. values for spruce deals are a little firmer than they were a fortnight ago. Transactions for forward delivery are small, on account of the scarcity of tonnage. It is reported that a prominent firm of ship owners recently refused £6 per standard freight on spruce from St. John and Halifax to the West Coast of Great Britain for a good line, stating that they had not any available room. Liner parcels during the past month have been greatly curtailed. Spot values are very firm and likely to stiffen. The demand is good, although there is no great rush of orders. C.i.f. values of birch are very strong, but the volume of business is light, particularly for forward delivery. Several liner parcels were recently sold at advanced prices and spot prices went up in sympathy. At Manchester, spruce is dearer and stocks are very low. Small cargoes were recently offered at about £16 c.i.f., of the usual average specification, based on a 90s. freight. A fair volume of business is reported at Glasgow. The demand for spruce continues strong. The small shipments arriving are quickly sold at good prices. Available supplies are not sufficient to meet all the requirements, and a disposition has been noticeable to make use of the cheap woods, such as low grade poplar for packing case material.

---

The Timber Trades Journal, London, England, in its issue of February 13th, says:—The present position has given a fillip to the Canadian timber industry from which the pine deal trade, like other branches, is benefitting; but as to what duration this improved state of things will extend is largely dependent upon the fluctuations of the Canadian freight market. There is no doubt that at present the demand for pine deals and boards has increased very much owing to the considerable advance in spruce and redwoods, which is likely to continue for some length of time.

View of Mills in Sarnia.

# BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

**SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD**

## Montreal Trade Feeling More Hopeful

Montreal, February 24th (Special to the Canada Lumberman): While there is no improvement in the turnover of orders, a more hopeful feeling prevails in the lumber trade. Some firms are basing their expectations of better business on a strong demand for the British markets, while others are looking to the United States. Locally, there is no sign of an immediate awakening in trade, as building will be light for three or four months at least. The representatives of two London firms have been making inquiries for immediate and later shipment of lumber, particularly of spruce. Some of this—clear spruce—is required for the Navy.

Questions of tariffs—federal customs and railway—have naturally occupied the attention of lumbermen. With regard to the former, inquiries go to show that the budget, in so far as it affects the lumber industry, has been well received. Lumbermen spoken to are decidedly in favor of the 7½ per cent. on rough and the extra 7½ per cent. on dressed descriptions. The opinion is that the tariff will keep out, to a certain extent, the poor qualities of Georgia pine which have been put on this market at prices representing a loss to the manufacturer, which made competition by Canadian grades impossible. The additional 7½ per cent. will, it is expected, make little difference to such woods as oak, poplar, etc., which we are practically bound to import from the United States. The consumer will of course have to pay, and will probably only regard it in the light of another war tax, temporary in its character.

The higher railway rates asked for by the companies are regarded from two points of view. One is that the companies are entitled to moderate increases, owing to the rise in the price of commodities, combined with diminished receipts. On the other hand, it is contended that the companies having participated in the good times, must bear their share of the bad times, and that it is unfair to raise rates for the benefit of railway shareholders, who already have received great assistance from the Government. The lumber trade ought not to be subjected to any further burdens. The vice-presidents of the railroads held a conference with the Council of the Board of Trade on the 22nd inst., the lumber interests being represented by Mr. P. D. Gordon.

The rates of freight for the coming export season are still uncertain, and there appears to be little hope of any contracts being made just yet. The steamship companies are in the dark as to the amount of tonnage which will be available, and on this depends the freights which will have to be paid. One thing is sure—prices will be high.

The pulp and paper sections show very little change, business being quiet. The Dominion tariff is likely to affect some of the finer grades of paper favorably, although it must not be overlooked that raw materials are included in the new duties. The propostd addition to railway rates will mean higher cost of pulp and paper, but it is not likely that the trades interested will raise any objection to the revised schedule.

## St. John Trade Continues Quiet

St. John, N.B., February 20th (Special to the Canada Lumberman): There is very little, if any, change to report in the local lumber market at this port. Local trade is now very quiet. All repair work has ceased, only such work as is absolutely needed is being done. Prices remain firm and if there were any large amount of business coming to hand prices would be liable to stiffen, especially in the better grades of spruce deals, which are demanding a good price for export. If used for local work the purchaser would have to pay more than last season's prices. Stocks of all kinds of lumber are not excessive. Every deal will be moved by the opening of navigation, no great quantity being now on wharves here, and these deals would not be here were it not for the shortage of tonnage, which is almost impossible to get at any price. One hundred shillings per standard is the minimum rate at which vessels are chartering. Sailers are getting these rates or better, but it is hoped that some reduction may soon take place in freights. Parties having scantlings, deals, or planks to offer for immediate shipment are getting extra good prices, as high as $18.50 to $19 has been paid for 3 x 4, 5, 6 in., while $20 has been paid for 3 x 7 in. and up deals, alongside ship at this port.

All the stocks from interior points are now beginning to move, this last week being the first in which any snow has fallen so as to make hauling possible. The portable mills are all running and will continue to do so as long as they are stocked with logs. Any person who could get a small portable mill and had the lumber to saw is doing so this winter. If the weather is satisfactory a larger cut of rotary sawn deals will be manufactured this season than last. Very little snow has fallen on the lower river counties and it has been impossible to haul any logs until the last week. Weather for yarding has been ideal, and more logs have been yarded both in the lower sections of the river as well as the upper sections. All that is now needed is plenty of snow to move logs, if this does not come it will mean great hardship for the lumbermen especially in these lower reaches of the river near the coast. Prices for logs are higher than last year, but no one can tell how long this will continue, both as to prices of deals and logs. The conditions do not warrant any gambling and persons doing so are very apt to be caught. Logs sell for around $14 for deal logs and $10 for spruce battens, 8 in. and up, delivered here, with uprive: logs from the head of the river in the neighborhood of $14.50 or thereabouts. All the large operators on the head of the river have exceeded their cuts about 25 per cent., caused by the fine woods conditions. If driving conditions are good this will make a full season's sawing at St. John.

Locally, prices are more or less ruled by the demand and in some cases are being shaded to get business, which is very scarce. Factory work of all kinds is down to rock bottom and will probably continue so until warm weather. It is not anticipated that any large construction work will take place this winter. or during the summer, but it is expected that considerable house building will be carried on. Stocks of refuse lumber are large enough to take care of all business coming to hand. Prices remain about the same, viz., $13 to $14 per M. for boards, scantlings and deals delivered to work in the city.

The shingle trade remains quiet, stocks are not heavy, only about enough to care for trade until spring opens. Laths are being sold for about $2.75 on wharves at St. John, but only a few new laths are coming in on cars.

## Ottawa Trade Showing a Little Improvement

Ottawa, February 22 (Special to the Canada Lumberman): The war tariff and taxes, and the application to the Railway Commission by the Canadian Freight Association, which represents all the railways operating under the jurisdiction of the board, to increase the freight rates on all lines east of Port Arthur, have been all absorbing topics of discussion among the Ottawa lumbermen during the past week.

The consensus of opinion among members of the trade in Ottawa on the increase in the tariff is that Hon. W. T. White, Minister of Finance, has chosen tolerably good methods for raising the revenue needed to meet the added financial burden caused by the war. There is one fear, however among the lumbermen here, arising out of the boost in the duty on lumber of 7½ per cent., a fear that if realized would undoubtedly hurt business to a considerable extent. This is that the United States may put a retaliatory duty on lumber into effect. But to offset this fear is a belief that the American Government will realize that the increase in duty decided on by the Canadian Government is for war purposes only and will be in effect only so long as the war lasts. A canvass made of some of the leading members of the trade elicits the information that there is no complaint registered in regard to the change. There are some who are inclined to thnk that it will be a good thing, as it mav cut down the imports of southern pine, and therefore encourage the use of Canadian lumber that enters into competition with the product from the south.

The application of the railways for an increase in the freight rates on eastern lines was filed with the Railway Commission last Thursday. The proposed increase on lumber and forest products is from ¼ to 1½ cents per hundred pounds. March 1st has been set for the hearing and it is likely that the railways will be vigorously opposed by representatives of the Canadian Lumbermen's Association and shippers in general.

With the improvement in weather conditions lately there is a more optimistic feeling that business will pick up. It is, as a matter of fact, showing some improvement lately. Some fairly good purchases have been made in the last few weeks by United States buyers. The prospects for activity in local building are brighter than was expected a short time ago. Sir George Foster, Minister of Trade and Comerce asked the House of Commons last week for a grant of $6,000 to be used for the control of ocean rates. He said he would like $100,000 to develop his department in preparation for the trade opportunities which the war is opening up. Sir George, in answer to a query from Hon. Dr. Pugsley, said that he intended to secure the services of an expert to investigate the matter of ocean freight rates. He has not yet secured this man. In the last six months the minister explained, it has been rather difficult to regulate the rates owing to so many vessels being taken over by the British Admiralty and conse-

quently there has been a scarcity of ships. Increases in the rates between Canada and Great Britain, he stated, have not been so great as they have been elsewhere. Mr. J. H. Sinclair, M.P., for Guysboro, N.S., suggested that if, instead of holding the ship owner responsible for the board measure, he should be held responsible only for the number of pieces received, lumber rates might not be so high since rates are now charged to cover the responsibility which accrued to the ship-owner under the existing law, for any shortage in measurements.

Though there have been no sailings of boats to Great Britain cancelled from Canadian ports on account of the threatened blockade of the waters around the British Isles by Germany, there is no doubt that the export trade will be affected to some extent.

In the main estimates for public works, etc., brought down in the House of Commons a few days ago, provision was made for the expenditure of $190,329,352.06, as against $208,118,672.25, for last year, a decrease of $17,789,320. The amount to be spent in Ottawa totals $1,170,000.

Lumbermen will be interested in the bill to prevent the pollution of streams given its second reading in the Dominion Parliament a few days ago. If the bill passes, it will mean an additional expense to firms which now dump sawdust, chips, etc., in to navigable waters, since the bill provides for the imposition of a heavy penalty. Sir Wilfrid Laurier pointed out that, as now drafted, the bill would work a hardship on the operator of a sawmill on a navigable, though never used stream. The bill is likely to be modified so that it will apply only to waters that are navigated.

---

Thessalon, Ont., February 18th (Special to the Canada Lumberman):—The weather at the present time is all that could be desired for lumbering operations. We have abundance of snow and frost. The ice on the lakes is excellent, and logs are being hauled very fast. If the cold weather holds as at present up to the 15th of March, there will not be a log left on the skids. Some camps are breaking up this week and others will break up as they get through, from this on. The 15th of March will clean up everything.

Mr. W. E. Bigwood, of Graves, Bigwood & Company, visited Thessalon last week. Graves, Bigwood & Company are taking out a large stock this year.

The output here this year will exceed that of last year by about 20,000,000 feet, on account of the large amout of down timber.

The writer visited about twenty-five camps during the last ten days and the way the logs are coming in is wonderful. I have seen some loads with 120 logs, and some very good logs at that. The largest loads I have seen hauled were at the Waldie Bros.' camps. This firm have a new arrangement in connection with their loads. Stakes about 3 ft. long, leaning out, are secured in the ends of the bunks, making a load about 14 ft. wide on the third tier of logs. This enables them to pile on a great load.

There have been some sales of lumber on the shore this season, the prices being about the same as last season.

Men are very plentiful for woods work. Some men were hired recently for $15 per month. There will be a large number of idle men on the shore from now until the ice is clear and the drives start, and also until the mills commence sawing.

The Hope Lumber Company, Thessalon, are making extensive improvements to the North Channel mill which they purchased recently. They will have a very fine stock of logs, which are being cut on the Forest Reserve.

---

## St. John January Shipments Show Large Increases

Shipments of wood goods from St. John, N.B., to United Kingdom, Continent, Australia, etc., during January, 1915 and 1914, are reported by W. Malcolm MacKay, St. John, N.B., as follows:—

# EDGINGS

### Ontario

J. C. Sanderson, of Jarvis, Ont., has sold his retail lumber business to A. and W. J. Bailey, of Hagersville, Ont.

John C. Howey, Port Dover, Ont., is contemplating the erection of a sawmill. It is expected that the plant will be completed by April.

Knight Bros., Burks Falls, Ont., are reported to be in the market for the following sawmill machinery; 1 edger, 4 power driven under rolls, and 2 pressure rolls.

W. P. Ball, Welland, Ont., is drawing up plans for a furniture factory. The building will be 1½ storeys, 25 x 50, frame construction with concrete foundation, shingle roofing and pine floors.

Curtiss Aeroplanes & Motors Limited, have been incorporated with head office at Toronto, and capital stock of $50,000 to manufacture, buy, sell, etc., all kinds of aeroplanes and flying macnihes.

S. Anglin & Company, Kingston, Ont., recently lost their planing mill and sawmill by fire. The damage amounted to about $15,000, and was partly covered by insurance. The company report that they intend to rebuild as soon as their insurance has been adjusted.

The Alliance Lumber Company, Hamilton, Ont., has been incorporated with capital stock of $40,000. The directors are R. J. Press, M. Cole, D. Cole, A. A. Hines and J. H. Rutherford, all of Hamilton. The company is incorporated for the purpose of carrying on business as saw and planing mill operators, and manufacturers of woodenware and builders' supplies.

The Northern Construction Company has sold its entire stock of lumber in its yards at Fort Frances, Ont., to Messrs. Fullerton and Krugar, of Minneapolis, Minn. The amount of lumber involved is over 9,000,000 feet. It is reported that the Northern Construction Company will also dispose of their mill and that it will be operated in the spring by a new company.

### Eastern Canada

The new sulphite plant of the Belgo-Canadian Pulp & Paper Company, Limited, at Shawinigan Falls, P.Q., is now in operation, producing unbleached news sulphite.

The Grand Valley Lumber Company, Limited, has been incorporated with head office at Montreal, and capital stock of $75,000 to carry on a general manufacturing and trading business in lumber.

The Sainte Anne Lumber Company, Limited, has been incorporated with head office at Montreal, and capital stock of $75,000, to manufacture, buy, sell, and otherwise deal in logs, timber, lumber, pulpwood, railroad ties, and the products of the forest generally.

The South West Boom Company is applying to the Legislature of New Brunswick for an act to extend the company's charter for a further term of twenty years and to authorize an increase of 10c per thousand feet in the rate charged for the boomage of logs and other lumber.

Geo. McKean & Company, Limited, St. John, N.B., have been incorporated with capital stock of $100,000, and head office at St. John, to carry on the business of general timber and lumber merchants. The incorporators are W. K. McKean, G. R. McKean, W. E. Golding, F. R. Taylor and O. Ring, all of St. John.

La Compagnie de Construction Generale du Lac Saint-Jean Limitee, has been incorporated with head office at Roberval, P.Q., and capital stock of $10,000. The company is given power, among other things, to purchase, lease, and sell timber limits, etc., and construct and operate sawmills. Among the incorporators are A. Levesque, D. Neron, G. Levesque, T. L. Bergeron and J. H. D. Brassard, all of Roberval.

### Western Canada

The Vancouver Shingle Mills Limited, have been incorporated in British Columbia with capital stock of $10,000, and head office at Vancouver.

The British Columbia Shingle Company, Limited, has been incorporated in British Columbia with capital stock of $100,000, and head office at Vancouver.

The Builders' Wholesale Lumber Company, Limited, has been incorporated in British Columbia with capital stock of $5,000, and head office at New Westminster.

The planing mill of the Ladder Lake Lumber Company at Big River, Sask., which has been idle for some time has again commenced operations, giving employment to between 40 and 50 men.

The Mackie Mill & Mercantile Company, Gettysburg, Wash., U. S. A., have started work upon the erection of a shingle mill at New Westminster.

B.C., on the south side of the Fraser River. The mill will have a capacity of 200,000 shingles per day.

H. S. Moore, Blairmore, Alta., is contemplating the erection of a wood distillation plant, at a cost of $20,000, at Cranbrook, B.C. It is expected that construction work will commence in the spring.

The Superior Sash and Door Company, 226 14th Street, New Westminster B.C., recently lost their sash and door factory by fire. The damage is reported to have amounted to $100,000, and was partly covered by insurance.

The M. J. Walker Company, Weyburn, Sask., have sold out all their holdings to the McIlraith Lumber Company, of Radville, Sask. Four yards are included in the deal, at Colgate, Tribune, Bromhead and Torquay. The McIlraith Lumber Company already have a number of yards in the southern part of the province.

---

A conference was recently held at Chicago between the representatives of the National Hardwood Lumber Association and the Federation of Furniture and Fixture Manufacturers, the object being to discuss the inspection rules' situation. A resolution was passed that, pursuant to the request of the inspection rules' committee of the Federation of Furniture and Fixture Manufacturers, the National Hardwood Lumber Association should appoint a special committee of five for the purpose of conferring with a like committee representating the Federation of Furniture and Fixture Manufacturers on the subject of inspection rules and to conduct test inspections, with the object of seeking to harmonize such differences as may be found to exist and to bring about a closer co-operation between the organizations. A resolution was also passed to the effect that the Federation of Furniture and Fixture Manufacturers would accept the present standards of inspection of the National Hardwood Lumber Association until final report is made by the appointed committee.

---

The Provincial Government of British Columbia is making strong efforts to secure for the lumber manufacturers of that province, all, or a portion, of a contract for 500,000,000 feet of lumber which it is reported will be let by the French Government to replace the losses in war, and also to be used for military purposes. Representations have been made to the Provincial Government that unless the royalty on timber is removed in connection with such contracts, British Columbia mills will be unable to compete successfully with Oregon and Washington companies. It is estimated at present that the French Government contract will run into stock to the value of $7,500,000.

---

The annual banquet given by The Stearns Salt & Lumber Company, of Ludington, Mich., to its office employees was held on Saturday evening, February 6, at The Stearns Hotel. Over one hundred guests were present. Stories were told and vaudeville turns were given for the amusement of the diners between courses. This part of the entertainment was in charge of the sales manager, J. E. Dewey. The balance of the evening was spent in dancing and games, which were in charge of A. M. Johnston, advertising manager. The salesmen came in from the road to take part in the festivities and it was one of the most successful events of its kind ever held in the city.

---

A Bill to incorporate La Societe des Reserves Hydraliques du Saguenay has been defeated in the private bills committee of the Quebec Legislature. The lumber trade was interested in the bill, which affected the floating of timber on the rivers of the district. It was proposed to build dams and dykes on the Chicoutimi, Aux Sables, and Peribonka Rivers, their tributaries and lakes, for the object of regulating the flow of the water. Opposition to the bill was based on the point that an agreement already existed between two large companies for the distribution of water and that the Legislature ought not to interfere with the present contracts.

---

A despatch from Ottawa states that Sir Geo. Foster, Minister of Trade and Commerce, is arranging to send to Australia, a commissioner to secure trade in that country for British Columbia lumber. It is hoped that under the favorable conditions which now prevail, a large amount of business for the mills of the Pacific Province will be worked up by means of sending a Government commissioner to that country.

---

In the United States and Canada the preservative treatment of telephone and telegraph poles and cross ties has not yet become customary though the industry has made considerable progress during the last year. This impregnation of wood with oils and chemicals to increase its resistance to decay has been very general in Great Britain and many European countries for some years.

---

The annual meeting of the National Hardwood Lumber Association will be held this year at Chicago, on Thursday and Friday, June 10th and 11th.

# A Customer's Opinion of Moreau Barkers

The
St. Simeon Lumber Co.
Limited

Doreil, P. Q. January 30, 1915

Mr. Chas. Manseau, Sales Manager
The Moreau Barking Machine Co., Ltd.
Drummondville, Que.

*Dear Sir:—*

*We beg to acknowledge receipt of your favor of the 20th inst.*

*We installed six Moreau barkers in May, 1907 and since that date we reckon that each of these machines has barked 15,000 cords of wood, costing on an average from 40 to 45 cents a cord, according to circumstances. Maintenance for each of these machines amounted to from $5 to $6 per year. We reckon the loss of wood through barking averages about 18%. These machines have proved so satisfactory to us that our firm, having decided to build a new mill, will install 8 or 10 of these Moreau barkers in it.*

*Yours very truly*
*The St. Simeon Lumber Co., Ltd.*
*Doreil*
*Per Alf. Garneau*

The Moreau Barking Machine is something quite different from any other rossing device.

It has a capacity of from 2 to 3 cords per hour and only requires 6 H.P. to operate it, and it eliminates the time consuming and costly operation of boiling logs.

The Moreau Barker only diminishes the log 18 per cent. as compared with a loss of 25 per cent. to 30 per cent. by other barkers.

The Moreau is an Automatic Barker and its working efficiency is not dependent upon the operator. This feature is particularly advantageous when the logs to be barked are crooked.

Used in conjunction with a pulp wood plant the Moreau Barking Machine will show surprising results. A valuable feature of this outfit is that it is readily portable to any point in the woods—at the railway siding or wherever shipping facilities are offered. Its own weight is sufficient to hold it in place when in operation.

## The Meaning of

# Transmission Efficiency

## In the Mill

"Transmission Efficiency" means the smooth and uninterrupted working of every belt in your mill—no slipping and consequent loss of power—no shut-downs—no stops or delays for adjustment and repairs.

Would you have "Transmission Efficiency" in your mill? Then equip your plant with

# NEPTUNE
# Waterproof Leather Belting

The belting which will give you the **highest efficiency in power transmission** throughout your entire plant.

In places where the ordinary kind of belting goes all to pieces, **"Neptune"** belting runs right along day after day, every joint and every lap as tight and secure as when first installed.

**"Neptune"** is the pioneer of all waterproof belting—it has steadily grown in favor with planing and lumber mills, because of its wonderful durability and waterproof features. Its large sale throughout the Canadian provinces is strong proof of its genuine value—it has the unqualified endorsement of thousands of users.

Remember, **Neptune Leather Belting** is guaranteed to be absolutely waterproof, that the laps will not loosen if wholly submerged in water, and, if double belting should be used, that it will not come apart in the laps or between the plies.

Let us send you further particulars with prices and samples of the **Neptune Brand,** also a copy of our **24-page Neptune Book.**

# Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

# Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

# Veneer Coe Machinery

# Automatic Knife Grinder

The Coe Knife Grinder was designed for the finest grinding and most exacting service. It is built on new lines and has completely overcome the objections to other grinders.

The knife is held rigidly while the stone travels back and forth. There is no chance for vibration, consequently no unevenly ground knives. Entirely automatic in action, no ropes or chains. All moving parts operated by cut steel gears, noiseless in operation. Will grind straight or hollow bevel. Feeds 1-1,000″ to 4-1,000″ for each travel of the stone. Very heavy and compact, occupying small floor space. Made in seven sizes, to grind up to 168 inches.

It is fully described in our catalog which we will be glad to send to interested parties.

## The Coe Manufacturing Co.

**Painesville, Ohio, U. S. A.**

*Established 1850*

***The oldest and largest manufacturers of complete veneer equipment in the world.***

## Do Your Men USE or ABUSE Their Files?

The correct USE of a file is to retain it on a certain class of work until its efficiency is impaired. When it reaches the point where it requires more effort to remove less stock, it should be promptly replaced with a new one.

The ABUSE of a file is its retention *after* it has passed the "impaired efficiency" point. It is no longer able to operate swiftly, accurately nor economically. The expensive time and labor it wastes more than offsets the costs of several new files.

Investigate filing conditions in your plant. See if your mechanics are *using* their files *to your profit*—or *abusing* them to *your loss.*

Insist that all files be replaced *promptly* —preferably with the

# 20 Years' Service

Saginaw Band Resaw

*a Specialty with this line* BAND RESAWS

Ludington, Mich.,
Dec. 23, 1914

Gentlemen,—

We purchased a Saginaw Band Resaw in 1895, which has been in continuous use ever since. Out of over 500,000,000 feet of lumber, all that was suitable for resawing has been put through this machine.

We have twelve years' cut ahead of us and this machine will outlast our timber.

Yours truly,
STEARNS SALT & LUMBER CO.

# GOODHUE BELTING For

# Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power.

For the wet places in the mill we have a special waterproof leather belt—"Acme". Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

***SEND FOR PRICES AND PARTICULARS***

## J. L. Goodhue & Company, Limited

DANVILLE - QUEBEC

OUR long experience with the particular requirements of the Lumber Industry of Canada places us in a position to give you exactly what you require for your particular work.

We have lately opened a branch at Hull, Que., where a full line of cross-cut saws, bits, holders, etc. is carried. A fully equipped repair department is in connection for the convenience of our many customers in that section of the country.

Our Vancouver Branch is similarly equipped.

You are assured ***Prompt Attention*** and ***Immediate Delivery.***

**Not altogether what we say but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

**West & Peachey - Simcoe, Ont.**

"To be, or not to be, that is the question,
Whether 'tis nobler in the mind
To suffer the slings and arrows
Of outrageous fortune,
Or to take arms against a sea of troubles." —Hamlet.

**Hamlet the Prince of Denmark is a character which**

every budding actor aspires to play. The late Sir Henry Irving certainly inspired many to study the works of Shakespeare and those who were privileged to hear him in Hamlet's famous soliloquy are not likely to forget it. Most of us have been in a state of doubt on many occasions and said to ourselves: The question is:

**TO BE, or not TO BE**

We can serve the interests of our customers who use Babbitt Metals and recommend without any hesitation.

**Harris Heavy Pressure**

***The Babbitt Metal Without a Fault***

**Engineers using H. H. P. avoid a sea of troubles. They know IT WILL GIVE EXCELLENT SERVICE**

***Manufactured and guaranteed by***

**There's absolute Safety in every link**

Why buy a chain "just as good"—and take chances on failure—when we offer you a chain—made of the highest grade materials—which practically *cannot break.*

**The name AJAX is everywhere accepted as meaning the highest quality in chain.**

***Specify it on your next order.***

**Standard Chain Company - - - Pittsburgh, Pa.**

# The Steam Tension Band Mill

It is called the steam tension mill because the tension is maintained by steam—the most sensitive form of tensioning which has been devised.

The result of this is a great saving in saws—**several users of the machine have run through an entire season without cracking a single saw.**

But in addition to raising and lowering the top wheel by steam, there is a separate cylinder for operating the top guide, and these two cylinders make ours an entirely steam-operated mill, and, therefore, exceptionally fast.

It is made with 8 ft., 9 ft. and 10 ft. wheels, and will stand thorough investigation.

Write for bulletin and list of users.

"LET US KNOW YOUR WANTS"

**J. W. JACOBS,** 29 Hermine Street, **Montreal**

There are numerous makes of balata belting on the market, some first class, and others which contain little or no balata gum.

The value of the balata is the thorough impregnation of the fabric possible with that gum.

Lanco Balata Belts are impregnated with pure balata gum, and they do not deteriorate with age. You can save money by buying in rolls, or half rolls.

# A Word About The Hides Used In "AMPHIBIA" Waterproof Leather Belting

Even before tanning there is a big difference in hides—particularly in their tensile strength. The hides used in "AMPHIBIA" belting are obtained from the best stock at a season when the hides are toughest. They are carefully tanned in our own tanneries by a secret waterproof process which renders the leather absolutely impervious to oil, steam, water or fumes.

The best of the butts is then selected for use in "AMPHIBIA" belting, any weak or thin spots having been culled out by experts.

Every stage of manufacture is carefully supervised and every precaution taken to make "AMPHIBIA" the best leather belting on the market.

## "Leather like gold has no substitute."

## To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

## "Hipcoscope" Lumberman's Electric Lantern

**Always Ready. Can't Start a Fire. Cheaper to Use than Oil.**

This new searchlight (see illustration) will throw a strong light 300 feet. Operated on two No. 6 dry cells which may be secured anywhere in Canada for twenty-five cents each.

The "Hipcoscope" is the ideal light for your night watchman—he can search every alley. The "Hipcoscope" gives 200 hours light for fifty cents.

It is impossible for the "Hipcoscope" to start a fire no matter what you do to it. Used with the "Hardinge" Portable Watchman's Clock your plant and yard are practically safe from fire or theft. Owing to weight it does not pay to ship batteries. Delivered free without batteries, for $4.50 anywhere in Canada.

# A Customer's Opinion of Moreau Barkers

The
St. Simeon Lumber Co.
Limited

Doreil, P. Q. January 30, 1915

Mr. Chas. Manseau, Sales Manager
The Moreau Barking Machine Co., Ltd.
Drummondville, Que.

*Dear Sir:—*

*We beg to acknowledge receipt of your favor of the 20th inst.*

*We installed six Moreau barkers in May, 1907 and since that date we reckon that each of these machines has barked 15,000 cords of wood, costing on an average from 40 to 45 cents a cord, according to circumstances. Maintenance for each of these machines amounted to from $5 to $6 per year. We reckon the loss of wood through barking averages about 18%. These machines have proved so satisfactory to us that our firm, having decided to build a new mill, will install 8 or 10 of these Moreau barkers in it.*

*Yours very truly*
*The St. Simeon Lumber Co., Ltd.*
*Doreil*
*Per Alf. Garneau*

The Moreau Barking Machine is something quite different from any other rossing device.

It has a capacity of from 2 to 3 cords per hour and only requires 6 H.P. to operate it, and it eliminates the time consuming and costly operation of boiling logs.

The Moreau Barker only diminishes the log 18 per cent. as compared with a loss of 25 per cent. to 30 per cent. by other barkers.

The Moreau is an Automatic Barker and its working efficiency is not dependent upon the operator. This feature is particularly advantageous when the logs to be barked are crooked.

Used in conjunction with a pulp wood plant the Moreau Barking Machine will show surprising results. A valuable feature of this outfit is that it is readily portable to any point in the woods—at the railway siding or wherever shipping facilities are offered. Its own weight is sufficient to hold it in place when in operation.

# Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the townships of Burpee, Falconbridge and Street for small mills.

**We have the following Sawmill Machinery for sale:**

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

## FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

## POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

# "That, in my Opinion, is the Resaw for our Work.

# "Of Course it's up to You What Machine We Buy. But my Advice is, Install This New Berlin."

LIKE many other Lumbermen you may be considering the installation of a band resaw as the most economic method of increasing your capacity. Your investigation, then should extend to the new Berlin vertical resaws; for during the past eighteen months these machines have proven themselves to be the most generally efficient saw mill resawing units in use both in Canada and the U. S. They are worthy of your confidence.

The one type of machine is built right and left hand with 64-inch, 6-foot, 7-foot and 8-foot wheels. Whatever your requirements may be you will surely find a resaw in our new line capable of giving the increase in capacity you desire.

One of the strongest arguments we can offer for the new Berlin resaws is that they meet with the full approval of practical men. They stand the most searching investigation and endure on their actual merit.

They are practical in design, and their stable, rugged construction enables them to stand up to consistant hard saw mill service. They feed fast, cut true, and give very little trouble. That's why users recommend them.

We want to place descriptive circulars covering these new resaws in your hands and have you go over the merits of the machine with your practical man. You should have one of these circulars in your file, even if you don't intend to install additional resaw equipment for some time.

***Don't lay aside this paper until you have mailed us a request for a "Heavy Duty" resaw booklet.***

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 35 Toronto, March 15, 1915 No. 6

# Are We Approaching Good Times?

The financial situation of the farmer on the prairie provinces of Canada has probably more to do with the welfare of the whole Dominion of Canada than any other economic or industrial feature, excepting, of course, the abnormal factors brought into play by the existence of the war; and even in the face of war conditions, it is the opinion of many well-informed Canadians that the farmers of the prairies, if they secure a good harvest this year will be in a position to set the wheels of Canadian commerce and industry in motion so effectively as to counteract the ill-effect of the war and make Canada prosperous.

That this is not an unreasonable idea is indicated by the present situation and the outlook for the year 1915 as seen by a well-known lumber manufacturer of western Canada, who recently visited Toronto and expressed his views in detail upon this subject. Taking figures which had been given to him by a prominent western banker this lumberman quoted the banker as saying that the farmers of the prairies would receive between $350,000,000 and $400,000,000 for their crops this year. This estimate is based upon reports which the bank has received from many quarters to the effect that the acreage of grain sown this year will show an increase of about 20 per cent. At the time the estimate was made wheat was selling at $1.50 per bushel, a price which, taken in connection with the reports received for other grains and animal products will yield the amounts mentioned above.

Whatever the actual results may be in dollars and cents, there is no gainsaying the fact that, with a high price for their wheat, the farmers of the west this year will be in possession of a vast amount of money, so long as the country is not visited by a crop failure, an event which no agricultural experts are expecting. Everyone is more or less familiar with the manner in which the prosperity of the Canadian farmer affects the financial and industrial situation of the whole country. Under present conditions, however, the influence of such a situation will be more direct and definite than under ordinary conditions, for the whole country has been marking time industrially ever since the collapse of the real estate boom which was founded largely upon the agricultural prospects of the prairie country and the enormous immigration which it encouraged. These prospects were discounted far into the future and we have grown accustomed during the last few months to hearing the opinion expressed that it will be a long time before the west will catch up to itself and be in a position once more to encourage industry throughout the rest of Canada to any great extent. If conditions had continued as they were and there had been no war, it is more than likely that this would have been the case and that we would have had to pay for many years to come for the temerity with which many Canadians sent their money travelling into the future. But the war has changed all our calculations in this connection and there are now a large number of people who believe that as soon as the war is over there will come to Canada once more a great flood of immigration which will be a strong factor in placing the country again in a good position for prosperity and growth.

---

There are other factors closely connected with the existence of the war which are creating a new state of affairs in Canada and which will bring about prosperity long before we could have hoped for it under normal conditions. The vast amounts of money which have already been expended in Canada in the purchase of supplies of many kinds for military purposes afford probably the most important factor which has yet developed in connection with the return of industrial activity, which is beginning to be seen. In the west we had only commenced to see the withering effects upon the lumbering industry of the recent extravagance of our people. Many of the greatest lumber producing companies in Canada had been driven into positions of financial embarrassment. A few months ago we were hearing of these troubles every day and we were wondering where the end would be.

During the last few weeks the news reports have been of another color and have told of such large orders for timber for military purposes and for railroad construction both in Europe and America that large manufacturing companies in British Columbia and the Western States are starting up again and expecting with confidence that the orders already out are the forerunners of many others which will keep the saws busy for many months to come. In Eastern Canada the war has already created activity and prosperity such as lumber manufacturers have seldom known before. Moreover, these war orders are not handicapped by the high price of freight transportation. When one of the governments at war purchases timber or other supplies, it needs it as soon as it can be shipped, and as the Allies control the ocean shipping situation today they can provide the vessels for transportation. These orders, therefore, all mean great and unwonted activity in Canada and the circulation of great sums of money which cannot result otherwise than in widespread general and individual benefit.

---

When one has considered all these circumstances and has rejoiced at the benefits which Canada will reap from the unfortunate existence of the war, there is still another factor to be considered, namely, that Canada is one of the few countries which is able to take advantage of the demand created by the war. Our resources are large, our raw materials and manufactured articles are in many instances of great value to the allies. We are so far removed from the seat of war that we can develop our manufacturing without interference. We have ready access to the great money markets of England and the United States, so that we are not handicapped in producing the articles needed. We are, in fact, in an ideal situation not only for supplying the actual requirements of the fighting armies of the Allies, but for filling the deficiency in the production of European countries which have been devastated of their manufacturing plants, their workmen, their farm laborers and their fertile fields. In the matter of farm products alone, it is estimated that the deficiency in the grain production of Europe for 1914 as compared with 1913 was about 357,888,000 bushels. Germany, Austria, Belgium, France and Russia will not be able to make up the deficiency until after the war. The war presents to the farmers of Canada, therefore, a unique opportunity of help in the return of prosperity to the people of Canada and to do their share in

feeding the armies of the Allies. We believe, from the reports which have been received, that the farmers are awake to this situation and have already made preparations which will result in a greatly increased yield for 1915.

There is no way of estimating what will be the value of a bushel of wheat when it is harvested. The price fluctuates so greatly from time to time that prediction would be foolish, yet the farmer of the west is already expecting that his crop this year will bring him $1.50 per bushel. A recent estimate placed the 1915 crop at 195,520,812 bushels of wheat. This at $1.50 per bushel would yield $293,281,218 which is a great increase in wealth for the farmer of the west when considered alongside of the figures for 1914, which were 139,090,000 bushels, at an average price of 54c., making the total value $74,602,-614. Other cereals are estimated for 1914 at a total value of $88,206,-758, making the total receipts of the prairie farmers $381,487,976. This is believed by men who are conservative in their views to be the lowest possible estimate of the amount of money that will come into the hands of the western farmers this year.

---

It must be remembered that the activity of the British Columbia lumber manufacturers which has recently commenced to show itself on account of the large military and railroad purchases, and the activities of the eastern lumbermen on account of the demand for spruce and pine in England to take the place of stocks which cannot be secured at present from northern Europe, are based entirely upon a demand which has nothing whatever to do with the Canadian farmer. This demand is likely to continue at least during the war, and probably even thereafter, for, the minute the demand for military uses ceases there will be an even greater demand for building up the countries which have been devastated by the war, and the railroad companies will experience at once an acceleration of their freight business, such as they have seldom experienced in the past. The demand from Europe, therefore, will continue, and when on top of it there comes the demand of the prairie farmer and the general Canadian farmer, as a result of the money which he receives for this year's crop, it will be a remarkable thing if the lumber industry does not become the most prosperous industry in Canada.

In all this discussion of the situation no mention has been made of Ontario; but Ontario is in that happy position in which it cannot fail to be one of the greatest beneficiaries from the general prosperity of the country. It will ship lumber to the middle west. It will ship agricultural implements. It will ship furniture, stoves, building materials of many kinds, and in fact manufactured articles of every description. It will immediately feel the benefit of the circulation of money which becomes effective in the near future.

While the "Canada Lumberman" is always on the watch for a reasonable opportunity to tell its readers of the brighter side of the industrial picture, all that has been said above is not of its own conception. These views, while they are held by us, are really the views of men in the lumber industry in all parts of Canada which we have heard expressed from time to time during the last two months, and especially during the last few weeks, and while at first they were mentioned with some hesitation they are today expressed freely on all sides, so that we have become convinced of their truth.

---

# Careless Credit and Its Consequences—A Call for Reform

"I see that you have been publishing a good deal of material about credits and collections in the Canada Lumberman recently," said a prominent Toronto retail lumberman a day or two ago in conservation with the editor. "That is the one question above all others that stands out as one of practical importance to the trade and unless the trade takes to heart the advice which you have been publishing and does something of a radical nature pretty soon, many retailers, and wholesalers, too, let me tell you, will be in greater trouble than they have ever been in before. I do not mean that business is any worse today than it is usually at this time of the year, but I do mean that, with business in its present condition there cannot be any more indiscriminate granting of credit without trouble." The retailer who made the above remarks is a man whose opinion is respected by everyone in the trade and one who never talks in such a manner unless the occasion calls for it strongly. Discussing the matter in detail he stated his views along the following lines.

Get down to the bottom of the trouble and you will find in a great many cases that the origin is with the speculative builder, a man who is said to be taking a chance, but who in reality is taking a very one-sided chance, for, if the speculative building business is successful he makes money, if it is not successful he has little or nothing to lose, and men who give him credit for lumber and other building materials are the ones who suffer. The speculative builder, however, is only a single factor in the situation, and could not be such a dangerous factor if he were properly held in check. The greatest cause of trouble is the retailer who fails to conduct his business in a businesslike manner. He generally employs a canvasser to hunt up business, at a salary of $1,000 or $1,500 a year, a man whose work is to call on the contractors, architects, and men who intend to build, and try to get their business. He is paid a salary and he has nothing to do but get orders. He goes to extremes in order to earn his salary. He takes any business that offers. The speculative builder finds him nicely suited to his case because he will sell him lumber at the lowest possible price and will deliver it without question as to payment. The retailer's canvasser, when he gets an order, is likely in almost every case to represent the new customer to his employer as deserving of all the credit requested. The result is that when business comes to a standstill, the retailers find themselves loaded with many dead accounts. This canvasser or solicitor, or whatever he may be called, is a menace to the trade. The retailers in a city like Toronto must stop this way of doing business or the trouble will never cease. They ought to talk the matter over between themselves and they can easily remedy matters. It is only a question of resolving to be more careful about credits and not to be so greedy about orders, and then living up to the resolution.

The same thing applies as between the wholesaler and a far too large number of retailers. The same foolish way of doing business prevails there also. There are three classes of retailers. There is the man who takes his two per cent. 30 days. There is the man who takes his three months, and there is the man who does not pay at all, or only pays a small amount when he is driven to it. This latter class, as a rule, will renew their notes time and again, paying only about 10 per cent. when they are pressed very hard; and the estimate of the retailer whose views are expressed above is, that the men who pay only when forced to do so constitute a full fifty per cent. of this class of trade, if not more. Among the wholesalers, there have been too many who encourage this class of retail customers. Recently they have been "stung" in several instances and have learned a lesson which will prevent some of them from ever making the same mistake again. The wholesalers should talk over this question with one another. There is no other way of eliminating the evil. They should decide to give no more credit to this class of retailer. The stocks which such a retailer carries must be thrown on the market when he fails. So long as such a man is doing business he is cutting prices under the other retailers who conduct their affairs on a reasonable basis, and when he fails his stocks are thrown upon the market at bargain prices and the consumers are the only ones who benefit. There is nothing in it for the trade no matter what the results may be but loss of business and a great deal of trouble.

The retailer who is referred to above is a member of the Lumbermen's Section of the Toronto Board of Trade which has just been formed, and he urged that this matter should be taken up at the next meeting of the Section. If this is done, there is a likelihood that the retailers and the wholesalers will thrash out the problems and be able to devise a plan for solving them. The matter is not a difficult one. It is only a question of making the resolution to conduct business in a businesslike manner and then living up to the resolution. Everyone will be better off. The trade will make a better profit on the

business which it does. There will be far less price cutting, and competition will be on a reasonable basis. No one will be injured except the man who wants to do business on other peoples' money, giving the owner of the money all the risk and taking for himself all the profit if any is made. These difficulties are common to every part of Canada and if the trade in Toronto are fortunate enough to be able to bring into effect a practical improvement in the situation their example will unquestionably be followed in other localities.

# The Railway Freight Case—An Unreasonable Request

In connection with the cost of transporting lumber, no question has ever come before the industry which is of greater importance than the application of the railway companies to the Dominion Board of Railway Commissioners for permission to increase their freight rates on all eastern lines. A report of the first hearing of this application by the Board is published elsewhere in this issue. Members of the lumber trade and industry should study this report minutely. The Board will hold further hearings at Montreal and Toronto and it is to be hoped that the case as already presented by the lumbermen at Ottawa will be further endorsed by strong protests at these hearings. At Toronto, the hearing will probably be held early in April. The Toronto trade, and in fact the whole trade of Ontario, should see to it that their views are presented before the Board.

In the broadest aspect of the case there is no question whatever that the present is a most inopportune time for proposing any such increase for moving freight. Even if we should admit that the railway companies are making less profit from their freight business now than formerly, and that they have reason for wanting higher rates, the present is no time for putting such rates into effect. The immediate and chief result would be a diminution in the amount of traffic, which would leave the railway companies no better off than they were before. Industrial conditions in Canada today are such that they will quickly respond to any such treatment by reducing the volume of business done. Moreover, the railway companies, if they are making smaller profits than usual, are no exception to the general line of business in Canada and they should be content, for the time being at least, to govern themselves in accordance with the examples which other lines of business have established. One has only to read a daily newspaper to discover that other lines of business are seeking to encourage trade in exactly the opposite manner to the railway companies, namely, by lowering their prices all along the line. We believe that the railway companies at present could do themselves more good in the same way than they could by increasing their freight charges.

Competition for business today is exceptionally keen. The volume of business is reduced. The situation is one which is governed more than anything else by a universal desire on the part of the consumer to reduce his expenditure. You cannot make business or increase profits at will today by increasing prices for your commodity or your service. You will either reduce the volume of business still further, or encourage the trade of competitors. With all the railway companies seeking permission to make a uniform advance in their freight rates there is no question of encouraging a competitor's trade. The result, therefore, must be that if freight rates are increased the volume of business will be diminished, in addition to placing upon the trade that remains a further burden which it will find great difficulty in shouldering under present trade conditions.

Leaving aside entirely all consideration of the statistics connected with the case, because we believe that they are not sufficiently strong to justify the railroads' request, the present is a most illogical moment for the railways to seek such an increase. It happens that their desire for this increase is based upon the permission recently given to the railways of the Eastern States to make a 5 per cent. increase in their freight charges, a concession to the railways which was made in reply to a request presented more than a year ago, before there was any fear of war, or of the great economic disturbances which the world has undergone since that time. The increase was granted after the war had been declared, it is true, but the facts upon which it was based were presented before the war and the whole question and its solution had to do with conditions entirely outside of any consideration of those conditions which have developed since the war began. For this reason the example of the United States is not one which justifies the Canadian railroads in seeking a similar privilege. Possibly, if the war had not occurred and there had been improvement in trade conditions in Canada, an increase in freight rates would have seemed reasonable; but under present conditions an increase would not only be unreasonable, but would be shifting on to the manufacturing interests of the country a burden which the railway companies, already large beneficiaries by the generosity of the people of Canada, should, if they wish to be considered as taking their share of the present national burdens, in all justice to the public of Canada, be content to carry for themselves.

# Editorial Short Lengths for Busy Readers

A report from Louisville, Ky., states that hardwood manufacturers are very much perturbed over the 7½ per cent. tax on lumber which has gone into effect in Canada. It had been known for some time that the Canadian Government would impose a war tax on lumber imports, but apparently few concerns prepared for it, though some large hardwood men have a few hundred thousand feet of stock on the other side of the border. The imposition of the tax will result, it is declared, in the consumer in Canada having to pay that much more for his stock, as the manufacturer in the United States would, of course, not be willing to shrink his prices to that extent. The tax is placed on the shipping price of the lumber, freight off.

That ocean freight rates on Canadian lumber were now so high as to interfere very seriously with the export trade to Great Britain was the statement made in Parliament recently by Hon. Dr. Pugsley, former Minister of Public Works, during a discussion of the question. Dr. Pugsley asked Sir George Foster, Minister of Trade and Commerce, whether any steps had been taken to regulate ocean freights in respect to Government subsidized mail steamers during the last six months. "It appears," he stated, "that the rate on lumber shipped to the United Kingdom, which a year or two ago was 36s per standard of lumber, today is 100s. That, of course, interferes very seriously with the export of lumber to the United Kingdom. I think lumber freights have been subjected, in fact, to an increase of about 150 per cent." The Minister of Trade and Commerce stated in reply that on account of the commandeering of so many vessels by the British Admiralty there had been a great scarcity of tonnage and ocean freight rates had gone up in all parts of the world. The last five months had been a very stormy time in which to regulate freight rates and he had not endeavored to do much in that direction.

The Interstate Commerce Commission of the United States has dismissed the complaint of the International Paper Company against the rates on pulpwood from points in the Dominion of Canada to points in New York effective on the Grand Trunk, Canadian Pacific and Intercolonial Railways and other roads engaging in this traffic. The Commission held that the extent of its jurisdiction over the joint rates involved would be to require the United States carriers to desist from concurring in any such rates, thus leaving the traffic to move on combination rates to and from the border points. The rates in question were previously found reasonable by the Dominion Board of Railway Commissioners and this decision was held to be material in deciding the complaint.

# Lumbermen Oppose Freight Advances

## Present Strong Arguments Against Application by Railroads for Permission to Increase Their Charges on Eastern Canada Traffic

Ottawa, March 4 (Special to the Canada Lumberman): When the application of the railways for an increase in their freight rates on all eastern lines came before the Railway Commission this week a protest was made in behalf of the lumbermen by Mr Frank Hawkins, secretary of the Canadian Lumbermen's Association and Mr. Arthur H. Campbell, President of the Montreal Lumbermen's Association. The protest from the pulp and paper makers came from Mr. Arthur D. Huff, traffic manager for the Laurentide Pulp and Paper Company, who appeared for the Canadian Pulp and Paper Association. After hearing evidence for two days here, the Board decided to hold sittings in Montreal and Toronto, and perhaps other cities, before attempting to give a decision in the case.

Mr. J. F. Orde, K.C., Ottawa, was present and informed the board that he had been appointed by the Dominion Government to hold a watching brief in the interests of the general public. He said that the Government was not going to stand idly by and see the railways boost their rates without a protest. It seemed strange, he said, that the railways should come along at this critical time with the application. If the railways are suffering by a falling off in revenue they are merely suffering as everyone else is at the present time, and they should bear their share of the burden and not try to shoulder it on the public.

Figures showing the extent of the increase in operating expenses and the falling off in revenue covering a period from 1909 to 1914, both years inclusive were put in by Mr. Howard Kelly, first Vice-President of the Grand Trunk, and Mr. E. W. Beatty, Vice-President and General Counsel for the C. P. R. Mr. J. E. Walsh, tariff expert for the Canadian Manufacturers' Association, registered an objection to the application, but he said that the manufacturers desired to be reasonable and fair. Those in Ontario are this year facing an added burden in taxation of over $3,000,000, of which amount $2,500,000 is the result of the new Workmen's Compensation Act and the increased duty of 10 cents per ton on bituminous coal means another $500.000. Added to this $3,000.000 will be the new Provincial tax of one mill on all business men. Mr. Thomas Marshall, Toronto Board of Trade; Mr. W. E. Tilston, Montreal Board of Trade, and Mr. W. E. Bremner, Ottawa Board of Trade, protested against the proposed increase.

### The Lumbermen's Reasons For Objecting

Mr. Frank Hawkins, made the following statement to the Commission; explaining that it outlined the attitude of the Canadian Lumbermen's Association in respect to the application.

"The minimum increase of ½c. per 100 lbs. asked for by the railroads may, in itself, seem small, but applied to the lumber tonnage originating in Canada of 8,391,000 tons will mean approximately an increased revenue to the railroads of $840,000 annually. These tonnage figures are taken from the Government blue book for the year ending June 30th, 1913.

"The railways' argument has been deficiency in operating expenses and gross revenue. Is it not a fact that increases in operating expenses are somewhat due to the duplication of routes such as the parallelling of the Grand Trunk line Toronto and east by the Canadian Pacific and Canadian Northern without any new territory being opened up and without any corresponding benefit to the public.

"Regarding sub-section D, paragraph 3 of the railroads' application; why should the revenue of the railroads east of Fort William be separated from their gross revenue? In other words is it fair, for instance, for the Canadian Pacific to separate a portion of their system as an argument for increases in rates and at the same time be one of the few corporations in Canada able to continue paying 10 per cent. dividends.

"The rates of freight on lumber by order of the Board 10.528 dated April 19th, 1910, were increased, since which time rates from this territory to Montreal were again increased from 12 to 20 per cent. and in addition thereto, the carload minimum on commodity tariffs covering lumber has been increased from an average of 30,000 lbs. to 34.000 or 13 per cent. by mutual consent. Very considerable increases in revenue to the railroads must have resulted therefrom. It is now proposed to abolish the summer rates from Ottawa Valley to Montreal and continue the winter rates the year round. This, with a further proposed increase of ½c. per 100 lbs. will make the domestic rate to Montreal from Ottawa 7½c. with an export rate of 6½c., other points in proportion, as against rates last summer of 6c. and 5c. respectively, meaning a flat increase of 1½c. in both cases; therefore from this territory to Montreal since the summer season of 1913 the increase will mean in lumber rates, 50 per cent.

"This matter seems to resolve itself into a question of revenue and cost of operation. The railroads in connection with all other enterprises in Canada have been confronted during the past year with a decreased revenue as compared with the prosperous years up to and including 1913. The conditions during the past year have been abnormal and should certainly not be urged as a reason for such increases in rates as those proposed. The earnings of the railroads jumped from $145,056,336 in 1909 ,to $256,702,703 in 1913, with operating expenses of $104,600,084 in 1909 and $182,011,690 in 1913; the relative percentage of operating expenses to earnings being 72.1 per cent. in 1909 and only 70.9 in 1913. From the Government blue book the percentage of operating expense to earnings in 1913 was exactly the same as the average for the previous 20 years i.e., 70.9, so that, with all the tremendous increases in wages and other costs entering into the calculation, the railroads as a result, no doubt owing to increased efficiency, were able to keep the percentage of operating expenses on an even keel in 1913.

The percentage of freight earnings to total earnings in 1909 was 65 per cent., as against 67 per cent in 1913, or an incerase of 2 per cent.

"Therefore, in conclusion, and bearing in mind that few lines of industry have been harder hit by existing conditions than the lumber trade, and the fact that we have paid several and severe increases in freight during the past few years, we are unalterably opposed to the proposed increases in rates on lumber, feeling that they are unwarranted and not justified."

### Strong Opposition From Montreal

Mr. Arthur Compbell, representing the Montreal Lumbermen's Association, said:

"Referring to the proposed advance of one-half cent per 100 lbs. on those lumber rates which are now 15c. or lower, as set forth in the application filed with you by the railway companies in connection with the proposed general increase in freight rates, we beg to make the following representations in opposition thereto:

"That lumber is a low grade commodity and should move at low rates, as it moves in large quantities—is loaded by the shipper and unloaded by the consignee—is shipped in both open and closed cars—is loaded to a high economic carload rate—does not require special or expedited movement—is not easily injured in transit and causes few damage claims.

"That as recently as April, 1910, the Railway Commission granted a very substantial increase in the domestic lumber rates (see Order 10528).

"That the building trade and other industries which use lumber most extensively are, for the time being, suffering from want of business and consequent curtailment of revenue, and any such advance as is proposed by the railways would, while helping the transportation interests, bear very heavily on all other interests concerned and tend to reduce rather than stimulate business.

"That while during the past few years the tendency of prices on all the supplies required by the railways in their operation and on most of the goods carried by the railroads has been steadily upward, furnishing an argument on behalf of the railroads in favor of increases in their freight rates, that condition has entirely changed and the general tendency, both on goods which the railway companies are required to purchase, and on the goods they carry, is now towards lower levels, and further, it is more than probable that the railways will be successful in their efforts to reduce considerably the wage scales under which a large number of their employees are now working.

"That for the foregoing reasons and many others which could be adduced, this Association begs to oppose most strongly any advance in the freight rates on lumber at this time, which we believe to be most inopportune in view of the already unsatisfactory state of the lumber trade."

At the same sitting the Board heard arguments from the railway representatives in favor of the putting into effect of the five per cent. advance in freight rates on International traffic, the result of the permission recently granted to United States railways to increase their rates on all lines east of the Mississippi, by the Interstate Commerce Commission. Judgment was reserved in this case.

The case for the railways in this case was explained by Mr. C. C. McCain, chairman of the Trunk Line Association of New York. Briefly it was that if the five per cent. was not applied to international traffic it would disrupt the relations between Canadian and United States lines.

Mr. Huff said that the five per cent. increase means an extra expense of nearly $15,000 per year to the Interstate Pulp and Paper Company, and if the Canadian railways were allowed to put the increase in domestic rates they are asking for into effect, it would

mean an added cost of $20,000 yearly. Mr. E. R. Bremner, of Watson and Todd, said the new rates, if allowed would mean an additional expenditure of $10,000 to his firm.

Further hearings upon this subject will be held by the Board at Montreal and Toronto. The Toronto hearing will take place, it is expected, early in April. Steps are being taken by the lumber interests to lay before the Board at Toronto a further presentation of the point of view of the lumberman. This presentation of evidence and argument ought to be made as strong as possible, as the situation is a critical one. The Canadian Manufacturers' Association, through their traffic department, are arranging to present the matter to the Board, and the lumbermen will co-operate with them.

# Export Opportunities Neglected

## Montreal Chambre de Commerce Surprised at Failure of Lumbermen to go After Transatlantic Prospects

Montreal, March 4th (Special to the Canada Lumberman): The Committee on woods and forests of the Montreal Chambre de Commerce—consisting of Messrs. F. Pauze, president of the Chambre; Leon Gagne, president of the committee, and R. Bedard, secretary—submitted a report at the meeting of the Chambre on March 3. In discussing the general situation as to the inquiry for Canadian woods, the report states that the Committee cannot but express surprise at the statement so generally made that the lumber and wood trade is actually declining, in view of the fact that enquiries are received every week, both by the Chambre and by the Minister of Trade and Commerce, at Ottawa, for Canadian wood in different forms. A short review of the various enquiries will give an idea of their extent.

The Society of Railroads of Greece, Athens, have made a request for 100,000 railroad ties; and although a dozen Montreal lumber merchants were notified of the opportunity to do business, the committee has not received a single reply from them. Some Edinburgh contractors, were asking for shingles. Mr. J. A. Maitrejearn, of La Varrene (Seine), was open to buy certain Canadian woods. A Paris lumber merchant, who annually imports a million francs' worth of lumber from Sweden, Russia, and Finland, states that he would be willing to purchase spruce. A Havana importer desires to purchase Canadian broom handles.

Those who regularly read the reports of the Department of Trade and Commerce are well aware that hardly a week passes without one or several inquiries for Canadian wood by foreign buyers, these orders being generally for railway ties or props for mines. So great is the need for ties in France, that the Societe Anonyme des Etablissements Carrel Aine, Rouche et Compagnie, 55 Rue d'Amsterdam, Paris, intend soon to send a commission to inquire in Canada, and perhaps in the United States as well, concerning the capacity for production of railway ties. The members of this commission are buyers for the State railways of France.

The "Canada Lumberman" recently announced that from one to five million ties are required for shipment to French and Italian ports, to be inspected and paid for at loading points. Besides this, Sir William Schlich foresaw the possibility, if the war should last for another year or two, of the English coal mines being closed for lack of props. While England imported 240,000 tons of wood for this purpose in September last, the greater part of this came from the west of France. England, however, was preparing to get this timber in Canada henceforth. For the Welsh coal mines of only one district, according to a statement of Osbeck & Company, of Cardiff, the normal yearly importation of wood for props is as large as 1,750,000 tons, or sixty-six million pieces 6½ ft. to 9 ft. long, and with a diameter of from 4½ to 8 inches. One ton of this timber is sold at $4.80 f.o.b., even during war times.

In a letter to the editor of the "Canada Lumberman" it was also stated that England would require from Canada large quantities of common wood for the manufacture of boxes, and a report of the Minister of Commerce dated February 15, stated that every kind of wood would be required by Great Britain. The London Board of Trade had published a report of the means of replacing timber for mine props which, before the war, had been imported from Baltic ports. In 1913 the chief sources of this supply had been Russia, France, Sweden, Portugal, Spain and Germany. This did not include the seven or eight hundred thousand tons of English wood used. and the total yearly consumption would thus be brought to 4,500,000 tons.

An English commission composed of the representatives of the Board of Trade, the Timber Trade Federation and the Mining Association, which recently visited this country, had established that Canadian lumber might be placed on the English markets at prices that could not be considered unreasonable.

While there is a strong foreign demand, our own country also consumes an enormous quantity of wood. In the year 1911 alone, Canada bought 13,683,770 railway ties, and it was estimated that ten millions would have to be replaced every year on lines in operation. In this manner there was a constant demand and one which could only go on increasing, with all other wooden articles, in a country being developed. It is noted, on the other hand, that in 1913 Canada imported wooden handles to the value of $71,214, fence posts and ties worth $1,856.711, blocks and unmanufactured wood, $1,001,717; shingles, $277,551, and firewood, $149,677. The committee is not ignorant that there are difficulties to be surmounted in the matter of transportation, but is ready to make an effort to remove these as soon as those interested have made known the exact nature of the difficulties they are faced with. To sum up, the demand is abundant and it seems that the supply is rather lacking. What will be the answer of the Canadian lumber merchants to the French Commission when it arrives in this country?

## Minister to Regulate River Disputes

A bill of considerable importance to the lumber manufacturing industry in Ontario has been introduced in the Provincial Legislature by the Minister of Lands, Forests and Mines. Briefly the bill gives the Lt.-Governor-in-Council power to declare by proclamation that any river, stream or creek to which the Rivers and Streams Act is applicable shall be under the jurisdiction of the Minister of Lands, Forests and Mines and that the Minister shall have power to determine, upon application to him by any parties concerned, questions arising in relation to such river, as to the right to construct or use improvements thereon; the respective rights of persons using the river for the purpose of floating timber thereon; and the right to interfere with, alter or obstruct in any manner the flow of the water in such river. The decision of the Minister is to be final. The bill also states that no person shall construct a dam, weir or other structure or work upon any river except with the permission of the Minister of Lands, Forests and Mines, and under such conditions as he may impose. The Minister is given power, if he deems it expedient, to have an inspection made of the rivers and to name an engineer for making the inspection. The Lt.-Governor-in-Council upon the recommendation of the Minister is empowered by the bill to make such regulations for the use and management of the work as he may deem proper. The Minister is given power to appoint an inspector to visit such river, or other rivers upon which improvements have heretofore been constructed, in regard to which it is deemed expedient in the public interest that the use of the water should be regulated so that all persons entitled to use it for lumbering, power or other purposes shall be given a reasonable and fair opportunity to do so.

Where any conflict or dispute arises between persons having the right to use the river or any works or any improvement thereon for lumbering, power or other purposes, the Minister may cause an inspection to be made and, upon receipt of the inspector's report, may appoint an officer to be in charge of the river or improvement or other works who shall have power to regulate the use of the river or any works or improvements thereon in such a manner as shall seem to him best calculated to afford the persons having diverse interests on the river or in the works or improvements a fair and reasonable use of the waters of the river.

Where it appears to the Minister that works or improvements on any river are in a state of disrepair he may, in writing, order the owner or occupier of such work or improvements to put them in proper condition for use and if the person named neglects or refuses to make the alterations or repairs the Minister may cause them to be made at the expense of the person named.

The main effect of this bill will be to simplify the matter of settling disputes between parties having diverse interests, such as lumber manufacturers and companies developing power who formerly were obliged to have recourse to expensive legal proceedings. When the bill is enacted they will be able to bring their disputes before the Minister and have them more expeditiously settled.

## United States Lumber Statistics

The National Lumber Manufacturers' Association in its report for January, 1915, gives general statistics compiled from information furnished by affiliated associations and non-member mills. Among the associations reporting are the Georgia-Florida Saw Mill Association (Inc.), the North Carolina Pine Association, the Northern Pine Manufacturers' Association, the Southern Cypress Manufacturers' Association, the West Coast Lumber Manufacturers' Association, the Western Pine Manufacturers' Association, the Hardwood Manufacturers' Association of the United States, the Michigan Hardwood Manufacturers' Association and the Northern Hemlock & Hardwood Manufacturers' Association. The report shows that the total cut from February 1st, 1914, to February 1st, 1915, was 11,072,600,000 feet, and the total shipments were 10,526,100,000 feet. The actual excess of the cut over shipments was 975,300,000 feet. The cut of January, 1915, was 79,400,000 feet less than the cut of January, 1914. The excess of shipments over cut during January, 1915, was 38,200,000 feet, and the excess of shipments over cut during January, 1914 was 45,600,000 feet.

# The Reader's Viewpoint on Trade Topics

## Credits and Collections—How a Wholesaler Keeps Down His Bad Accounts—A Uniform System Needed

**Articles or letters to the Editor of the Canada Lumberman, dealing with trade conditions, or discussing questions of interest to manufacturers, wholesalers or retailers of lumber are always welcomed by our readers. Here are a few that have been received lately:—**

### A Uniform System of Discount Needed

Editor Canada Lumberman:

Our lumber is sold on the following terms, 2 per cent. 30 days or 90 days net. This, of course, is optional with the customer.

We very seldom give a customer a renewal in full, it all depends upon the circumstances. We always try and make them pay half if possible and we will then take a renewal for 30 days for the balance of 8 per cent. interest.

We really have no system regarding the collection of our accounts except that we keep a pretty god tab on each individual customer and if he is not paying up the way he should, we get after him and try and make him pay up. If he cannot pay up in full we try to get security for the account. Of course some of them object to giving you this but we have been fairly successful, during the last few months in getting all our accounts secured.

We think that it would be to all our advantage if we could get the lumbermen of Canada together and arrive at a uniform system of discount and interest rates.

The usual terms that a manufacturer gives to us wholesalers are 2 per cent., 30 days or net 90, but, there are some who only give 1½ per cent., 15 days or perhaps 1½ per cent., 30 days or 60 days net.

It is pretty hard for the retail trade to get away from the 2 per cent., 30 days or net 90, and we think that there should be one uniform discount.

The reason that we charge 8 per cent. interest on renewals is that we have to pay 7 per cent. to our bank and we figure that it costs us 1 per cent. to make these renewals although we would sooner not have them.

We think that it would be a pretty hard matter to get the wholesalers together to make a uniform rate of interest and discount. For instance, the other day, we ran across a case where one wholesaler gave a customer 2 per cent., 90 days and another one six months.

There would be a better chance of arranging a uniform rate when times are good. Under the present conditions there are some dealers who are very anxious to get rid of their stock and will sell at almost any terms to dispose of it. This makes it very hard for us to try to sell a customer who has had those terms offered him. It is either meet them, or turn the order down.

Now, in reference to a feasible plan for exchange of credit information among lumbermen we have often thought this matter over but cannot see whereby a plan can be worked out.

We have often thought it would be a good thing if we knew just what the different retailers' liabilities were. We mean by this what amount they owed different wholesalers. The only way that this could be got would be to open up an office and have a man put in charge who could advise the different wholesalers each month as to the amount that different customers owed these wholesalers and in order to do this we would have to send in a list of the amount each owed us each month. We do not think that the different wholesalers would agree to a plan of this kind as it would have a tendency to let us all know who our big customers were and we are afraid that a plan of this kind would not work out.—Wholesaler.

### Keeping Down Unpaid Accounts

Editor Canada Lumberman: Exeter, March 2.

As our business has been established for a number of years in this part of the country we know practically all our customers and can therefore guard against having too much credit, which we know will not be paid, on our books.

As a rule we render all our accounts every three months and at the end of the year all unpaid accounts are rendered with 7 per cent. added interest from the beginning of the year until paid. When we find a customer who will not pay, we render his account each month and keep adding interest until he pays. By collecting in this way, knowing our customers and keeping as much to the cash system as possible, we have not lost $20 in debts not collected during the past ten years. In the wholesale trade our terms are thirty days, but we always find out our contractor's financial standing through our bank before quoting him. When we do not want his custom we do not quote, or we quote too high so that he will not accept.—Ross-Taylor Company, Limited.

### Insists Strictly Upon Security

Editor Canada Lumberman:

Net 30 days are our terms, and drafts are drawn at the first of each month, no matter if the man lives right next door to us. Anyone who cannot attend to these drafts, has to put up security to us, or else buy their goods elsewhere. They can always find somebody who is willing to take them on, and in that way we have the cream of the business, and our losses have only been three in four years.—Lumberman.

### New Brunswick Logging Operations

Mr. A. E. Loosen, manager of the Bathurst Lumber Company's mills at Bathurst, N.B., reports that there has been plenty of snow recently on the North Shore to complete the lumber operations of the past winter. The Bathurst Lumber Company, he said, was taking out from 35,000,000 to 40,000,000 feet, as usual, and had been hauling out for some time, on two feet of snow. The two mills at Bathurst will run as usual this year and he expects that the large new pulp mill below Bathurst will commence operations this summer, possibly in July.

Although the North Shore lumbermen have not been handicapped by lack of snow those along the Coast of the Bay of Fundy have been less fortunate. The Pejepscot Pulp & Paper Company have 8 000,000 feet on the yards in St. John and King's Counties and prospects for getting it off are poor. In Albert and Westmoreland Counties it was feared, early in March, that a large quantity of logs would be hung up unless more snow arrived. On the Upper waters of the St. John it was reported that there was plenty of snow to carry the hauling operations through unless the break up came too early.

Reports from Doaktown state that there will not be any logs left in the woods by the operators on the Miramichi River, although at first it was feared that the recent rains, by interferring with hauling operations, would result in a considerable hold-up. The latest reports were to the effect that most of the lumbermen had completed their season's operations and that the others were expected to finish shortly.

McLaggan Brothers, of Nashwaak, who have been carrying on lumbering operations a few miles below Woodstock, were among the first crews to complete their winter's work. They had a contract to cut 1,000,000 feet of lumber for Frasers, Limited, and completed this work on February 24th. The lumber was put in Great Creek, ready to be taken to the company's mill in the spring.

The lumbering operations on the Nasshwaak River have not been hindered to any great extent by the recent heavy rains, according to Mr. E. B. Staples, manager at Marysville for the Partington Pulp & Paper Company. Mr. Staples stated that the Partington company's operations would amount to 16,000,000 feet on the Nashwaak this year.

### B. C. Shingles in U. S. Market

In an article discussing the sale of Canadian shingles in the United States, a Western United States lumber trade journal recently made the following interesting comment:—Naturally the tariff removal has had much to do with the increased use of the Canadian-made shingle in the United States, even in times of market depression, but another very strong factor is that British Columbia mills pay salesmen and commission men five cents a thousand for selling their shingles in American markets as against three cents a thousand paid for selling the American-made shingle. On a car containing two hundred thousand shingles this amounts to ten dollars commission from the Canadian manufacturer as compared with six dollars a car from the American shipper. There are more than twelve hundred salesmen and commission men selling shingles in the United States, and, under the circumstances, it is natural for these men of the road to sell the best revenue producing article. Under higher prices for raw material and higher wages, it is doubtful if the American shingle producer can afford to pay the commission offered by the Canadian. A tariff on the Canadian article might make the competition more equal, but, in any event, it is salesmanship rather than quality that is accounting for seeming popularity of the imported shingle.

A report from Everett, Wash., states that every lumber and shingle mill in the city and near-by towns is in operation and that the majority of the logging camps are resuming operations or preparing to do so.

## Toronto Lumbermen Form Board of Trade Section

The lumbermen of the city of Toronto held a meeting on Friday, March 5th, in the Board of Trade, at which the organization of a lumbermen's section of the Board of Trade was completed. A large number of lumbermen were present, representing all branches of the trade and industry in Toronto. Previous to the meeting, a luncheon was served.

Mr. J. L. Campbell, of Campbell & Johnson, Toronto, was chairman of the meeting and called upon the secretary to read a letter from the Board of Trade in regard to the application of the lumbermen for permission to form a section. This letter stated that the application of the lumbermen had been placed before the Council of the Board and the desired permission had been granted. The by-laws of the section as drawn up at a previous meeting of the lumbermen had also been approved.

On the motion of Mr. Wm. Lovering, seconded by Mr. W. J. MacBeth, it was then unanimously decided to form a Lumbermen's Section of the Board of Trade. It then became the business of those present to elect officers for the Section. On motion of Mr. MacBeth, seconded by Mr. Boake, Mr. J. L. Campbell was elected unanimously as chairman. The next office to fill was that of vice-chairman, for which a number of names were put in nomination. The election resulted in Mr. G. W. Boake being chosen on the first ballot. The other officers were elected unanimously as follows:—treasurer, J. B. Reid; secretary, H. Boultbee; executive committee, John Donogh, A. E. Clark, W. J. Hetherington, A. C. Manbert and James Lauder.

The only other matter of business to be attended to at the meeting was the consideration of the by-laws which had been passed at a previous meeting and had been sanctioned by the Board of Trade. The by-laws were taken up clause by clause and adopted with a few amendments. The first amendment related to membership. According to the draft by-law, the membership was to be composed of "manufacturers of lumber and dealers in lumber who are members in good standing of the Board of Trade, etc." This was amended to read as follows:—"manufacturers of lumber, and dealers in lumber or representatives of the foregoing, who are members in good standing of the Board of Trade, etc." The idea of this amendment is to widen the membership so as to make sure that lumber salesmen are eligible.

Another amendment was passed changing the time of the regular meetings, so that they are now to be held at 1.30 p.m., on the third Friday in each month excepting July and August. Previous to these meetings the members will hold a luncheon at 1 o'clock.

## Urges Co-Operation to Secure Wartime Orders

A prominent Vancouver business man is urging millmen, loggers and towboatmen and the representatives of labor to get together to see if more of the large war contracts for manufactured lumber cannot be "landed" for B C. manufacturing plants. "I happen to be in as close touch with conditions amongst Washington State mills as I am in British Columbia," he says, "and the way it looks to me is that all the interests involved on this side should try to join hands if they wish to get the big contracts that are now going around. Demands for hundreds of millions of feet will undoubtedly be filled on this coast within the next year or two and we should leave no stone unturned to get a good part of this business. Conditions regarding labor and prices to the men who own the timber are such, however, that unless we look very sharp about it the manufacturers on the other side are likely to underbid us. The point I wish to emphasize is that it would be far better for our manufacturers, loggers and labor people to do the work and supply the material just for the sake of keeping going and having the money circulated here than for us to calmly fold our hands and allow the United States mills to get away with everything. I know that Washington mills are putting in bids for some of these big orders at prices which are away down, at actual cost and in some cases lower. They are doing this just for the sake of realizing the cash. I think a great deal could be done here if the various interests involved would meet and get down to a basis where, even if there were no particular profit to anyone concerned, it would allow a price that would enable our manufacturing plants to reopen and several thousand more men would be given employment that would help conditions greatly during the present year. I know of one firm of towboatmen who will furnish lighters rent free and who will give their tugs for what it costs for fuel and wages for crews. That is a start and along this line we might be able to work up to a point where our mills could afford to underbid the plants on the United States side."

A report from St. John, N.B., states that Atlantic freight rates for deals have reached the unprecedented figure of 136 shillings per standard. At the outbreak of war the rate was fifty shillings and quickly jumped to eighty-five, then 100, then 115, and to-day 136 was offered for a steamer. The high rates have brought a large number of sailing vessels in the market and they now command 110 shillings.

## A Successful Lumberman's Business Policy

A Pioneer Lumberman

The accompanying photograph is an excellent picture of Mr. Beaver, a successful descendant of the Pioneer Lumberman of North America.

On being interviewed recently as to his view on the lumbering situation he said:

Our family still control very extensive tracts of virgin timber and, as we do not require financial assistance from the banks, we are retaining our skins, and our season's operations will be about normal.

To what do you attribute your success Mr. Beaver?

To the fact that **we never did more business than we could finance ourselves.** Being free both to work and manage our own business, instead of being worried to death by the banks about financial matters, and by expert advice and suggestions from bank boys as to how operations should be conducted, makes the difference.

We expect the demand in our line of business will increase as soon as the war is over.

## Pacific Lumber Inspection Report

The annual meeting of the Pacific Lumber Inspection Bureau was held recently at Seattle, Wash. Reports of the officers were presented. Two changes were made in the Board, one of which was the election of Mr. E. J. Palmer, Victoria Lumber Company, Chemainus, B.C., to fill the vacancy caused by the death of Mr. R. H. Alexander.

The secretary's report showed that the total inspections of water-borne and rail shipments for the year amounted to 1,300,301,169 feet b.m. of lumber, lath and pickets, a decrease of 139,398,439 feet as compared with the year previous. On the water-borne shipments the loss was 140,746,706 feet and on the local shipments 1,518,097 feet, inspections on rail shipments increased 2,866,364 feet. The amount inspected during 1914 is divided as follows, together with a comparative statement showing gain and loss over the amount inspected during 1913:

| | 1914<br>Feet B.M. | 1913<br>Feet B.M. | Gain<br>Feet B.M. |
|---|---|---|---|
| Foreign | 486,964,160 | 527,358,085 | *40,393,925 |
| California | 687,774,072 | 808,201,912 | *120,427,840 |
| Domestic ports | 92,302,519 | 72,227,460 | 20,075,059 |
| | 1,267,040,751 | 1,407,787,457 | *140,746,706 |
| Rail (1,374 cars) | 33,260,418 | 30,394,054 | 2,866,364 |
| Local | ..... | 1,518,097 | *1,518,097 |
| Totals | 1,300,301,169 | 1,439,699,608 | *139,398,439 |

*Loss.

The following is a comparison of the total amount of water-borne shipments, with the amount inspected:

| | Shipped 1914<br>Feet B.M. | Inspected 1914<br>Feet B.M. | Not Inspected 1914<br>Feet B.M. |
|---|---|---|---|
| Foreign | 508,606,327 | 486,964,160 | 21,642,167 |
| California | 1,074,535,466 | 687,774,072 | 386,761,394 |
| Domestic ports | 110,479,399 | 92,302,519 | 18,176,880 |
| | 1,693,621,192 | 1,267,040,751 | 426,580,441 |

A large gain is to be noted in the inspection of foreign shipments. The uninspected foreign shipments in 1913 were 12 per cent. of the total amount shipped; whilst in 1914 the amount uninspected is only 4½ per cent., a gain of 7½ per cent. being made. On the total amount shipped and inspected a gain of 2½ per cent. was made over 1913—the percentages being 27½ per cent. for 1913 and 25 per cent. for 1914.

The uninspected foreign shipments are largely made up of shipments of creosoted ties to India on which inspection was not required.

During the year the bureau issued certificates on 1,374 cars of rail shipments, covering 33,260,418 feet. This class of shipment shows an increase of 2,866,364 feet over 1913. The increase would have been greater but was curtailed owing to the shutting down of mills who were availing themselves of the services of the bureau.

# B.C's. Trade Troubles Done into Verse—Also a Prose Contribution on the Same Subject

A fool there was and he made his prayer
(Even as you and I!)
He left pursuits that had prospects fair
And joined the crowd at the golden stair
That leads to Mount Castle de Millionaire
(Even as you and I!)

He reached the stair in the greatest haste,
Where many were now by each other chased
(And he did not understand;)
He did not know and he never could know
Just why this mountain had such a glow
(To him from a distant land!)

Then a whirlwind came from a far off land
(Far from you and I!)
So swift did it blow that the air it fanned
Grew hot and still hotter, 'till rational man
Aghast stood and marvelled, could not understand
(Neither could you nor I!)

The people all wondered at what it all meant,
And in their amazement much money was spent
(Was sown in the wind that blew!)
We knew it was wrong, for it couldn't be right,
But what did it matter with plenty in sight?
(Even to me or you!)

But fools there were in the days of old
(Greater than you or I!)
With foolish ambition and courage bold
They started a tower to heaven, we're told,
A short circuit route to the City of Gold
(But didn't get very high!)

But the fools of then as fools today
(When in elements far too high)
Grew foolishly bold in their thoughts of gain,
And on flatterings doled they lost their brain,
And with thoughts of gold became insane
(And returned to earth with a sigh!)

Oh, the years we waste, and the tears we waste,
And the work of our head and hands,
As we try to climb to the mountain bold;
To the phantom treasure of rarest gold,
As we scale the wall to the stranger's fold,
(And do not understand!)

Oh, the toil we lost, and the spoil we lost,
And the excellent things we planned;
While the crowd grew large and larger still,
All clamoring wildly to reach the hill,
With money from somewhere to pay the bill;
(Yet we did not understand!)

And it isn't the shame, and it isn't the blame,
That stings like a white hot brand;
But the thought that we are quite at sea,
And the voyage rough in a high degree,
And as measured up by the rule of three
(Only two can stand!)

A fool there was, and his goods he spent,
(Even as you and I!)
With honor and faith and sure intent
The money we borrowed was freely spent,
For a fool must follow his natural bent
(Even as you and I!)

And now we know that we never could know,
As long as the rabble was rabbling so,
(Could not even understand!)
But the joys of our foolish days have fled,
And we find we are now many years ahead
(Of where we can safely stand!)

So while we are hoping, we patiently wait,
(But cannot understand!)
While the hand of destiny changes the slate
That changes our destiny not by our rate,
But by the conception of destiny's mate,
(Who thinks he can understand!)

We have read many fables of long, long ago,
From mythical depths where but fables can grow;
(To guide both fool and man!)
But we never did know, and we never will know,
Why all of the flock go where leader sheep go;
(And we never will understand!)

'Tis a cursed achievement so many have made,
(And they could not understand!)
Why a mountain looming so high in the shade,
From various walks in business or trade,
Pursued by exploiters should vanish or fade;
(And they do not understand!)

God in His wisdom made all things, we're told;
(Even made you and I!)
Made men to run saw mills, and some to dig gold;
Made farmers and bankers, and tradesmen of old;
All for the good purpose for which He did mold;
(Even as you and I!)

If nothing without some good purpose was made,
(Then fools have a place in the land!)
But why they were made or allowed to invade
What without them might be a legitimate trade,
And turn it from upward to a downward grade,
(Gold only can understand! ! ! ! ! !)

## Reconstruction Essential for Permanence of B. C. Lumber Industry

Editor Canada Lumberman: Grand Forks, B.C., March 2nd.

There must be a reconstruction of the lumber industry in British Columbia, before general confidence is established, and before the manufacturers can operate with a profit. Until such time as CONFIDENCE has been established, the mills must remain idle, chiefly because men of large resources and bankers will not continue to make advances to a losing game.

In order to reconstruct the industry, it will be necessary to determine some of the causes which have brought this immense industry into financial ruin, and the causes of the lack of CONFIDENCE by the general public.

1. In former years the British Columbia coast mills exported to Australia and New Zealand, 90 per cent. of the lumber used, which later, owing to the difficulty in securing adequate transportation, has dropped in 1914 to 6 per cent.

2. The personnel of the British Columbia Forest Board have not all been practical Canadian lumbermen, acquainted with the difficulties and hardships confronting the manufacturer. Over their signature, statements were made that the lumbermen were making large sums and could readily stand a royalty of even $4.00 per thousand feet. In consequence of these opinions, burdens were imposed. The lumber associations of British Columbia opposed any additional burdens, claiming that the industry was not remunerative. An agreement was made by the Forestry officials and the associations whereby chartered accountants were to examine the books of the largest operators for three years previously. Before the accountants were through with the examinations, the results were so discouraging to the forestry officials that the investigation was dropped, in spite of which the burdens were still increased, thereby causing general anxiety among the manufacturers and the bankers.

3. Owing to the over-production of lumber in the United States and the depressed state of their market, lumber is being dumped into Canada at much less than the cost of production. The costs of manufacturing in British Columbia are higher owing to many disadvantages, not the least being that supplies of all kinds cost more than in the United States and upon which the Canadian lumbermen and other consumers have to pay a duty. The settlers on the prairies receive no benefit by the importation of United States lumber as the manufacturer does not and cannot sell to the consumer. The imports of United States lumber into the Dominion and into western provinces especially affected, in 1912, reached the enormous amount of 550,000,000 feet, valued at nearly $10,000,000.

4. Under-consumption, which caused price cutting by unwise sales managers.

The result of this LACK OF CONFIDENCE in the industry in British Columbia today is:

(a) Three hundred and fifty idle mills.

(b) Sixty thousand employees looking for work from other industries.

(c) Millions of money invested lying dormant, and numerous

families of the unemployed and hundreds of merchants adversely affected.

The war in Europe has not been responsible for the serious state of affairs now existing, but has brought to light the facts. If CONFIDENCE could be re-established, the war would be a financial benefit to British Columbia.

Is there any future bright outlook for the lumber industry? Absolutely none, unless the entire industry is re-constructed.

In order to restore CONFIDENCE to the industry, the following policy is submitted for consideration:

1. Endeavor to secure a subsidized line of steamships for the export trade.

2. Appoint men of national reputations as practical Canadian lumbermen to the Forestry Board in British Columbia.

3. Increase the personnel of the Forestry Board of British Columbia by the addition of two practical lumbermen, one from the interior and one from the coast, to act in an advisory capacity only. The expert knowledge of men experienced in the various phases of the lumber industry throughout the province would necessarily prove of great value to the Board.

4. In every district in British Columbia in which the lumber industry predominates, send practical lumbermen as representatives to parliament.

5. Procure a measure of fiscal protection to the largest and only natural industry un-protected in Canada.

6. Establish an organization with ample capital to market the product, thereby increasing the ratio of the annual cut of lumber to the annual growth of the timber, which is estimated at six and one-half billion feet.—Western Pine Lumber Company, Limited. Per W. Mark DeCew, Vice-President and Manager.

# B.C. Premier Predicts Great Future

### Believes Revival of Lumbering Industry will Come Soon and Declares Government Will Foster it Vigorously

An important discussion took place in the British Columbia Legislature recently in connection with the bill introduced by the Government to modify the provisions of the Forest Act in relation to special timber licenses. Sir Richard McBride in referring to the bill, pointed out that the people of British Columbia were, by the regulations of the Government, and by legislation placed on the statute books governing the issue of timber licenses and the collection of royalties, for all time co-partners in the timber industry, and in that way were most vitally concerned in the welfare of those engaged in the industry.

Mr. Parker Williams attacked what he claimed was the principle of the bill. It was his view that the people who had in 1905 and 1906 taken up large areas of timber lands were not able to hold on to them and keep up their payments and the bill was a means of affording them relief. He opposed it, because, he asserted, the men who wanted it knew very well long before the war that they had got themselves into a corner by their greediness in trying to grasp too large a slice of the natural resources of the country.

The principle of a moratorium was to give relief from conditions arising through the war, but the conditions in the timber industry had started long before the war. The lumbermen were always in difficulties, and it was on record that the House for the past five years had been dealing with timber matters, and last session had passed what was said to be the last word in such legislation. Now these timber men were back again for relief.

Mr. Williams went at some length into what he alleged was the history of a large lumber concern, composed of Americans, who had operated in British Columbia for some years, and who, instead of building up and developing an industry, had in reality, at every turn, taken money out of it until now, with assets of over $7,600,000, of which $5,500,000 was a part of the timber resources of this province, they were said to be in extreme difficulties. He charged their troubles entirely to extravagant cost of management, and placing it in the hands of men not qualified to handle it. He said that no doubt if other similar concerns were investigated, as he thought they should be, a similar condition of affairs would be found to exist. "When we find that no conditions brought on by the war had landed such people where they are," said Mr. Williams, "I do not think we should help them hold up the natural resources of the country. I do not think it is any part of the duty of this House to save them from the consequences of their own folly."

Sir Richard McBride answered the member for Newcastle with some vigor. He had listened he said, to a somewhat severe criticism of the Government's proposal to grant some relief to those who had invested in the timber of the province. Instances of unscrupulous speculation, it might be true, had occurred. But that was no reason for condemning the whole industry. In a wide field like British Columbia where money had been invested in timber, most of the investments had been sound through and through. When business was good and orders free, there was a tendency to promote development as freely as conditions would permit. In the past few years millions had been put into timber in British Columbia.

While on account of present-day conditions there might be some criticism of timber investments, he was satisfied that every dollar put in had been on a sound business-like basis. It was the duty of the Government, and ever since his Government had been in power it had been their aim to protect outside investors who had brought in such large amounts of money and with that in view the policy of the Government had been to raise the legislation on this important question to the very highest standard. The bill before the House was quite consistent in scope and policy with the other legislation now in force, dealing with the timber industry.

With the handicap of present market and transportation conditions, the situation had become more burdensome, and it was the object to endeavor to relieve this situation. In the last four years the output had not only doubled, it had quadrupled, and the policy of the local government in putting an embargo on the export of logs, had been a large factor in this splendid increase. The course of the Government in the timber industry had been consistent with their policy of endeavor to protect the farmer, the merchant, and others engaged in the development of the province.

"Is it not in keeping with the traditions of Parliament," asked Sir Richard, "to stand by the people who have had faith enough in us and in our institutions, to invest heavily in this resource of the province? There is nothing behind this measure, but the idea of British fair-play." He could not for a moment subscribe to the view expressed by the member for Newcastle. The wonderful timber resources of British Columbia had attracted some of the best and finest mill-men in the country. The province, as a whole, was interested in the licenses, and in the royalty collected on the annual cut. It was a condition of co-partnership, and the premier predicted that through the wise policy of the Government, in a few years the people's share would be enough to nearly meet all necessary revenue requirements for carrying on the civil government of the province.

There was another point the people should be mindful of. Apart from the portion alienated there were large areas of the finest timber reserved still intact, the property of the province. Five years ago a general reserve had been placed on all unlicensed or unsold timber and this had been kept up with some small exceptions which had arisen in the working out of the departmental regulations. There were still millions and millions of the finest timber, the property of the people. He referred to the statement of Mr. James J. Hill a few years ago, that the United States had only sufficient timber for another 25 years, which situation he accounted for through increase in consumption and from waste. With the measures in force for the preservation and protection of British Columbia timber resources the day was not far distant when British Columbia would control a large part of the world's output of timber. The completion of two new transcontinental railways and the opening of water transportation by the Panama Canal, were large factors in assuring future prosperity in the timber trade.

At present there were difficulties, arising through conditions in other markets, and through lack of charters for export cargo, as well as through the present financial situation. Many delegations and individuals had called on the Government and the whole matter had been freely and frankly discussed. He thought the House was simply discharging a duty it owed the province as well as to those who are customers in the measure proposed. He looked to see a quick return of good times in the timber industry. Indications from the prairie were encouraging, and water transportation via the Canal was bringing us in touch with markets hitherto closed. Last but not least was the prospect of reciprocity with Australia, which would open up the timber market there for us. The latest news he had was that progress was being made along the lines urged by Sir George Foster, and it seemed as if Australia would respond with a measure which would be satisfactory and effective.

---

### Lumber Commissioner Going to Australia

Mr. H. R. MacMillan, Chief Forester for British Columbia, is on a visit to Ottawa and it is reported that the purpose of the visit is to discuss with the Dominion Government proposals for seeking a preference in Australia for British Columbia lumber; and that Mr. MacMillan himself will be sent to Australia to arrange, if possible, an agreement with the Australian Government on this subject. It is further reported from Vancouver that a company is being organized in Vancouver to build and operate a fleet of lumber carriers with a view to promoting the export of British Columbia lumber to Australia. The British Columbia Government is bringing its influence to bear upon the same subject. More than 200,000,000 feet of lumber are annually imported by Australia and of this total only four per cent. is supplied by British Columbia.

---

Heavy rains during the first week in March caused such conditions on the Keswick River in New Brunswick that two sawmills were obliged to stop their operations on account of the high waters.

# Electricity in the Lumber Industry

## An Account of the Rapid Development of Electric Drive to Logging and Manufacturing Operations—Typical Installations Described

By E. F. Whitney*

The first comprehensive application of electric drive in the different branches of the lumbering industry are of such recent date, and the individual installations vary to such an extent, that no general treatment of the subject could be undertaken until more well-defined practices were settled upon.

Not more than four years ago a completely electrically-operated sawmill was considered a hazardous undertaking; today, a new mill adopting other than the electric drive is the exception. The results of such operation have been so gratifying that today we can show two large and successful sawmill companies operating entirely from central station service, in spite of the large amounts of refuse available for fuel.

The first completely operated mill was put in operation about 1908; the total installation consisted of 800 h.p. connected load, with a generating plant capacity of 600 kw. The first electric logging engine was put in commercial service in 1912. The electric railway, used solely for logging purposes, is yet to come.

Before the above date many special machines—and often complete planing mills—were driven electrically, but none were willing to pioneer such drives for the heavy duty sawmil machinery required for Coast conditions. There is necessary today but one further step, viz., a drive for the cumbersome log carriage that will compare favorably in first cost with the simple twin engine, and the necessity for steam will be entirely banished from the milling branch of the industry.

The lumbering industry, as a whole, must be divided into two distinct classes of work for our consideration: logging and milling.

### Logging

In the branch of the industry embraced under the heading "logging," progress in the application of electric drive was very slow. It is only of recent years that power-driven logging machines have met with general favor, supplanting the old ox team. The flexibility of steam engines under the very severe demand imposed in such work, was thought to be an insurmountable obstacle to the adoption of any other system; for instance, the loggers demand an equipment which can stand very heavy overloads momentarily imposed and which, at the same time, has flexibility enough to allow the progress of the log to be stopped almost instantly should it encounter an obstacle.

At the present time it is estimated that there are approximately 3,000 steam-driven logging engines in the two states of Washington and Oregon. Most of these outfits are twin-cylinder engines approximately 10 by 12 in. (25.4 by 30.48 cm.). The average operating boiler pressure is 160 lb. (72.5 kg.) gauge, so that they have great capacity for intermittently imposed heavy overloads. From the viewpoint of electric operation this requires a motor which will seldom come anywhere near its continuous capacity, but which will frequently be called upon to exert its maximum torque.

In these two states the operating companies total 532, with an output of 7,080,000 M. ft. (board measure) or about 23,600 M. ft. (board measure) per day. The scene of their operations is often far removed from railroads; in the above operations the average distance from the scene of logging operations to the mill or to tidewater, varies from one to 35 miles (1.61 to 56.3 km.). The average distance is approximately 15 miles (24.15 km.). The maximum distance of which we have record that logs are handled by rail in either of these two states, is 120 miles (202.1 km.), and by towing—after reaching tidewater—125 miles (210.1 km.).

An added drawback to the use of electricity in the camps was discovered in the distance of the operation from the centres of power generation or present transmission lines.

Logging operators demand the simplest possible outfit, which necessitates the adoption of alternating current for such work.

The average cost to the logging company of logs at the boom is approximately $8 per M. ft. board measure. This is divided approximately as follows:

| | |
|---|---|
| Fixed charges | 17 per cent. |
| Logging (including felling trees, gathering and loading) | 50 per cent. |
| Hauling by rail | 11 per cent. |
| Handling at boom (including unloading, sorting, rafting and towing | 9 per cent. |
| Stumpage | 13 per cent. |

We therefore see the great expense to the logger in felling the trees and gathering them from the woods, and in hauling them to tidewater. It is in connection with these two items that electricity has its greatest possibilities.

*Reprinted by courtesy of The American Institute of Electrical Engineers.

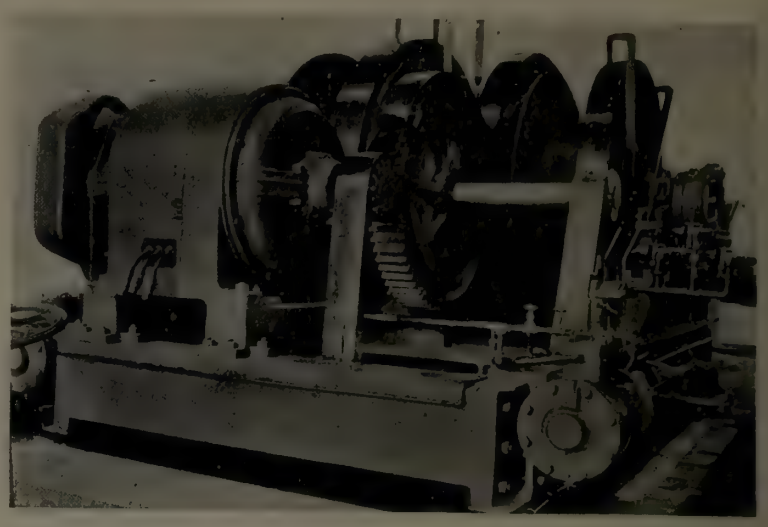

Fig. 1—Front End, Electric Logging Engine

There has been developed, for the logging engine, a motor which has all of the characteristics demanded, viz., heavy construction; ability to stand severe overloads; ease of control and no complicated parts. After exhaustive tests the Potlatch Lumber Company put the first two electric logging engines into commercial operation in 1912. These outfits operate on an overhead system, lifting the logs from the ground and letting them come in practically by their own weight in hillside work, or pulling them in when working in flat country.

### Motor Equipments

The motor equipment shown in Fig. 1 is adjustable-speed 150-h.p., 600-rev. per min. synchronous speed, 550-volt, three-phase, 60-cycle induction motors. Power is received at a portable transformer sub-station—one sub-station for each equipment—at 11,000 volts and is stepped down to 600 volts for use at the motor. Rubber-covered armored cables run along the ground from the sub-station to the motor, the distance never exceeding 1,000 ft. (304.8 m.).

In order to prevent mechanically over-taxing the equipment, an inverse-time-limit overload oil switch is set to give prectically instantaneous operation when the pull upon the main cable reaches its breaking strain. For quickly starting or stopping and to prevent overwinding the cable, a solenoid brake is mounted on the front end motor shaft extension.

These outfits are also called upon to load the logs on cars and to spot the cars, and even under these conditions the electrically-operated outfits hold the camp record for a day's operation, viz., 55,000 ft. board measure, gathered and loaded by one logging machine in one day. This quantity is comparative only to this company's other operations; the capacity of steam donkeys under similar circumstances is 40,000 ft. per day.

The following table gives representative performance figures for the various operations:

| Work Peformed | | Input | Duration |
|---|---|---|---|
| Tightening standing line, 2,800 ft. of 1½-in. steel cable | | 260 kw. | 10 sec. |
| Running trolley out | Accelerating | 100 kw. | |
| | Running free | 35 kw. | 40 to 60 sec. |
| Pulling trolley in with logs; | | | |
| 1 log, 800 ft. b. m. | | 70 kw. | 40 sec. |
| 4 logs total 2,000 ft. b. m. | | 145 kw. | 65 sec. |
| 3 logs, total 1,600 ft. b. m. | | 210 kw. | 60 sec. |
| 1 log, total 1,100 ft. b. m. | | 85 kw. | 70 sec. |
| 1 log, total 1,800 ft. b. m. | | 95 kw. | 90 sec. |
| Loading logs on cars | max. | 100 kw. | |
| | min. | 70 kw. | 3 to 5 sec. |
| | avg. | 85 kw. | |
| Moving cars | max. | 225 kw. | |
| | min. | 25 kw. | 3 to 5 sec. |

In all of the above operations the load is of short duration, so that the daily energy consumption is small. For a 10-hour day approximately 400 kw.-hr. are consumed gathering and loading 50,000 ft. b. m.

Of late, a great deal of attention has been given to the use of oil fuel and coal, as well as wood, for logging engines, and in order to see the comparative operating costs the following figures, covering

fuel and labor for a logging engine only, have been prepared. These figures are based upon operations under similar conditions in the same camp and doing the same general work.

| | |
|---|---|
| Average quantity handled per day | 76,200 ft., b. m. |
| Average distance of yarding | 670 ft. (204.2 m.) |
| Average size log | 1900 ft., b. m.* |
| Average time per log | 15 min. |
| Average wood burned per day | 1650 ft., b. m |
| Average fuel oil per day | 8.8 bbl. (11,192 liters) |
| Average coal per day | 2½ tons (2.245 metric tons) |
| Electric power energy consumption | 475 kilowatt-hours. |

Outfit working 70 per cent. of time—delays 30 per cent. of time.

| | |
|---|---|
| **Electric Operation:** | |
| 475 kw.-hr. at 1½c. per kw.-hr. | $ 7.13 |
| One motorman | 3.75 |
| Total per day | $10.88 |
| **Oil Operation:** | |
| 8.8 bbl. at $1.15 per bbl. | $10.12 |
| Engineer | 3.75 |
| Water—(based on ¼ of pumping engineer's time and ¼ fuel consumption for pumping engine) | 2.67 |
| Total per day | $16.54 |
| **Coal Operation:** | |
| 2½ tons at $4.25 | $10.62 |
| Engineer | 3.75 |
| Water (see Oil Operation) | 2.76 |
| Total per day | $17.13 |
| **Wood Operation:** | |
| 1,650 ft. b. m. at $7.00 per M. | $11.55 |
| Engineer | 3.75 |
| One wood bucket | 2.75 |
| Water (see above) | 2.88 |
| Total per day | $20.93 |

The fuel costs given above are arbitrary and are taken as general averages. It is questionable whether oil and coal can be delivered to the donkeys for such a low price, considering all items—handling, storing, pumping, etc. Without doubt, the cost of fuel would be higher than the value assumed, in the majority of operations. The cost of wood for fuel is estimated as follows:

| | |
|---|---|
| Stump value | $2.50 per M. |
| Logging cost | 4.00 per M. |
| Extra cost for placing behind donkey | 0.50 per M. |
| Total | $7.00 per M. ft. b.m. |

The higher interest charge in the case of electric operation due to first cost of transmission line, sub-station, etc., is more than offset by the very much greater depreciation in the case of steam-operated outfits. No attempt has been made to cover this item for all cases. As a conservative estimate, however, the maintenance of a logging engine boiler 72 in. diameter by 144½ in. long, with 374 two-in. tubes, is not less than $200 per year, and in view of the severe service its useful life will not exceed eight to ten years.

Averaging the above costs for fuel and labor, with oil, wood and coal, shows a net saving of $7.35 per donkey per day in favor of electric operation.

An electric unloader is used which dumps the logs from the cars at tidewater. This is operated by a 37-h.p. hoist motor, and unloads 30 cars, each containing 7,000 ft. b. m., in approximately 20 minutes. This time includes that necessary for spotting the cars at the log dump. This unloader used a total of 90 kw.-hr. for unloading 4,000 M. ft.

### Logging Railways

Usually the country to be tapped is rugged and mountainous, necessitating heavy grades and sharp curves. Track construction is as light as possible. As a general rule the grade is in favor of the load and in most cases very little energy is required on the down or loaded trip. Oil is the common fuel. Because of the grades encountered slow speed locomotives find a wide use, the slow schedule speed requiring train operation almost continuously during working hours. The lengths of these roads are usually very favorable to electric operation, allowing a round trip to be made in a reasonable time and not necessitating a train of excessive length.

In only three of the thirteen counties in Washington and Oregon which produce 88 per cent. of the timber in these states is the average length of haulage less than thirteen miles. An average of the thirteen counties shows a main line length of 15.2 miles. The maximum grades are usually from 5 to 7 per cent. for an appreciable distance, with curves up to 20 degrees. The average grade through the line is seldom less than 2½ per cent. and spurs leading to the different camps have even heavier grades and sharper curves.

An analysis of operation is very favorable to electricity, as will be seen by the following data, which give conditions of a typical road:

| | |
|---|---|
| **General Data:** | |
| Length of line | 21½ miles |
| Average grade with load and against empty cars | 2 per cent. |
| Maximum grade, including equivalent friction for curves. | 5.5 per cent. |
| Gauge of track | 4 ft. 8½ in. |
| Weight of rails | 60 lb. |
| Loaded cars to be delivered per day | 75 |
| Weight of car empty | 18½ tons. |
| Weight of car loaded | 50 tons. |
| **Operation** | |
| Weight of locomotive | 60 tons. |
| Cars per train either direction | 9 |
| Total weight of train uphill, one locomotive | 226½ tons. |
| Total weight of train downhill, one locomotive | 510 tons. |
| Total time for round trip without layovers or switching. | 144 minutes. |
| Schedule time for round trip | 3 hr. |
| Round trips per locomotive per day | 4 |
| Ton-miles per round trip | 15,800 |
| Ton-miles per day—8 round trips | 126,400 |
| Ton-miles switching | 6,500 |
| Kilowatt-hours per day at locomotive | 6,110 kw.-hr. |
| Kilowatt-hours per day from high-tension bus | 9,050 kw.-hr. |
| Ave. load per day of 12 hours from transmission system | 754 kw. |

Three locomotives are required for this service, two main line and one for switching.

With 1200-volt electrification, two 500-kw. sub-stations will care for the power demand. The total approximate cost of the locomotives, sub-stations, transmission line, overhead, bonding and feeders is $190,000.

For similar operation with oil-burning locomotives, two 125-ton standard slow speed freight locomotives and four 50-ton geared type locomotives are required, and even with this equipment the train must be broken at the heaviest grade, necessitating a return trip for a portion of the empty train which starts from the terminal.

The locomotives burn oil fuel, which costs approximately $1.15 per barrel for main line locomotives and $1.20 per barrel for switching locomotives at the logging camps. Electric power can be purchased for 0.9 cent per kilowatt-hour net.

The following table of maintenance and operation, omitting those items which are approximately the same under the two conditions, shows a net saving of $20,068 per year with the electric railway:

| | Electric | Steam |
|---|---|---|
| Interest and depreciation | $19,000 | $ 9,200 |
| Maintenance | 7,168 | 10,436 |
| Wages | 10,200 | 21,300 |
| Power or fuel | 24,500 | 38,500 |
| Supplies | 1,500 | 3,000 |
| Total | $62,368 | $82,436 |

Under "electric operation" the different charges cover both sub-station and train operation. There are some items which ordinarily would favor electric operation—for instance, track maintenance has been considered the same in both cases and omitted from our consideration, since in logging railway operations the greatest damage to the tracks appears to come from the swaying of the loaded cars, and not from the locomotives.

With steam operation, 84½ bbl. of oil were used per day for main line haulage for the two 125-ton freight locomotives, and two 50-ton shays, and 22.3 bbl. per day for the two 50-ton switching locomotives. In this present instance the steam locomotives are taxed to their utmost capacity while logging operations are being carried on at the near end of the timber holdings.

It will be necessary within a few years for this road to be extended approximately twelve miles further, the prevailing grade on the extended line being the same as at present, and an analysis of the future conditions will show that four locomotives operating thirteen hours each per day will be able to care for the output and the conditions will then be very much more favorable for electric operation.

(To be continued.)

## B. C. Pulp Mills Secure Australian Trade

As a direct consequence of the European war British Columbia pulp industries have secured a large part of the Australian paper supply trade, and very large shipments, running into over 1,000 tons a month, are being made to the antipodes by coast mills, according to information supplied by shipping men. So great an incentive has been given coast paper manufacturing mills by this new trade that a heavy demand has arisen for sulphur, which is extensively used in the pulp industry. British Columbia coast mills supply the paper to the entire group of Pacific Coast cities. A meagre invasion into the Australian trade had been made before the outbreak of the European war, When hostilities broke out, the supply of paper from Norway broke down owing to the high insurance rates and also to the fact that much of the carrying between Norway and Australia had been done by German vessels. Australia at once turned her eyes to the Pacific Coast and, as a result, activity in pulp mills in British Columbia increased at once.

The death is reported of Mr. H. F. Murphy, of Jas. E. Murphy & Company, lumber manufacturers, Tobermory, Ont.

# Annual Report of B.C. Forest Branch

## Emphasis Laid Upon Necessity for Seeking Out New Markets and Enlarging Old Ones—Report on Imports of Prairies from U. S.

The annual report of the Forest Branch of the Department of Lands of British Columbia, prepared by Mr. H. R. MacMillan, Chief Forester, has just been made public. The report gives extensive and important detailed information about the lumbering industry, and inasmuch as it is made public at a time when the information is fresh, it affords an example to many other government departments in Canada which are in the habit of bringing out their reports so late as to be of little value or interest. The report contains among other things the following discussion of the situation, and information about the year's operations:

Four matters made the year 1914 remarkable from the point of view of forest administration in this province. The first was the passage of the "Timber Royalty Act," which defined, for half a century ahead, the stumpage price of Crown timber; the second was the strenuous and successful struggle with one of the worst fire seasons ever experienced in the West; thirdly, in spite of the unprecedented conditions created by wars and financial depression, the forest revenue was well over $2,000,000; while, fourthly, previous conjectures as to the large amount of timber remaining in the Crown reserve were confirmed by the results of exploration.

The fire season was one of the worst in the history of the West, being comparable in most ways with that of 1910. But although there were more fires in 1914 than in any year on record, they resulted in far less damage than has occurred in many previous seasons; a gratifying result to which the efficiency of the patrol and fire-fighting system of the province undoubtedly contributed. We have only to observe the effect of weather conditions in the American States to the south of us to realize how strenuous conditions were. Over $1,600,000 was expended there upon timbered areas no larger than those of this province, and yet the cost to British Columbia did not exceed $400,000 for fire-fighting and patrol. Property damage was estimated at about the same amount.

But a portion of the province has so far been covered by the forest survey of the past three seasons, yet the merchantable timber

important duty of the Forest Branch at the present time is to assist in extending the markets for British Columbia's forest products. If the present opportunity is lost the lumber industry of this province will have a long uphill fight in establishing its position.

### The Lumbering Industry

The distribution of lumber-manufacturing plants throughout the province is as follows:—

**Saw and Shingle Mills of Province**

| District. | Sawmills Up to 15 M. Feet Daily Capacity. | Sawmills 15 to 40 M. Feet Daily Capacity. | Sawmills Over 40 M. Feet Daily Capacity. | Shingle-mills. | Total. |
|---|---|---|---|---|---|
| Cranbrook | 22 | 18 | 6 | .. | 46 |
| Fort George | 14 | 2 | .. | .. | 16 |
| Hazelton | 12 | .. | .. | .. | 12 |
| Kamloops | 15 | 4 | 1 | .. | 20 |
| Lillooet | 19 | 2 | .. | .. | 21 |
| Nelson | 20 | 6 | 6 | 5 | 37 |
| Tete Jaune Cache | .. | .. | 1 | .. | 1 |
| Vernon | 23 | 5 | 1 | .. | 29 |
| Totals, East of Cascades | 125 | 37 | 15 | 5 | 182 |
| Island | 20 | 18 | 12 | 12 | 62 |
| Vancouver | 24 | 35 | 30 | 63 | 152 |

| Totals, West of Cascades | 55 | 59 | 43 | 76 | 233 |
| Totals in Province | 180 | 96 | 58 | 81 | 415 |

The only important market developed for British Columbia during the past decade has been the Canadian Prairie. In the best of times the Canadian Prairie is a hotly contested market for lumber, as is shown by the following statement of imports from the United States during the past four years:—

| | 1911. Feet B.M. | 1911. Value. | 1911. Average per M. | 1912. Feet B.M. | 1912. Value. | 1912. Average per M. | Per Cent. Increase 1912 over 1911. | 1913. Feet B.M. | 1913. Valu | 1913. Average per M. | Per Cent. Decrease 1913 over 1912 | 1914. Feet B.M. | 1914. Value. | 1914. Average per M. | Per Cent. Decrease 1914 over 1913. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Planks, boards, etc., dressed one side. | 190,768,000 | $2,324,994 | $12.13 | 207,762,000 | $2,337,262 | $11.44 | 9 | 106,299,000 | $1,552,760 | $14.61 | 49 | 71,130,000 | $842,227 | $11.85 | 33 |

| Laths | 58,220,000 | 134,795 | 2.31 | 63,720,000 | 134,624 | 2.11 | 9 | 32,996,000 | 78,361 | 2.37 | 48 | 13,112,000 | 29,920 | 2.28 | 60 |
| Shingles | 17,206,050 | 32,781 | 1.90 | 82,887,000 | 152,402 | 1.84 | 381 | 34,003,000 | 65,153 | 1.92 | 59 | 10,456,000 | 18,112 | 1.73 | 69 |
| Totals | ..... | $2,883,436 | ..... | ..... | $3,309,958 | ..... | .. | ..... | $2,000,245 | ..... | .. | ..... | $976,261 | ..... | .. |

definitely located in the Crown reserve already reaches a considerable total. The boundaries of no less than 954,950 acres of unalienated statutory timber land have been established on the official maps of the province, without including any of the areas covered by reconnaissance during the past season. The preliminary reports concerning the latter show that an additional 30,000,000,000 feet of timber were located by our field parties in 1914; and when the full reports have been tabulated the Crown reserve will receive a further most satisfactory increase on account of unalienated timber that is included in this large stand.

The market problem confronting the lumber industry and the Government's efforts to assist in solving it, are dealt with in the following report. The first hint of war temporarily paralyzed building operations in the market supplied from the Pacific Coast. The lumber industry, which was in a weak condition following the inflation of a year ago, was brought to a dead halt. The effects are now felt in every community throughout the province by every class of the population, for this industry furnished our greatest export product, met the adverse balance of trade in every community, and provided settlers with a market for both their labor and their produce. In the majority of the villages and towns in the province prosperity will return quickest through revival of the lumber business. There is no lack of timber to cut; there is no lack of mills to cut it. It is the market that must be sought, both in Canada east of the Rockies and in the United States from the Mississippi Valley eastward, in Australia and the Orient, and to a certain extent in Europe. An aggressive campaign for the capture of these markets is now under way in the Northwestern States, lumber manufacturers and the Federal Government pushing it together. I cannot too strongly urge that the most

Further competition which cannot possibly be eliminated during the next decade is that of the Prairie spruce mills, which cut 225,000,000 feet annually, and the western Mills of Ontario, which send 50,000,000 feet a year. For several years past British Columbia has cut 1,000,000,000 feet to 1,200,000,000 feet of lumber for the Prairie trade. So acute was the building depression in 1914 that only about 700,000,000 was cut for the Prairie trade, and not all this quantity was delivered.

The situation plainly calls for general reorganization, for the mills of British Columbia have looked to the Prairie for a sufficient market during the past ten years. The output capacity for these mills is as follows:—

**Sawmills, 1914**

| Forest District. | No. of Mills. | Capacity per Ten-hour Day. | Capacity per Year of 300 Days. |
|---|---|---|---|
| Cranbrook | 46 | 1,153,200 | 345,960,000 |
| Fort George | 16 | 200,000 | 60,000,000 |
| Hazelton | 12 | 41,000 | 12,300,000 |
| Island | 50 | 1,594,000 | 478,200,000 |
| Kamloops | 20 | 683,700 | 205,010,000 |
| Lillooet | 21 | 20,000 | 6,000,000 |
| Nelson | 32 | 877,000 | 263,100,000 |
| Prince Rupert | 18 | 392,000 | 117,600,000 |
| Tete Jaune Cache | 1 | 100,000 | 30,000,000 |
| Vancouver | 89 | 3,176,000 | 952,800,000 |
| Vernon | 29 | 282,000 | 84,600,000 |
| Totals | 334 | 8,518,900 | 2,555,570,000 |

The Prairie market has never yet in any one year taken over 60 per cent. of the output of these mills; the export market has not in any one year in the past decade taken 4 per cent. of the annual output.

Manifestly the only relief which will enable the lumber industry to meet its obligations is an extension of exoprt markets.

That the lumber industry has not yet sufficiently effective salesmen in the Prairie is shown by the number of farmers still without implement-sheds. The Conservation Commission investigating this point found that the proportion of implement-sheds to farms in the different provinces was:—

| Manitoba | | Saskatchewan | | Alberta | |
|---|---|---|---|---|---|
| Farms. | Implement-sheds. | Farms. | Implement-sheds. | Farms. | Implement-sheds. |
| 94 | 14 | 94 | 21 | 92 | 55 |

### Logging Inspection

There were 926 logging operations in the province during 1914, distributed as shown below:—

| District. | Logging Operations. | Hand-loggers. |
|---|---|---|
| Cranbrook | 117 | ... |
| Fort George | 22 | ... |
| Hazelton | 13 | ... |
| Island | 102 | 1 |
| Kamloops | 47 | ... |
| Lillooet | 22 | ... |
| Nelson | 166 | ... |
| Prince Rupert | 1 | 132 |
| Vancouver | 166 | 37 |
| Vernon | 100 | ... |
| Totals | 756 | 170 |

# Increasing Use of Logging Railroads

## Efficiency of Results, Economical Cutting and Continuity of Supply Leading to its Supplanting Horses

**By E. Lisherness, C. E.**

**Written specially for the Canada Lumberman and Woodworker**

The application of the railroad for use in logging or lumbering operations is not new, and has been tried successfully in the south and west for many years. In those localities it has proven entirely satisfactory, and has displaced all other methods of operation over long distances, but in our far north and east, where there is plenty of snow, it has not as yet made its appearance to any great extent, on account of the ease with which logs are conveyed by means of horses and sleds, or in cases where the haul is of considerable length, by the loghauler, operating on the snow. Among lumbermen and others interested in timberlands, however, the question of a permanent way to develop the timberlands in a scientific manner, and handle annual operations without hazard from the weather, has been taken up, and the lumbering railroad has received considerable attention.

As long as there was plenty of timber near at hand the ordinary methods of lumbering sufficed, and there was no call for a change and very little chance for introducing new methods, but, on account of the fact that the logs and timber have been well cut off, and because of the consequent shortage and increasing value, it has been necessary to go back to the headwaters of the rivers for a supply.

The result of this, long hauls, a large loss of second grade timber, and great cost when horses were used, was considered very undesirable in the eyes of progressive business administrators and scientific foresters.

Under these conditions it became desirable to develop a means of handling all types of wood, of conserving the growth so that continuous operation could be carried on, and delivering all the logs without breakage, and at speed and cost so that profits warranting the outlay would follow.

The great value of timberlands, and the modern policy of frequent cutting, also require that permanent roads be maintained, so that it will not be necessary to construct a new road every time it is desired to make a cutting on the land, or, because of the cost of thinning, to remove the entire stand.

These permanent roads afford easy access to all parts of the forest at any time, and greatly facilitate the present fire patrol systems of the government and private owners. With these conditions in mind, a study of the logging railroad will convince the most skeptical of its value, both as a means of taking out the timber, and for use of the roadbed after the rails are removed as a means for permanent access to the land.

The first and most important point which is demanded of the logging railroad is reliability, and that this is a very particular feature of this method of transportation is easily set forth. After the road has been established, the cutting of the timber and the lumbering operations are not then dependent on the season. In fact, operations can be carried on throughout the year, and the logs handled when desired, or piled up for driving in the spring of the year. In the past, lumbering operations have been dependent, to a large extent, on the snow, and in some seasons this has failed entirely, been greatly delayed, or has come too early for satisfactory results. With the railroad however, it would be quite easy to maintain the roads so that operations may not be held up. When the road is in operation it is not easily destroyed, torn up or gotten out of condition, and it does not require a great amount of attention, in fact, not nearly as much as the average ice-made road for either horses or log-haulers.

Another very particular point in favor of the logging railroad is the fact that it can operate in almost any place, and if the logs are on another watershed it does not make the place inaccessible. These roads have been frequently used with grades up to 20 per cent., and substantial loads hauled under those conditions. As a logging road requires a width only equal to the length of the ties, about seven feet, the process of making a road in a difficult place is considerably lightened, and it can be said that any place accessible to teams can be used.

If one considers the loss of logs in hauling and driving small streams, the amount saved in these broken logs will, many times, nearly pay the cost of operation, and it is also profitable in many cases to take out other types of wood, which are valuable, but which it is not possible to drive or profitable to handle by means of teams.

When a road is located into a section, and the timber carefully cruised, it is then possible to use machines for yarding, piling and handling the wood, and in that way to get much cleaner cutting, better results from the operation, and better prospects for a future growth on the land.

As compared with either a log-hauler or a two-sled road, the width of road is so much less that the amount of timberland saved is a considerable item, for in the case of the log-hauler road it is only necessary to give sufficient room to clear the car loads properly, or less than half the amount used by the log-hauler road, while heavy falls of snow do not interfere, as the ploughing out does not take much time and it is not necessary to ice a new roadbed.

In the cheapness of operation it has a decided advantage, in that it operates at high speed, some ten or twelve miles per hour, at any time of year, and any number of hours per day, and will operate continuously if three sets of cars are used, and the unloading and loading crews have each set ready for the next trip. This high speed makes the matter of distance from the landing place immaterial, as the time consumed in the trip will not be of great account.

The cost of the equipment necessary for operation of a railroad is considerably less than that of a log-hauler, and the logs can be frequently hauled and unloaded into the water, thus saving the cost of piling on landings, and at the same time the logs are available much earlier in the season, and the interest charge against them is greatly reduced. It has been customary, on account of their availability, to drive small streams, and the cost of clearing these out, blasting ledges, building dams, sluices, etc., is very heavy, and even after these precautions are taken, the logs are frequently left stranded by falling water, or else great damage and loss is caused by throwing them into the woods by sudden extreme rises, due to heavy rains, or the going out of a dam; in fact, the hanging up of a drive for a year is of frequent occurrence from these causes. It is not possible to make any comparison of costs of a small stream drive and a railroad, because of the different conditions in every locality, but in many cases the cost of the stream improvements would build and maintain a railroad, and the cost of driving would operate it.

A very general price, deduced from the operation of roads of this type, shows that the cost of loading, repairs, hauling and maintenance of line and equipment will not exceed fifteen cents per thousand per mile. The first cost of the road is not so excessive as is often believed, on account of the cheap, rapid construction, the use of second-hand rails, and the fact that the ties are at hand, and, while conditions may differ in localities, and the character of the ground has much to do with it, it can be generally stated that three to five thousand dollars per mile of track will build a good, substantial road, ready for use, and when the operations are completed, about two-thirds of this can be salvaged for further use, or disposed of to some other operating company.

The logging railroad has also another decided advantage, in that supplies and other materials necessary for use in the woods can be hauled in, and thus save great expense in toting long distances by horses. It is also reasonable to believe that, if the operations are carried on the year around, smaller crews will be used, and consequently the greatest efficiency secured, and a considerable amount saved in the cost of building camps and other structures necessary for a big operation carried on for a few months.

In the layout of a logging railroad, considerable caution should be used in its location. Many people consider that it is necessary to use a regular railroad location engineer, and he often considers merely the grades and the cost of the construction, without considering the means of getting the timber to the road. It is well, in every case, before a road is located, to make a careful survey and estimate of the timber, and then study the location by the aid of this timber map. A road costing a slight amount more will oftentimes, in that case, operate with greater efficiency, and save many times its cost by lessened expense in handling the timber.

# St. Maurice Forest Protection Work

### Results of Year's Work Show Value of Co-operation—Government Urged to Pay Half Cost of Fire Fighting

Departing from their usual practice, the members of the St. Maurice Forest Protective Association held their annual meeting this year at Three Rivers, P.Q., instead of at Montreal. The meeting was convened for February 12, but after a discussion on the constitution it was adjourned until March 4, when the following officers were elected: Messrs. S. L. de Carteret, president; Ellwood Wilson, vice-president; J. M. Dalton, F. T. Ritchie, R. F. Grant, and Chas. Lebrun, directors; Henry Sorgius, manager and secretary-treasurer.

In his report, Mr. Henry Sorgius, stated that the membership was increased by the admittance of the Tourville Lumber Mills Company, Charlemagne & Lac Ouareau Lumber Company, William Copping, G. C. Piche, W. H. Weber, St. Gabriel Lumber Company and E. M. McLaren. The area patrolled was increased by 1,333.38 miles, or 853,363 acres. The expense of fire fighting exceeded that of previous years owing to the long spring drought. A special assessment of 1-10th of a cent. per acre was levied to cover cost of fire fighting during the past season. The cost of patrol during the past season did not exceed the general assessment of ¼ of a cent per acre.

Owing to newly acquired area the force of Inspectors was increased by two men. The mileage made by the rangers totalled 80,578 miles. The prosecution of offenders against the fire law had greatly lessened the fire evil, as had the issuing of burning permits during the prohibited season. Proof of this was shown by District No. 1 where the fires decreased from 105 in the 1913 season to 4 fires in the 1914 season. The Provincial Government was most vigorous in prosecuting claims made by the Association against offenders against the fire law.

A large percentage of the fires were caused by river drivers. It is recommended that the superintendents of the various woods operations be more definite in their instructions to their agents, foremen and all men under their supervision in regard to forest protection and fire prevention. Of the total number of fires set during the season, ten were caused by fisherman and sportsmen, the various fish and game clubs in the territory continued their good work in instructing their guides and guests regarding the protection of the forest from fire.

The non-completion of the National Transcontinental Railway forced the Association to patrol that right of way again during the past season. The section-men under the supervision of the railway contractors were the cause of needless expense and trouble. On May 10 the section-men while burning their debris along the right of way, caused fire to be set on the adjoining land, burning over a large area. When questioned as to the setting of the fire they replied that they had received orders from the road-master to burn the debris. No precaution whatsoever was taken to prevent the spreading of the fire. This was but one of many similar cases where far-reaching orders were thoughtlessly given and blindly acted upon by men of only ordinary intelligence and no knowledge of the disastrous effects resultant from carelessness or oversights on their part. As long as road-masters and others in control of right of way crews continue to give general orders regarding burning of brush, oil ties, grass, etc., without arranging for a thorough inspection as to piling and segregation before burning, so long will property adjoining the right of way be in danger of burning. Properly controlled, the section-men on any railroad could be and were of the greatest assistance in preventing fire damage on lands adjoining the right of way. It should be just as much a part of the section-men's duty to keep the right of way free from inflammable matter as to keep the track in order. Gathering and piling of debris could be done at any time and with practically no supervision once instructions were understood as to how and where to pile, but positively no burning should be done without the presence of a fire ranger or inspector responsible for the burning and whose first precaution should be to see that piles are a sufficient distance from all other inflammable matter, and that burning is done only in calm weather, preferably when the ground is damp.

The number of fires extinguished last season was 231, which were caused as follows: by children, 1; club guardian, 1; dam keepers, 1; drivers, 22; explorers, 1; fishermen, 10; Indians, 1; jobbers, 3; lightning, 2; old fires, 6; portagers, 1; railroad, 56; settlers, 80; unknown, 46. Of the number of fires 61 required extra labor at a cost of $13,002.82.

About 514 miles of portages and trails were cut and cleaned. Seven new look-out stations were erected.

Thanks of the Association were due to the Hon. Jules Allard, Minister of Lands and Forests, and Mr. W. C. J. Hall, Superintendent of the Forest Protection Branch for their generous assistance. The firm stand taken by the Government in prosecuting all persons against whom evidence could be obtained relative to disobeying the Forest Protection Law was to be highly commended.

Mr. Sorgius also mentioned the co-operation of the various parish priests in drawing attention to the importance of the Forest Protection Law. Leaflets for school children were published by the association in co-operation with the Department of Lands and Forests and the Department of Public Instruction, for distribution among the school children throughout the Province.

The following recommendations were made: That the association recommend to the Provincial Government the necessity for having settlers obtain written permits from fire-rangers at all times of the year before burning debris in their clearings; that the association continue its efforts to induce the Provincial Government to pay half the total cost of fire-fighting in place of the present fixed allowance; that more stringent orders should be given by members of the association to their men travelling in the forest as to the danger of small fires, and that they should be instructed to extinguish fires immediately on discovery; that it be recommended to the Railway Commission of Canada that all railway employees should obtain burning permits for the burning of any debris along the right of way, from the Fire Inspectors or Rangers in their respective districts; and that it be recommended to the Railway Commission of Canada to order the placing of screens in smoking car windows of all trains passing through wooded districts, during the fire season.

The financial statement showed total receipts of $32,159.60, and disbursements of $29,617.21, the balance in the bank being $2,542.39. A comparative statement of the cost of operations for the season gives the total as $28,603.50, including $3,537.22 received from the Government. The actual cost per square mile including fire-fighting and patrol work was $2.25, the cost of the Association being $1.97; this compares with $2.088 and $1.668 respectively in the previous season.

---

## Court Dismisses E. J. Rainboth's Claim

The apeal entered by E. J. Rainboth, land surveyor, Ottawa, against the judgment of the Court of Review given last June in a suit against M. J. O'Brien, railway contractor, of Renfrew, has been dismissed by the Court of King's Bench. The case was originally heard by Mr. Justice W. A. Weir, who upheld Mr. Rainboth's claim. The Court of Review reversed this, dismissing the action and the Court of King's Bench has now upheld the Court of Review's judgment. Mr. Rainboth had claimed an undivided quarter interest in timber limits valued at $2,000,000 in the Upper Ottawa district, under an alleged agreement with Mr. O'Brien in 1901. The Superior Court in 1913 upheld Mr. Rainboth's claim and ordered the defendant to give him a quarter interest, subject to certain deductions, or to pay him $500,000. The Court of King's Bench now finds that Mr. Rainboth has the application of the railways for an increase in their freight on all failed to establish any rights to a share in the limits. The Court laid special stress on the fact that during eleven years Mr. Rainboth had made no claim of any kind upon the defendant in reference to his alleged rights in the limits. His silence, they found, was strong confirmation of Mr. O'Briens version of the transaction between him and the plaintiff, that the agreement invoked had nothing to do with the limits in question. Mr. Rainboth's action was therefore dismissed, and he was condemned to pay the costs in all courts.

---

## An Interesting Legal Action

A claim for $30,000 damages against the G. T. P. Railway Company, by the Fort George Trading and Lumber Company was recently brought before Mr. Justice Clement at Vancouver. The plaintiffs, who have been operating in the Fort George district for several years, claim that during the spring and summer of 1914 they were prevented from getting out any logs by the G. T. P. Railway building a trestle bridge across the Fraser River just above their mill. Log rafts were forbidden to go down the river for fear of carrying away the bridge. The defendants claim that they left an open portion in the centre of the bridge spans to enable logs to go down the river. The plaintiffs say that this was useless because another river close by diverts the stream from one side to another according to the strength of the current from day to day. Several other companies are watching the result of this case, as a number of other cases developing out of the same situation are to be tried subsequently.

---

## North Shore Stocks Practically All Sold

An authoritative report received by the Canada Lumberman in regard to manufacturing operations on the North Shore of Georgian Bay States that practically all of the large manufacturers have sold their 1915 cuts at prices averaging about the same as the prices for the 1914 cut. The report states that the Edward Hines Lumber Company have purchased the stock of the Nesterville Lumber Company; that Mr. Geo. D. Jackson has sold all of his stock; that McFadden and Malloy have sold 12,000,000 feet to Toledo firms; that P. Shannon & Company, whose stock is cut at Brennen Harbor, have sold over 10,000,000 feet, the red pine going to Detroit and the white pine going to Tonawanda parties, and that Eddy Bros., of Blind River, have sold their cut.

# Big Alex Wouldn't Do

**An Incident From Life—By S. H. Howard**

**KITCHENER WOULD HAVE PASSED HIM BUT HE DIDN'T HAVE A CHANCE**

When the mail came into Camp Number Five of the Black Spruce Lumber Company in North Saskatchewan, there was a general hullabaloo, for the camp lay 70 miles from the railway track, and there had been no mail in there for three weeks. A cadge team had arrived with a load of oats, and the teamster had brought all the letters, post cards and newspapers that had collected in the last month. He took this mail matter into the office for distribution in the official manner by the clerk of the camp. Darkness sets in early in November, especially in the spruce. So the sawyers and the skidders were back in camp waiting with more or less patience for the cook to announce supper, when the sleigh bells anounced the arrival. The men rushing out doors, crowded around the teamster and followed him into the office, where they seemed to fill up the little log building with more than it was ever intended to hold.

"How about the war, Jerry," was the shout. "Have we trimmed them German dog-eaters yet?"

"Kitchener wants men," blurted Jerry, by way of a bulletin to his questioners, and then he tore himself loose to see after his team.

Big Alex McVey received his back copies of the Prince Albert Times and retired to his bed. The shelf on which perched one of the coal oil lamps which lit the camp, was on the wall near his upper bunk, and he could lie on the broad of his huge back and read the news very comfortably.

"Kitchener wants men," he murmured aloud, "Kitchener don't care hether they know their right foot from their left so long as they can shoot."

After supper he sat on the bench before his bunk smoking tobacco and considering the matter.

"I'll bet you I could kill a good few of them Germans—if they didn't get me first," he remarked "I've a good mind to go out to the front and enlist."

By "front" Alex meant the frontier of civilization, not the front of battle in France as described in the war despatches.

His friend George Macdonald considered the point without prejudice.

"I'll go if you will," said he.

"It's a bet," said Alex promptly.

Together presently they crossed over the camp yard to the office through the darkness, and "got their time."

The foreman was there.

"Going out, boys?" exclaimed he in surprise.

"Yep," returned Alex briefly.

"Going to enlist," added George.

"Sorry I haven't got a team going out to-morrow," said the foreman good naturedly. "It's a good 70 miles to the track, but you can stop at the company's half-way depot and put up there to-morrow night."

"I high-banked it in, and I can high-bank it out," observed Alex in the idiom of the log drive.

At three o'clock next morning the cook gave the two men breakfast before calling the camp, so that they could get an early start. They "hit the tote road" by four, each man with his "turkey" on his back. That evening about 4.30 they surprised old man Munro by walking into the depot camp. They had made the first 40-mile stage of their journey in 12 hours, walking in two inches of soft snow, and carrying packs. They left next morning at six, covered the remaining 30 miles, and caught the afternoon train for Prince Albert. Here they cashed their checks and found themselves in possession of a little more than $100 cash, each.

With creditable directness of purpose they proceeded to enlist. But they found their first difficulty. The Prince Albert contribution to the first contingent had gone to Valcartier long since, and was now in England. Recruiting for the second contingent had not begun yet.

"Let's go down to Winnipeg, and enlist there," suggested George.

"Come on," said Alex.

Down to Winnipeg they came, and they came at their own expense. Same story here. "Not ready yet. Join a militia regiment and wait round for a while."

"Let's go east, and enlist," said Alex.

So they bought tickets for Toronto, and their rolls, apparently substantial in Prince Albert, shrunk now very visibly. Three days later they appeared on the streets of Toronto, and later they found the Armouries. After a time too, they found a recruiting sergeant, and applied to enlist in the 36th Regiment, Peel. They selected this corps because it was the first one they encountered.

"Come back to-night and be examined by the doctor," said the recruiting sergeant, after specifications had been written down.

That night in one of the side rooms at the Armouries, a score of men and youths, stripped to the skin waited their turn before the doctor. City youths mostly, with overcoats thrown over their shoulders, and smooth stringy bodies. Big Alex McVey and his friend from the far northwest, stood in the line waiting too. Their red brick winter-beaten faces contrasted strangely with the snowy white of their bared bodies.

A bit of a young office clerk was up before the doctor—a boy with nicely turned limbs, smooth and small. Of brawn such as is associated with work in the open he had none, but he passed the examiner without a flaw, a fit and proper person to stop a German bullet. Beside Alex McVey who followed him, the clerkly boy recruit looked like an effeminate child.

Alex threw off his overcoat and stood naked before his appraiser. He didn't need to square his shoulders into the position of attention. His huge clavicles did that for him without conscious contraction of the muscles. His chest seemed flat below the big protruding collar bone under the red line of the weather-beaten neck, but the throat swelled out to an enormous depth by the time it reached the latitude of the heart. He was a raw-boned specimen all through, like a big young draught horse after a winter's work in the bush. There was not an ounce of fat visible on his whole carcase. For all the spareness of flesh, however, there was a tremendous indication of power in the muscles which levered those great bones. Most remarkable were his forearms—the arms of a man who works with his hands. They stood out the more prominently, those forearms, in that they were sunburned and weather beaten, brown-red like his face. His great boney wrists, and wide sinewy hands were the color of leather. Spare-ribbed, lean, huge, the North man stood there physically fit, trained, not by the artificial exercise of a few months, but by hard work in the woods, and the spartan habits of a life time.

At the command of the examining doctor he went through all the motions used to display a man's "action," with utmost docility and with the utmost ease. He expanded and contracted his broad chest, went down on his knees and rose again without disturbing his balance, or using his hands, answered all questions sharply, intelligently and to the point, and behaved generally like a man admirably in possession of all his faculties, physical and mental. His heart and lungs were sounded, his teeth examined, his eyes tested, and no fault was to be found.

The medical man paused.

"What's the matter with that toe?" he demanded suddenly. He pointed to the big toe of the right foot, upon which Big Alex was at the present moment bearing most of the weight of his 190 pounds.

"Cut it with the axe one time," returned Alex.

What makes the toe lie over inwards like that?"

"Sinew's cut, never joined up again," explained Alex. "Can't wobble it any more."

He smiled frankly, knowing the insignificance of the injury.

"Does it always lie over sideways like that?"

"Yep."

"Bother you any when you walk?"

"Not a mite."

The doctor consulted his associate officer, and looked in a book. Then he turned to Alex and shook his head.

"Can't pass you," he said.

"What's that?" asked Alex, uncertain.

"Rejected," said the doctor. "Next man."

"But Kitchener doesn't care whether a man knows his right foot from his left," objected Alex.

"Can't help it, the regulations are laid down; we can't go past the regulations," returned the medical examiner. "How long could you keep up on a march with a toe like that?"

"Well," began Alex, "I've high-banked it some. I high-banked it out and that's—"

"Next," shouted the doctor so sharply. Alex stepped aside.

George Macdonald was "next," but he gave way to the man behind him.

"What are you going to do?" he asked his friend in a low voice.

"Me for the golden West, I guess," said Alex, beginning to climb into his clothes.

"How much money you got?" enquired George.

What do I need money for?" enquired Alex. "I'm going' to walk." "I'm with you," said his old stall companion.

And together they dressed, left the British army to its fate, and took to the high bank.

# WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

## Wanted–Lumber

### Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 7-tf

### Wanted to Purchase Timber Lots

Would pay cash for good tract of mixed timber convenient to railway. Please state location, estimate and price first letter. Apply Box 167, Canada Lumberman, Toronto 6

### Poplar Wanted

150 M. Ft. 4/4 mill run for shipment in four weeks time. Box 161, Canada Lumberman, Toronto, Ont. 6

### Wanted

A quantity of Clear Maple Squares, 1⅛ in. x 1⅛ in. x 42 in. Quote prices in car load and part car load lots. Box 157, Canada Lumberman, Toronto. 6

### WANTED

For early spring shipment
10 cars 4 ft. white pine lath No. 3.
10 cars 4 ft. white pine lath No. 2.
2 cars 4 ft. white pine lath No. 1.
10 cars 4 ft. hemlock lath No. 2.
5 cars 4 ft. hemlock lath No. 1
AMERICAN LUMBER & MFG. CO.,
5-8 Pittsburg, Pa.

### Wanted To Buy

500,000 ft. 1-in. Cull Pine.
50,000 ft. 1-in. Cull Basswood
50,000 ft. 1-in. Cull Hardwood.
1,000,000 ft. 1-in. and 2-in. Hemlock.
200,000 pieces 1½-in. lath.

Apply Box 139, Canada Lumberman, Toronto. 4-7

## For Sale–Lumber

### For Sale

For shipment May 1st car lots Cheese box, Veneer. G. R. Jones, Eldorado, Ont. 6-9

### We Have a Full Stock

of Hardwood, Hemlock and White and Norway Pine Lumber, Norway and White Pine Piling, up to 60 ft. Keenan Bros., Limited, Owen Sound, Ont. 3t.f.

### Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

## Wanted–Machinery

### Wanted to Buy

24-in. second-hand rotary bed planer. Up-to-date. First-class condition. Address Box 144, Liverpool, N.S. 6

## For Sale–Machinery

### For Sale

One Whitney 50-in. scraping machine, complete with knife grinder. It has been in use about one year. Will sell on easy terms. Address

AMERICAN COMPOUND DOOR CO.,
4-7 21st and Morgan Streets, Chicago, Ill.

### 75 H. P. Steam Boiler

with usual fittings, all in splendid order. Band rip saw, Fay & Egan make, shaving exhaust double fan, with quantity of pipes, etc. Flooring matcher, with Sherman flooring boring machine, also shafting, hangers, pulleys. Also a complete saw mill, capacity about 10 M., including good building if wanted. Cheap for cash, or terms, or Hardwood lumber taken in exchange. J. S. Findlay, Owen Sound, Ont. 3-10

### Woodworking Machinery For Sale

1 No. 51 Crescent universal woodworker; 2 24-in. planers and matchers; 3 12-in. buzz planers; 1 12-in. four-side moulder; 1 No. 802 Canada Machinery Corporation shaper; 5 30-in. Ideal pedestal bandsaws; 2 No. 619 Canada Machinery Corporation saw tables; 1 36-in. double drum sander; 1 20-in. American wood scraper.

H. W. PETRIE, LTD., Toronto.

### Rebuilt Veneer Machines

We have the following rebuilt Coe veneer lathes and clippers ready for immediate shipment:

Lathe, 50-in. swing, 88-in. knife, 6-in. spindles.
Lathe, 50-in. swing, 64-in. knife, 5-in. spindles.
Lathe, 50-in. swing, 76-in. knife, 6-in. spindles.
100-in. power clipper.
64-in. foot power clipper.

These machines are decided bargains and carry the same guarantee as we give our new ones. Prices on application.

THE COE MANUFACTURING COMPANY,
23t.f. Painesville, Ohio.

## Wanted–Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

Position wanted as band saw filer, double or single cut. A1 references. Address Box 140, Canada Lumberman, Toronto. 4-7

BAND SAWYER is open for position. References will vouch for ability and habits. Address Box 159, Canada Lumberman, Toronto. 6

Inspector wants position. Fifteen years' experience in Lumber, Ties and Timber. Yard or road. Good references. Box 158. Canada Lumberman, Toronto. 6

Lath Mill Man wants position to run a lath mill by the day or per thousand. Will go anywhere. Ten years' experience. References. Box 151, Canada Lumberman, Toronto. 5-7

Position wanted as saw mill foreman or millwright. Can give best of references. Age 44. Address Box 141, Canada Lumberman. Toronto. 4-7

Mill or General Superintendent wants position. Eastern and western experience. Splendid record. References. Box 131, Canada Lumberman, Toronto. 3-7

This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

**Coal and Wood Yard**

**Lease For Sale By Tender**

Tenders will be received up to and including March 20th, 1915, for the lease of the premises, 13 Somerset Avenue, Toronto.
Sheds, buildings, etc., valued at .. $150.00
One 5-ton scales, valued at ... ... 150.00

$300.00

This yard has a frontage of 90 ft. by a depth of 132 ft., and has been operating as a coal, wood and lumber yard for a number of years.

The rent is $5.00 per month and taxes, which amount to about $150.00 per year, making a total rent of approximately $225.00 per year.

A good coal and wood business is done in the Winter, while in the past a good lumber business has been done in the Summer, mostly low grade lumber. A good location for a man with some capital.

The present lease expires two years from May 9th, 1915.

All tenders must be accompanied by a certified cheque for at least 10 per cent. of the tender, and the balance to be paid when the tender is accepted.

Possession can be had at once, or upon payment of a substantial deposit, premises will be held until the first of May.

Any further particulars will be furnished on application.

Highest or any tender not necessarily accepted.

All tenders must be submitted to W. J. McCoy, Assignee, 615 C. P. R. Building, Toronto. 5-6

## Fire Tested Wooden Structures

The forest products laboratory of the Wisconsin University, Madison, Wis., is obtaining the opinion and advice of architects, engineers, fire chiefs, fire underwriters and city engineers on their proposed test of the fire restricting properties of treated woods used in modern buildings. In the preliminary work which has been done, apparatus for determining the burning point of treated and untreated wood has been developed and data of the combustibility of small pieces of treated and untreated woods and shingles has been obtained. Tests have also been made on various fire retardent paints.

For a test it is proposed to build a room with wood finished interior trim and flooring and furnish it with combustible material to represent furniture, bookcases, etc., and build a fire in the waste paper basket which will communicate with a desk, the whole to be fitted with ordinary doors and windows which will be closed. All the contents of the room are to be totally destroyed and notes taken on the final condition of the flooring and trim. The same test is also to be made using fire retardent doors, metal sash and window casings with wire glass windows. The fire resisting qualities of untreated wooden beams and various types of stucco and clapboards are to be ascertained. To test the inflammability of shingle roofs, burning brands are to be placed on natural shingle roofs and notes taken as to the character and extent of the damage done. Full criticisms of the proposed tests are invited from parties interested in the forest products laboratory.

## Balsam Fir For Paper Pulp

That balsam fir, a tree which a few years ago was considered of little value, is now in demand for pulp wood, is the statement made by the United States Department of Agriculture in a bulletin just issued on the subject. This demand has been brought about, says the department, by the enormous expansion of the pulp industry during the past two decades, with its present consumption of three and a quarter million cords of coniferous wood and the consequent rise in the price of spruce, the wood most in demand for paper making. In addition, the Department goes on to say, balsam has begun to take the place of spruce for rough lumber, laths, and the like, as the price of the latter wood has risen.

The chief objection to the use of large amounts of balsam fir in the ground-pulp process of paper making is said to be due to the so-called pitch in the wood, which injures the felts and cylinder faces upon which the pulp is rolled out. Balsam fir does not have a resinous wood, and the material which gums up the cylinder probably comes from grinding balsam under conditions adapted to spruce wood. Yet from ten to twenty-five per cent. and possibly more of balsam can be used in ground pulp without lowering the grade of the paper produced. It is known that with balsam logs left in water over a season this drawback practically disappears.

In chemical pulp, produced through the action of acids, these acids are known to dissolve the pitch, and any amount of balsam can be used, though some claim that too much balsam in the pulp gives a paper that lacks strength, snap, and character.

At the present time, balsam fir furnishes about six or seven per cent. of the domestic coniferous wood used by the country's pulp industry. The tree itself constitutes, numerically, about twenty per cent. of the coniferous forest in northern New York and Maine, and is abundant in many parts of New Hampshire, Vermont, and in the swamps of northern Michigan, northern Wisconsin, and Minnesota. It readily reforests cut-over areas, and attains a size suitable for pulp wood in a short time.

Under present methods of cutting, balsam fir is said to be increasing in our second-growth forests at the expense of red spruce, and with the gradual decline in the supply of the latter wood the fir will become more and more important commercially.—Disston Crucible.

## Advance in Spruce Predicted

The price of spruce is in line for a material advance in the opinion of many of the leading men in the trade in Maine. An extensive operator in spruce timberlands points to the smaller supply as a potent reason for higher prices in manufactured spruce. Referring to the possibility of relief from the forests of the Pacific Coast he says: "From this time on we can expect but very little, if any, lumber from this source, owing to the very high rates paid for European freights, which is attracting everything afloat to foreign trade, so that we shall be dependent upon New England spruce for our New England markets, as what little spruce the Eastern Canadian provinces have to spare finds a ready market in Boston. This, together with the fact that the cut has been unusually light, means very much higher prices for lumber in the spring than those now prevailing. A prominent lumber operator, discussing the market on spruce, says: "Spruce is harder to get every passing year, although at present it is the principal growth in northern New England and Canada. Spruce lumber will never be cheaper than at present. The pulp and paper mills are absorbing larger areas year by year. The growth is not equal to the demand. Spruce is certain to advance in price later in the season for several reasons; the cut is light this season in the forests, owing to dull markets, and money advances to operators were difficult to secure last fall; stocks in hands of local dealers are much lighter than usual, so that when trade starts up again and all begin to buy, prices will advance several dollars a thousand feet. Visible stocks will be swept away in a few weeks."

## Wood For Raising Steam

The difference between wood and coal is considerable. Beech wood gives 8,591 b.h.u. a little more than half of the best coal. Here is a point on which popular opinion is generally wrong. Fir yields 9,063 units. Most people have an idea that the hard woods, such as beech, oak, and birch, are better than the soft wood, and that they will give a better fire than the fir and the pine. Pine gives 9,153 units. The reason why people think so is probably because the hardwoods do not give off quite so much gas as the soft woods, and so burn on the grate in the same way as anthracite coal. Oak only gives 8,316 units, straw gives 11,322. Straw is an exceedingly good fuel if it is compressed into blocks and burnt on the grate like other fuel.

American coke gives 14,400, Durham coke gives 14,582, pure carbon, like really first-class wood charcoal, gives 14,647, so that some of these cokes give nearly as much as pure carbon. This shows that carbon is the foundation on which all the fuels are based. Some are a little higher in heat value than carbon, because they contain hydrogen; some a little lower, because of the ash.

A good coal may be taken at 14,000 heat units, and some cheaper coals are not worth more than 12,000 heat units.

# Review of Current Trade Conditions

### Ontario

It is not possible under present conditions to say much that is new in connection with lumber trade conditions in Ontario. One frequently hears from manufacturers and wholesalers, that trade is improving. One also hears more frequently than usual a report to the effect that a wholesaler had the best week that he has experienced for some time. On the other hand, reports are also heard frequently that other wholesalers have had a very poor week; all indicating that although there is a moderate volume of business in progress, trade is to a great extent spotty. A growing confidence is reported, however, by retailers who are now commencing to see definite results in connection with the approaching building activities. It has become reasonably certain that there will be a fair amount of building this spring, especially in those districts in which the agricultural interests are large, as the farmers have done well during the past year and are in a position to spend money upon improvements. In the cities, the building movement is also commencing to develop and while there is nothing as yet to indicate any unexpected volume of business from this quarter, it is expected that the amount of building in the cities will be sufficient to be an important factor during the coming spring and summer. The demand from factories is none too active as yet. So soon as it does increase, however, it will mean a busy time for manufacturers and wholesalers because factory stocks in the majority of cases have been greatly reduced. It is as yet too early to expect any results from the duty which has been placed upon rough lumber imported into Canada, but Canadian lumbermen in general are expecting that this will have a good effect in bettering the demand for Canadian pine, spruce and hemlock.

There is a fair trade in the cheaper lines of hardwoods for furniture making. The high grade stocks are also in fair demand for filling up yards where stocks are badly broken. The trade in hardwood trim is also good for the man who has desired widths and lengths in 1 in. birch. The medium grade of No. one common 1 in. birch is quiet because flooring concerns are not active. Cull hardwood seems to be enjoying a good demand. It is being used for ammunition boxes which use up quite a percentage of the low grade stock and some of the better grade. So far as Canadian factories are concerned, trade is of a hand-to-mouth nature. There does not seem to be any great volume of trade in basswood, although enquiries for quotations are more numerous. Trade in elm is quiet on account of the furniture factories being at a standstill. There is a good demand for Canadian hardwoods that will take the place of chestnut for veneer cores. This seems to be a result of the duty recently imposed upon imported stocks.

### Eastern Canada

Business continues quiet and unchanged at Montreal, but the milder weather is bringing out indications of more activity. Building permits for the past month made a fairly good showing. Freight rates to Great Britain continue high and uncertain. In the Maritime Provinces trade continues actively on account of the strong export demand, but there also the high and uncertain freight rates are resulting in trouble for the shippers.

Spruce manufacturers in Maine and some sections of New Brunswick have recently experienced unfavorable weather in connection with their logging operations, which may have some effect in reducing the output. The demand for spruce from Great Britain continues exceptionally strong, but manufacturers are still obliged to refuse profitable orders because they cannot find vessels to take lumber at rates which will enable them to do the business.

At Boston there is a little better enquiry from wholesalers for eastern spruce. Prices, however, have not shown any advance, and buyers are able to secure their requirements at a base price of $23. Random spruce is selling in moderate volume, but prices are steady, the current range being 2 x 3, $21; 2 x 4, $22; 2 x 6 and 2 x 7, $20.50 to $21; 2 x 8, $22 to $22.50; 2 x 10, $23 to $24; 2 x 12, $24 to $24.50. Good random covering boards are quoted by some producers at $20, others are waiting and refusing to sell under $21. New York yards continue to buy eastern spruce with caution. The call for dimension hemlock at Boston is light and prices are unchanged. Shingles continue quiet at Boston, some producers accepting $3.30 for white cedar extras. The best makes, however, are bringing $3.45. Red cedars are selling at a wide range. Choice makes are offered at Boston at $4.37. White cedar clears are quoted at $2.80 to $2.90 and second clears are quoted at $2.50 to $2.65. Lath are quiet at Boston. The range for 1⅝ in. is $4 to $4.15 and for 1½ in. $3.65 to $3.75.

### Great Britain

Trade has been going along in a normal manner at Liverpool of late, and the volume of business is far more extensive than one would expect, considering the remarkable difficulty under which it is laboring. Uncertain tonnage, exceptionally high freight rates, and delays in transportation are all acting as drags upon the extension of business activity. Any improvement in connection with these matters will bring about a great revival in trade activity. Although many merchants would like to speculate at present, they are hesitating on account of the exceptional uncertainties which prevail. Government requirements, however, are producing an extensive and varied demand. It is becoming more difficult daily to complete contracts for forward delivery on account of the scarcity of steamer room. At Manchester, spruce is going steadily into consumption and stocks are nearing exhaustion. Holders are more firm, the latest prices advised being as follows:—3 x 7, £16 10s, 3 x 9, £17 10s, 3 x 11. £18 10s.

The spot market at London shows very little noticeable change. Dock deliveries are still considerable for this season of the year, being well ahead of last year. There are indications that the building demand is likely to increase in the near future. A small amount of forward buying is reported, the only real obstacle being the question of freights. At Foy, Morgan & Company's recent auction sale 3 x 10 first Quebec spruce brought £18, 3 x 9 third Quebec, £16 15s and £16 10s, and fourths £15 15s.

A fairly extensive trade is reported from Glasgow, numerous ex quay and ex yard transactions being reported and the price tendency being still upward. Forward dealing is restricted. Quebec shippers have recently been visiting Glasgow, but it is reported that only a small amount of contracting resulted. A few orders are reported on an f.o.b. basis for timber and deals. Spruce is in steady demand and arrivals are inadequate. Values are naturally very firm. There is also a good demand for Pacific Coast spruce and "silver pine." Shipments of these woods are quickly snapped up.

### United States

Much has been said recently regarding the domestic conditions in the United States, which point towards a widespread resumption of industrial activity, yet it must not be overlooked that the most important governing influence at present continues to be the war in Europe. For this reason the average business man is still pursuing a policy of caution in regard to committing himself upon matters of expenditure. There is no question, however, that business is improving gradually and that the early conclusion of the war would bring about sufficient activity to bear a very close resemblance to a business boom. The number of unemployed is gradually decreasing and indications are that early in the spring most of the unemployed will be back at work. In connection with the railroads the situation has improved gradually. The movement of freight is heavy. Building projects are increasing to a fair extent. Farmers have been able to meet all their obligations because of the high price they received for their products and most of them have money to spare for improvements and investments. Lumbermen are looking upon the prospects for the coming season in a much more hopeful manner. Surplus stocks at practically all the important manufacturing points have been reduced until available supplies are now practically on a par with normal demand. The most promising feature of the situation is the improvement in the demand from the railroads. Southern pine, fir and oak manufacturers are feeling the benefit of this. Railroads and car builders have been buying steadily for several weeks, and there is a general feeling that they have only just begun. In general, the yard trade continues to show caution, but is expected to develop a fair amount of activity as soon as the spring building business is well open. According to the general opinion in regard to retail yard stocks, retailers will need lumber badly in many cases when they commence to feel the demand.

Opinions differ to some extent in regard to yellow pine conditions. Heavy rains have interfered with shipments and production and have also prevented the yard trade from developing much of a demand. The winter demand for yard stock, however, shows improvement, and there is a larger proportion of rush orders than there was a short time ago. Dealers are looking for a good country trade on account of the benefit to crops resulting from abundant moisture. Manufacturers on the North Pacific Coast are more encouraged about the outlook than they were a short time ago. There is a better volume of enquiries and orders for the middle west. Hardwoods in general

View of Mills in Sarnia.

# BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

***"Rush Orders Rushed"***

## Cleveland-Sarnia Sawmills Co., Limited

**SARNIA, ONTARIO**

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

are showing an upward tendency, the demand for southern hardwoods in particular having become more extensive. Implement, furniture and automobile manufacturers are showing more interest in quotations. Northern hardwoods are commencing to show a little more activity. The input this year has been lighter than usual and dry stocks are now low.

Northern pine is commencing to show its customary spring-time activity. Shipments in Minnesota have increased and retailers are gradually coming into the market. It is reported that production has been the lightest in many years, as the logging season was cut short by soft weather at an early date. Mild weather has retarded operations of spruce manufacturers in Maine and parts of New Brunswick.

# Market Correspondence

**SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD**

## Greater Trade Activity Expected at Montreal

Montreal, March 6th (Special to the Canada Lumberman): No change in the general position of the lumber trade is to be reported. Business is slow, but as the weather shows signs of breaking up, a little more activity will no doubt be manifested in the immediate future. The winter has been a trying period for local firms, as, in addition to small orders, money has been difficult to collect and two or three big concerns have gone under. Considering conditions, building permits during the past month kept up very well. The number taken out in February was 107, of a value of $441,980, against 156 and $496,055 in the corresponding month in 1914. The total for the year to date was $645,241, compared with $905,700 in the corresponding period of 1914.

The situation as regards freights for Great Britain is still uncertain. The steamship companies cannot say as yet what tonnage will be available when navigation opens, as this will depend upon the requirements of the Admiralty. Neither can they say what will be the rates, this again depending upon the course of the war. The probability is that rates will run from 100s. to 125s. per standard, according to port, and it is understood that some space has been provisionally booked at 115s.

The new duties on lumber have created a difficulty which is perplexing several firms who purchased from United States mills prior to the budget announcement, and whose orders called for f.o.b. Montreal delivery. Local firms naturally claim that the additional 7½ per cent., which came into force before delivery was made, is payable by the sellers, who agreed to deliver the lumber at a certain price, and took all risks incidental to customs and freight. Some United States mills decline to recognize their liability, on the ground that the duty is a war tax, and as such is a purely domestic one which should in fairness be paid by the buyer. At least one firm protected itself by a clause, embodied in all the letters, which provided against such contingencies. It is to the effect that all quotations are "subject to existing freight rates when quotation is made and to existing customs regulations." The probability is that in some cases settlements will be made by sharing the duty, although it seems as if the buyers, strictly speaking, have no obligation to pay a cent.

The Montreal Lumber Association made a strong case, before the Railway Commission at Ottawa, against the proposed new schedule of railway rates. The members were unanimous in their protest against the addition of further rates, believing that the trade should not be further handicapped. The Railway Commissioners will sit in Montreal, probably in about a week's time, when the lumbermen will again be heard in opposition to the railway's proposals. The Commission will afterwards visit Toronto.

## Ottawa Trade Looking for Better Business

Ottawa, March 8 (Special to the Canada Lumberman):—As spring draws nearer the prospects are that business will be much better than many expected. The movement of medium grades of lumber to the United States from this district has increased considerably during the last two weeks and there are signs of better things. Locally there is some activity in building. The permits for last month totalled $67,500, compared with $87,000 in February, 1914, but though the decrease for February amounts to about $20,000, it is generally felt that this is small in view of the general business situation. There is no doubt that the feeling among lumbermen here is far from pessimistic, since the German attempt to tie up British shipping has proven such a failure, and the Anglo-French fleet has met with such success in the Dardanelles. In Ottawa there is no scarcity of money to loan to those who want to borrow on good security. Altogether it is safe to predict that trade will be much better this year than was thought a few months ago.

One of the features of the budget debate in the House of Commons last week was the charge made by Hon. Frank Oliver, former Minister of the Interior, to the effect that the tariff placed on lumber from the United States was the result of efforts expended by the so-called Canadian lumber combine. What the alleged "combine" is Mr. Oliver did not say. He claimed that the farmers in the West have been discriminated against in favor of the lumber trade. Mr. Oliver said in part:

"I see that the lumber combine figures quite successfully in this tariff. Lumber dressed on one side only was made free under the tariff of 1894 as a concession to the special conditions existing at that time in the prairie regions of Canada. It has been recognized as being an important benefit to the people of the western country. There have repeatedly been demands made upon the late government and this government to have that condition of free lumber removed. Today that lumber stands under a duty of seven and a half per cent.

"Lumber that costs $20 a thousand, which formerly paid $5, now pays $6.50, and lumber that costs $25 a thousand and formerly paid $6.25, now pays $8.25. If there is one organization in Canada that did not merit consideration at the hands of the government it is the lumber combine. Just how far the lumber combine will benefit by this duty I cannot say, but I find that during last year we imported, duty free, lumber to the value of $4,428,000, and that on that amount the revenue to the country will be $221,000. But we also exported nearly twenty million dollars' worth, showing that we are not dependent on imports for our supply of lumber."

The lumber trade in Ottawa are not taking this criticism seriously, but there is much indignation expressed among them that allegations of this nature, so entirely unjustified, should be made, when the truth of the matter is that, owing to the competition of imported lumber, the lumber industry in Canada, the only unprotected industry formerly, has been reduced to so low an ebb that it is questionable even if the small protection now imposed as a war revenue measure will be enough to give any effective relief.

## Barbados Market Report

S. P. Musson, Son & Company, Barbados, report under date of February 18th, as follows: Lumberstuffs.—White pine—We note the arrival of the Schr. "Evelyn" from Annapolis, with some 100 M. ft., which had been sold to arrive at $30 fer "merchantable," and $25 for "second quality," on Nova Scotian survey. Stocks are not heavy and further supplies are wanted. Spruce—The "Evelyn" also brought about 265 M. ft. This was sold to arrive some months ago at $27.50 and $21.50 respectively for "shippers" and "second quality." Since then a couple of cargoes have been sold to arrive, at $26 for "shippers," and $21 for "second quality." The market is fully supplied and further shipments are not required at the moment. Shingles—There is no improvement in the situation, both "long gaspe" and "cedar laying" are in very heavy stock with no enquiry. Shooks and wood hopps—There have been no arrivals during the fortnight of either.

## Brighter Prospects for B. C. Trade

Advices from the Pacific Coast indicate that there are good prospects for a revival in the lumber trade of the west in the near future. It is stated that the Government of France will arrange for the construction of one hundred thousand farm houses in the country which has been devastated by the war. This will be done in order to encourage food production and the speedy resumption of the usual activities of these large communities. It is stated that 150 ships will be needed to carry the lumber which the French Government is asking for, the total amount specified being 500,000,000 feet. Tenders on this quantity have already been sent from the Pacific Coast mills to Paris. Much lumber is needed at once, and it is probable that all the big mills on the Pacific Coast in Canada and the United States will receive portions of the order. It is said that many of the large mills of the Pacific States have already resumed operation on full time. It is also stated that the demands from the United States for this material have increased very greatly in recent months and that even if the war was not in progress the mills would soon all be busy. Pacific Coast authorities say that the rebuilding of Europe will give employment to the Pacific Coast mills for years to come, and that the prospect for lumber interests are very much brighter than they formerly were.

# Getting Acquainted

Is somewhat of a problem, at times, occasionally decidedly unpleasant You have probably found it so in both your buying and selling experience.

Why take a chance of having your pride, feelings or temper ruffled—stick close to your old friends, not quite the excitement may-be, but there's that peace of mind, that satisfaction in knowing that they can be depended upon.

There is no more dependable place on earth to get your Dressed Spruce, than Fenderson's—the value is in it—beautifully dressed—excellent grade—bone dry—you can bank on its being good when you place the order.
